past 120 years The green revolution Evolution and human psychology These subjects make today s newspaper headlines Yet much of the science underlying these topics stems from a book published nearly 140 years ago Charles Darwin s *On the Origin of Species* Far from an antique idea restricted to the nineteenth century the theory of evolution is one of the most potent concepts in all of modern science In *Darwin s Spectre* Michael Rose provides the general reader with an introduction to the theory of evolution its beginning with Darwin its key concepts and how it may affect us in the future First comes a brief biographical sketch of Darwin Next Rose gives a primer on the three most important concepts in evolutionary theory variation selection and adaptation With a firm grasp of these concepts the reader is ready to look at modern applications of evolutionary theory Discussing agriculture Rose shows how even before Darwin farmers and ranchers unknowingly experimented with evolution Medical research however has ignored Darwin s lessons until recently with potentially grave consequences Finally evolution supplies important new vantage points on human nature If humans weren t created by deities then our nature may be determined more by evolution than we have understood Or it may not be In this question as in many others the Darwinian perspective is one of the most important for understanding human affairs in the modern world *Darwin s Spectre* explains how evolutionary biology has been used to support both valuable applied research particularly in agriculture and truly frightening objectives such as Nazi eugenics Darwin s legacy has been a comfort and a scourge But it has never been irrelevant
