Software Safety and Security Tobias Nipkow, Orna Grumberg, 2012-05-15

Recent decades have seen major advances in methods and tools for checking the safety and security of software systems. Automatic tools can now detect security flaws not only in programs of the order of a million lines of code but also in high level protocol descriptions. There has also been something of a breakthrough in the area of operating system verification. This book presents the lectures from the NATO Advanced Study Institute on Tools for Analysis and Verification of Software Safety and Security, a summer school held at Bayrischzell, Germany, in 2011. This Advanced Study Institute was divided into three integrated modules: Foundations of Safety and Security, Applications of Safety Analysis, and Security Analysis. Subjects covered include mechanized game based proofs of security protocols, formal security proofs, model checking, using and building an automatic program verifier, and a hands on introduction to interactive proofs. Bringing together many leading international experts in the field, this NATO Advanced Study Institute once more proved invaluable in facilitating the connections which will influence the quality of future research and the potential to transfer research into practice. This book will be of interest to all those whose work depends on the safety and security of software systems.

Parity games, separations, and the modal μ -calculus Dittmann, Christoph, 2017-03-08 The topics of this thesis are the modal calculus and parity games The modal calculus is a common logic for model checking in computer science The model checking problem of the modal calculus is polynomial time equivalent to solving parity games a 2 player game on labeled directed graphs We present the first FPT algorithms fixed parameter tractable for the model checking problem of the modal calculus on restricted classes of graphs specifically on classes of bounded Kelly width or bounded DAG width In this process we also prove a general decomposition theorem for the modal calculus and define a useful notion of type for this logic Then assuming a class of parity games has a polynomial time algorithm solving it we consider the problem of extending this algorithm to larger classes of parity games In particular we show that joining games pasting games or adding single vertices preserves polynomial time solvability It follows that parity games can be solved in polynomial time if their underlying undirected graph is a tournament a complete bipartite graph or a block graph In the last chapter we present the first non trivial formal proof about parity games We explain a formal proof of positional determinacy of parity games in the proof assistant Isabelle HOL Die Themen dieser Dissertation sind der modale Kalkül und Paritätsspiele Der modale Kalkül ist eine häufig eingesetzte Logik im Bereich des Model Checkings in der Informatik Das Model Checking Problem des modalen Kalküls ist polynomialzeit äquivalent zum Lösen von Paritätsspielen einem 2 Spielerspiel auf beschrifteten gerichteten Graphen Wir präsentieren die ersten FPT Algorithmen fixed parameter tractable für das Model Checking Problem des modalen Kalküls auf Klassen von Graphen mit beschränkter Kelly Weite oder beschränkter DAG Weite Für diesen Zweck beweisen wir einen allgemeineren Zerlegungssatz für den modalen Kalkül und stellen eine nützliche Definition von Typen für diese Logik vor Angenommen eine Klasse von Paritätsspielen hat einen Polynomialzeit Lösungsalgorithmus betrachten wir danach das Problem diese Klassen zu erweitern auf eine Weise sodass Polynomialzeit Lösbarkeit erhalten bleibt Wir zeigen dass dies beim Join von Paritätsspielen beim Pasting und beim Hinzufügen einzelner Knoten der Fall ist Wir folgern daraus dass das Lösen von Paritätsspielen in Polynomialzeit möglich ist falls der unterliegende ungerichtete Graph ein Tournament ein vollständiger bipartiter Graph oder ein Blockgraph ist Im letzten Kapitel präsentieren wir den ersten nicht trivialen formalen Beweis über Paritätsspiele Wir stellen einen formalen Beweis für die positionale Determiniertheit von Paritätsspielen im Beweis Assistenten Isabelle HOL vor
