Rozovskii,1996-03-28 The study of the ocean is almost as old as the history of mankind itself When the first seafarers set out in their primitive ships they had to understand as best they could tides and currents eddies and vortices for lack of understanding often led to loss of live These primitive oceanographers were of course primarily statisticians They collected what empirical data they could and passed it down ini tially by word of mouth to their

descendants Data collection continued throughout the millenia and although data bases became larger more re liable and better codified it was not really until surprisingly recently that mankind began to try to understand the physics behind these data and shortly afterwards to attempt to model it The basic modelling tool of physical oceanography is today the partial differential equation Somehow we all know that if only we could find the right set of equations with the right initial and boundary conditions then we could solve the mysteries of ocean dynamics once and for all **Seminar on Stochastic Processes, 1985** CINLAR,CHUNG,GETOOR,1986-01-01 The 1985 Seminar on Stochastic Processes was held at the University of Florida Gainesville in March It was the fifth seminar in a continuing series of meetings which provide opportunities for researchers to discuss current work in stochastic processes in an informal atmosphere Previous seminars were held at Northwestern University Evanston and the University of Florida Gainesville The participants enthusiasm and interest have resulted in stimulating and successful seminars We thank them for it and we also thank those participants who have permitted us to publish their research here The seminar was made possible through the generous supports of the Division of Sponsored Research and the Department of Mathematics of the university of Florida and the Air Force Office of Scientific Research Grant No 82 0189 We are grateful for their support Finally the comfort and hospitality we enjoyed in Gainesville were due to the splendid efforts of Professor Zoran Pop Stojanovic J G **Séminaire de Probabilités XXXVIII** Michel Émery,Michel Ledoux,Marc Yor,2004-11-15 Besides a series of six articles on L vy processes Volume 38 of the S minaire de Probabilit s contains contributions whose topics range from analysis of semi groups to free probability via martingale theory Wiener space and Brownian motion Gaussian processes and matrices diffusions and their applications to PDEs As do all previous volumes of this series it provides an overview on the current state of the art in the research on stochastic processes *Handbook of Measure Theory* E. Theory during the period 8th 24th July 1999 We thank the authors for all the hard work they accomplished Their lectures are a work of reference in their domain The School brought together 85 participants 31 of whom gave a lecture concerning their research work At the end of this volume you will find the list of participants and their papers Finally to facilitate research concerning previous schools we give here the number of the volume of Lecture Notes where they can be found Lecture Notes in Mathematics 1975 n 539 1971 n 307 1973 n 390 1974 n 480 1979 n 876 1976 n 598 1977 n 678 1978 n 774 1980 n 929 1981 n 976 1982 n 1097 1983 n 1117 1988 n 1427 1984 n 1180 1985 1986 et 1987 n 1362 1989 n 1464 1990 n 1527 1991 n 1541 1992 n 1581 1993 n 1608 1994 n 1648 1995 n 1690 1996 n 1665 1997 n 1717 1998 n 1738 Lecture Notes in Statistics 1971 n 307 Table of Contents Part I Erwin Bolthausen Large Deviations and Interacting Random Walks 1 On the construction of the three dimensional polymer measure 7 2 Self attracting random walks 39 3 One dimensional pinning depinning transitions 105 References   High Dimensional Probability II Evarist Giné,David M. Mason,Jon A. Wellner,2012-12-06 High dimensional probability in the sense that encompasses the topics rep resented in this volume began about thirty years ago with research in two related areas limit theorems for sums of independent Banach space valued random vectors and general Gaussian processes An important feature in these past research studies has been the fact that they highlighted the es sential probabilistic nature of the problems considered In part this was because by working on a general Banach space one had to discard the extra and often extraneous structure imposed by random variables taking values in a Euclidean space or by processes being indexed by sets in R or Rd Doing this led to striking advances particularly in Gaussian process theory It also led to the creation or introduction of powerful new tools such as randomization decoupling moment and exponential inequalities chaining isoperimetry and concentration of measure which apply to areas well beyond those for which they were created The general theory of em pirical processes with its vast applications in statistics the study of local times of Markov processes certain problems in harmonic analysis and the general theory of stochastic processes are just several of the broad areas in which Gaussian process techniques and techniques from probability in Banach spaces have made a substantial impact Parallel to this work on probability in Banach spaces classical proba bility and empirical process theory were enriched by the development of powerful results in strong approximations   Selected Works Of Kai Lai Chung Elton P Hsu,Farid Aitsahlia,Ruth Williams,2008-10-22 This unique volume presents a collection of the extensive journal publications written by Kai Lai Chung over a span of 70 odd years It was produced to celebrate his 90th birthday The selection is only a subset of the many contributions that he made throughout his prolific career Another volume Chance and Choice published by World Scientific in 2004 contains yet another subset with four articles in common with this volume Kai Lai Chung s research contributions have had a major influence on several areas in probability Among his most significant works are those related to sums of independent random variables Markov chains time reversal of Markov processes probabilistic potential theory Brownian excursions and gauge theorems for the Schr dinger equation As Kai Lai Chung s contributions spawned critical

new developments this volume also contains retrospective and perspective views provided by collaborators and other authors who themselves advanced the areas of probability and mathematics   A Guide to First-Passage Processes Sidney Redner,2001-08-06 The basic theory presented in a way which emphasizes intuition problem solving and the connections with other fields   **Fractal Geometry and Stochastics** Christoph Bandt,Siegfried Graf,Martina Zähle,2013-11-27 Fractal geometry is a new and promising field for researchers from different disciplines such as mathematics physics chemistry biology and medicine It is used to model complicated natural and technical phenomena The most convincing models contain an element of randomness so that the combination of fractal geometry and stochastics arises in between these two fields It contains contributions by outstanding mathematicians and is meant to highlight the principal directions of research in the area The contributors were the main speakers attending the conference Fractal Geometry and Stochastics held at Finsterbergen Germany in June 1994 This was the first international conference ever to be held on the topic The book is addressed to mathematicians and other scientists who are interested in the mathematical theory concerning Fractal sets and measures Iterated function systems Random fractals Fractals and dynamical systems and Harmonic analysis on fractals The reader will be introduced to the most recent results in these subjects Researchers and graduate students alike will benefit from the clear expositions   Seminaire de Probabilites XXXIV J. Azema,M. Emery,M. Ledoux,M. Yor,2007-05-06 This volume contains 19 contributions to various subjects in the theory of commutative and non commutative stochastic processes It also provides a 145 page graduate course on branching and interacting particle systems with applications to non linear filtering by P del Moral and L Miclo   From Brownian Motion to Schrödinger's Equation Kai L. Chung,Zhongxin Zhao,2012-12-06 In recent years the study of the theory of Brownian motion has become a powerful tool in the solution of problems in mathematical physics This self contained and readable exposition by leading authors provides a rigorous account of the subject emphasizing the explicit rather than the concise where necessary and addressed to readers interested in probability theory as applied to analysis and mathematical physics A distinctive feature of the methods used is the ubiquitous appearance of stopping time The book contains much original research by the authors some of which published here for the first time as well as detailed and improved versions of relevant important results by other authors not easily accessible in existing literature   **Markov Processes, Gaussian Processes, and Local Times** Michael B. Marcus,Jay Rosen,2006-07-24 A readable 2006 synthesis of three main areas in the modern theory of stochastic processes
