Groups of Self-Equivalences and Related Topics Renzo A. Piccinini, 2006-11-14 Since the subject of Groups of Self Equivalences was first discussed in 1958 in a paper of Barcuss and Barratt a good deal of progress has been achieved This is reviewed in this volume first by a long survey article and a presentation of 17 open problems together with a bibliography of the subject and by a further 14 original research articles

*Twistor Theory for Riemannian Symmetric Spaces* Francis E. Burstall, John H. Rawnsley, 2006-11-14 In this monograph on twistor theory and its applications to harmonic map theory a central theme is the interplay between the complex homogeneous geometry of flag manifolds and the real homogeneous geometry of symmetric spaces In particular flag manifolds are shown to arise as twistor spaces of Riemannian symmetric spaces Applications of this theory include a complete classification of stable harmonic 2 spheres in Riemannian symmetric spaces and a Bäcklund transform for harmonic 2 spheres in Lie groups which in many cases provides a factorisation theorem for such spheres as well as gap phenomena The main methods used are those of homogeneous geometry and Lie theory together with some algebraic geometry of Riemann surfaces The work addresses differential geometers especially those with interests in minimal surfaces and homogeneous manifolds

This book is an introduction to financial mathematics. The first part of the book studies a simple one period model which serves as a building block for later developments. Topics include the characterization of arbitrage free markets, preferences on asset profiles, an introduction to equilibrium analysis and monetary measures of risk. In the second part, the idea of dynamic hedging of contingent claims is developed in a multiperiod framework. Such models are typically incomplete. They involve intrinsic risks which cannot be hedged away completely. Topics include martingale measures, pricing formulas for derivatives, American options, superhedging and hedging strategies with minimal shortfall risk. In addition to many corrections and improvements, this second edition contains several new sections including a systematic discussion of law invariant risk measures and of the connections between American options, superhedging and dynamic risk measures. *Seminaire de Probabilites XXXV* J. Azema, M. Emery, M. Ledoux, M. Yor, 2004-10-21. Annotation: Researchers and graduate students in the theory of stochastic processes will find in this 35th volume some thirty articles on martingale theory, martingales and finance, analytical inequalities and semigroups, stochastic differential equations, functionals of Brownian motion and of Lévy processes. Ledoux's article contains a self contained introduction to the use of semigroups in spectral gaps and logarithmic Sobolev inequalities; the contribution by Emery and Schachermayer includes an exposition for probabilists of Vershik's theory of backward discrete filtrations. **Functional Analysis and Related Topics, 1991** Hikosaburo Komatsu, 2006-11-15. In these proceedings of the international conference held in Kyoto in memory of the late Professor K. Saku Yosida, twenty six invited speakers display in their many facets of functional analysis and its applications in the research tradition of Yosida's school. Many of the topics are related to linear and non linear partial differential equations including the Schrödinger equations, the Navier-Stokes equations and quasilinear hyperbolic equations. Several of the papers are survey articles, the others are original unpublished and refereed research articles. Also included is a full listing of the publications of K. Yosida. Recommended to students and research workers looking for a bird's eye view of current research activity in functional analysis and its applications. **FROM THE CONTENTS** K. Ito, Semigroups in probability theory; T. Kato, Abstract evolution equations, linear and quasilinear revisited; J. L. Lions, Remarks on systems with incompletely given initial data and incompletely given part of the boundary; H. Brezis, New energies for harmonic maps and liquid crystals; D.
