Rational Models Of Cognition

Mike Oaksford, Nick Chater

Rational Models Of Cognition:

Rational Models of Cognition Mike Oaksford, Nick Chater, 2023 This work explores an approach to understanding the human mind that regards thinking and decision making as facilities adapted to the structure of the world It contains discussions by some of the world's leading researchers in memory and categorization **Grounds for Cognition** Radu J. Bogdan, 2014-01-02 Q Why do organisms need cognition A To get information about their environments Q Why such information A Because organisms need to guide their behaviors to goals Q Why guidance A Because it leads to goal satisfaction Q Why goals Cognition is a naturally selected response by genetic programs to the evolutionary pressure of guiding behaviors to goals Organisms are material systems that maintain and replicate themselves by engaging their world in goal directed ways This is how guidance of behavior to goal grounds and explains cognition and the main forms in which it manages information Guidance to goal also makes a difference to the understanding of human cognition Simpler forms of cognition evolve to handle fixed informational transactions with the world whereas human cognition evolves the abilities to script flexible goal situations that fit specific contexts of behavior This teleoevolutionary approach has important implications for cognitive science two of which are programmatic One is that information that guides to goal is not exclusively cognitive guidance is also affected by ecological facts and regularities as well as by design assumptions about them The other implication is that the functional analyses dominant in cognitive science and philosophy of mind are incomplete and weak They are incomplete in that they focus only on the explicitly encoded cognitive information and its behavioral consequences thus ignoring the larger guidance arrangements and weak because causal and functional relations implement but underdetermine goal directed and goal guided processes A work dealing expressly with the foundations of cognitive science this book addresses basic but seldom asked questions about the evolutionary rationale of cognition and the way this rationale has shaped the major types of cognition It also provides a teleological answer to these basic questions in terms of goal directedness and particularly guidance of behavior to goal In so doing the work defends the scientific respectability and the explanatory necessity of teleology by showing that goal directedness characterizes the work of genetic programs

Psychology of Reasoning Ken Manktelow, Man Cheung Chung, 2004-09-02 A set of specially commissioned chapters from leading international researchers in the psychology of reasoning Its purpose is to explore the historical philosophical and theoretical implications of the development of this field Rationality In An Uncertain World Nick Chater, Mike Oaksford, 2004-08-02 This book brings together an influential sequence of papers that argue for a radical re conceptualisation of the psychology of inference and of cognitive science more generally The papers demonstrate that the thesis that logic provides the basis of human inference is central to much cognitive science although the commitment to this view is often implicit They then note that almost all human inference is uncertain whereas logic is the calculus of certain inference This mismatch means that logic is not the appropriate model for human thought Oaksford and Chater's argument

draws on research in computer science artificial intelligence and philosophy of science in addition to experimental psychology The authors propose that probability theory the calculus of uncertain inference provides a more appropriate model for human thought They show how a probabilistic account can provide detailed explanations of experimental data on Wason's selection task which many have viewed as providing a paradigmatic demonstration of human irrationality Oaksford and Chater show that people's behaviour appears irrational only from a logical point of view whereas it is entirely rational from a probabilistic perspective The shift to a probabilistic framework for human inference has significant implications for the psychology of reasoning cognitive science more generally and for our picture of ourselves as rational agents

Macrocognition in Teams Dr C A P Smith, Dr Michael P Letsky, Dr Norman W Warner, Dr Stephen M Fiore, 2012-10-01 Team collaboration involves many operational tasks such as team decision making or course of action selection developing shared understanding and intelligence analysis These operational tasks must be performed in many situations often under severe time pressure with information and knowledge uncertainty large amounts of dynamic information and across different team characteristics Recent research in this area has focused on various aspects of human collaborative decision making and the underlying cognitive processes while describing those processes at different levels of detail making it difficult to compare research results The theoretical construct of macrocognition in teams was developed to facilitate cognitive research in team collaboration which will enable a common level of understanding when defining measuring and discussing the cognitive processes in team collaboration Macrocognition is defined as both the internalized and externalized mental processes employed by team members in complex one of a kind collaborative problem solving Macrocognition in Teams provides readers with a greater understanding of the macrocognitive processes which support collaborative team activity showcasing current research theories methodologies and tools It will be of direct relevance to academics researchers and practitioners interested in group team interaction performance development and training

Bayesian Rationality Mike Oaksford, Nick Chater, 2007-02-22 For almost 2 500 years the Western concept of what is to be human has been dominated by the idea that the mind is the seat of reason humans are almost by definition the rational animal In this text a more radical suggestion for explaining these puzzling aspects of human reasoning is put forward ICCM 2012 Proceedings , *The Rationality Quotient* Keith E. Stanovich, Richard F. West, Maggie E. Toplak, 2016-09-30 How to assess critical aspects of cognitive functioning that are not measured by IQ tests rational thinking skills Why are we surprised when smart people act foolishly Smart people do foolish things all the time Misjudgments and bad decisions by highly educated bankers and money managers for example brought us the financial crisis of 2008 Smart people do foolish things because intelligence is not the same as the capacity for rational thinking The Rationality Quotient explains that these two traits often and incorrectly thought of as one refer to different cognitive functions The standard IQ test the authors argue doesn't measure any of the broad components of rationality adaptive responding good judgment and good decision making The authors show that rational thinking like

intelligence is a measurable cognitive competence Drawing on theoretical work and empirical research from the last two decades they present the first prototype for an assessment of rational thinking analogous to the IQ test the CART Comprehensive Assessment of Rational Thinking The authors describe the theoretical underpinnings of the CART distinguishing the algorithmic mind from the reflective mind They discuss the logic of the tasks used to measure cognitive biases and they develop a unique typology of thinking errors The Rationality Quotient explains the components of rational thought assessed by the CART including probabilistic and scientific reasoning the avoidance of miserly information processing and the knowledge structures needed for rational thinking Finally the authors discuss studies of the CART and the social and practical implications of such a test An appendix offers sample items from the test Cognitive Unconscious and Human Rationality Laura Macchi, Maria Bagassi, Riccardo Viale, 2016-03-11 Examining the role of implicit unconscious thinking on reasoning decision making problem solving creativity and its neurocognitive basis for a genuinely psychological conception of rationality This volume contributes to a current debate within the psychology of thought that has wide implications for our ideas about creativity decision making and economic behavior The essays focus on the role of implicit unconscious thinking in creativity and problem solving the interaction of intuition and analytic thinking and the relationship between communicative heuristics and thought The analyses move beyond the conventional conception of mind informed by extra psychological theoretical models toward a genuinely psychological conception of rationality a rationality no longer limited to conscious explicit thought but able to exploit the intentional implicit level The contributors consider a new conception of human rationality that must cope with the uncertainty of the real world the implications of abandoning the normative model of classic logic and adopting a probabilistic approach instead the argumentative and linguistic aspects of reasoning and the role of implicit thought in reasoning creativity and its neurological base Contributors Maria Bagassi Linden J Ball Jean Baratgin Aron K Barbey Tilmann Betsch Eric Billaut Jean Francois Bonnefon Pierre Bonnier Shira Elqayam Keith Frankish Gerd Gigerenzer Ken Gilhooly Denis Hilton Anna Lang Stefanie Lindow Laura Macchi Hugo Mercier Giuseppe Mosconi Ian R Newman Mike Oaksford David Over Guy Politzer Johannes Ritter Steven A Sloman Edward J N Stupple Ron Sun Nicole H Theriault Valerie A Thompson Emmanuel Trouche Raymond Riccardo Viale **The Oxford Handbook of Thinking and Reasoning** Keith J. Holyoak, Robert G. Morrison, 2013-05-23 The Oxford Handbook of Thinking and Reasoning brings together the contributions of many of the leading researchers in thinking and reasoning to create the most comprehensive overview of research on thinking and reasoning that has ever been available
