Semistructured Database Design:

Semistructured Database Design Tok Wang Ling, Gillian Dobbie, 2004-11-19 Semistructured Database Design provides an essential reference for anyone interested in the effective management of semistructured data. Since many new and advanced web applications consume a huge amount of such data, there is a growing need to properly design efficient databases. This volume responds to that need by describing a semantically rich data model for semistructured data called Object Relationship Attribute model for Semistructured data (ORA SS). Focusing on this new model, the book discusses problems and presents solutions for a number of topics including schema extraction, the design of non-redundant storage organizations for semistructured data, and physical semistructured database design, among others. Semistructured Database Design presents researchers and professionals with the most complete and up-to-date research in this fast-growing field.

framework in this book can be used to create operational databases for transaction processing systems or for data warehouses in support of decision support systems The information manager can be a flat file Oracle Database IMS NoSQL Cassandra Hadoop or any other DBMS Usage Driven Database Design emphasizes practical aspects of design and speaks to what works what doesn't work and what to avoid at all costs Included in the book are lessons learned by the author over his 30 years in the corporate trenches Everything in the book is grounded on good theory yet demonstrates a professional and pragmatic approach to design that can come only from decades of experience Presents an end to end framework from logical data modeling through physical schema definition Includes lessons learned techniques and tricks that can turn a database disaster into a success Applies to all types of database management systems including NoSQL such as Cassandra and Hadoop and mainstream SQL databases such as Oracle and SQL Server What You'll Learn Create logical data models that accurately reflect the real world of the user Create usage scenarios reflecting how applications will use a new database Merge static data models with dynamic process models to create resilient yet flexible database designs Support application requirements by creating responsive database schemas in any database architecture Cope with big data and unstructured data for transaction processing and decision support systems Recognize when relational approaches won't work and when to turn toward NoSQL solutions such as Cassandra or Hadoop Who This Book Is For System developers including business analysts database designers database administrators and application designers and developers who must design or interact with database systems

Database and Expert Systems Applications Heinrich C. Mayr, Jiri Lazansky, Gerald Quirchmayr, Pavel Vogel, 2003-06-29 th DEXA 2001 the 12 International Conference on Database and Expert Systems Applications was held on September 3-5 2001 at the Technical University of Munich Germany The rapidly growing spectrum of database applications has led to the establishment of more specialized discussion platforms DaWaK conference EC Web conference and DEXA workshop which were all held in parallel with the DEXA conference in Munich In your hands are the results of much effort beginning with the preparation of the submitted papers The papers then passed through the reviewing process and the accepted papers were revised to final versions by their authors and arranged with the conference program All this culminated in the conference itself A total of 175 papers were submitted to this conference and I would like to thank all the authors They are the real base of the conference The program committee and the supporting reviewers produced altogether 497 referee reports on average of 2.84 reports per paper and selected 93 papers for presentation Comparing the weight or more precisely the number of papers devoted to particular topics at several recent DEXA conferences an increase can be recognized in the areas of XMS databases active databases and multi and hypermedia efforts The space devoted to the more classical topics such as information retrieval distribution and Web aspects and transaction indexing and query aspects has remained more or less unchanged Some decrease is visible for object orientation

Conceptual Modeling ER'99 Jacky Akoka, Mokrane Bouzeghoub, Isabelle Comyn-Wattiau, Elisabeth Metais, 2003-07-31. This book provides a comprehensive state of the art in conceptual modeling. It grew out of research papers presented at the 18th International Conference on Conceptual Modeling ER 99 and arranged by the editors. The plan of the conference is to cover the whole spectrum of conceptual modeling as it relates to database and information systems design and to offer a complete coverage of data and process modeling, database technology and database applications. The aim of the conference and of these proceedings is to present new insights related to each of these topics. This book contains both selected and invited papers. The 33 selected papers are organized in 11 sessions encompassing the major themes of the conference: especially schema transformation, evolution and integration, temporal database design, views and reuse in conceptual modeling, advanced conceptual modeling, business process modeling and workflows, data warehouse design. Besides the selected papers, 3 invited papers present the views of three keynote speakers internationally known for their contribution to conceptual modeling and database research and for their active role in knowledge dissemination. Peter Chen presents the results of his ongoing research on ER model, XML and the Web. Georges Gardarin presents the first results of an ESPRIT project federating various data sources with XML and XML QL. Finally, Matthias Jarke develops a way to capture and evaluate the experiences gained about process designs in so-called process data warehouses.

Current Issues in Databases and Information Systems Julius Stuller, Jaroslav Pokorný, Bernhard Thalheim, Yoshifumi Masunaga, 2003-06-29. The East European Conference on Advances in Databases and Information Systems ADBIS is the successor of the annual International Workshops with the same title that during 1993-1996 were organized in Russia by the Moscow ACM SIGMOD Chapter. Initiated in St. Petersburg, Russia, in 1997 it continued in Poznań, Poland, in 1998 and in Maribor, Slovenia, in 1999. The ADBIS Conference became the premier database and information systems conference in Eastern Europe. It intended to increase interaction and collaboration between researchers from the East and the West and to provide an internationally recognized tribune for the presentation of research results. The International Conference on Database Systems for Advanced Applications DASFAA was first held in Seoul, Korea, in 1989 to promote database research and development activities in Asian and Australasian countries. The Special Interest Group of Database Systems SIGDBS of the Information Processing Society of Japan (IPSJ) and the Special Interest Group of Database Systems SIGDB of Korea Information Science Society (KISS) had important roles in the organization of DASFAA. Since that time the DASFAA has been held every two years: Tokyo in 1991, Daejeon in 1993, Singapore in 1995, Melbourne in 1997 and Taiwan in 1999. The DASFAA became one of the most prestigious international conferences ever held in Asia or Australasia.
