Lynda Payne,2016-02-11 The practice of medicine in the days before the development of anaesthetics could often be a brutal and painful experience Many procedures especially those involving surgery must have proved almost as distressing to the doctor as to the patient Yet in order to cure the medical practitioner was often required to inflict pain and the patient to endure it Some level of detachment has always been required of the doctor and especially of the surgeon It is the construction of this detachment or dispassion in early modern England with which this work is concerned The book explores the idea of medical dispassion and shows how practitioners developed the intellectual verbal and manual skill of being able to replace passion with equanimity and distance As the skill of dispassion became more widespread it was both enthusiastically promoted and vehemently attacked by scientific and literary writers throughout the early modern period To explain why the practice was so controversial and aroused such furor this study takes into account not only patterns of medical education and clinical practice but wider debates concerning social philosophical and religious ideas **Ritual Dynamics and Religious**

**Shaw - "The Chucker Out"** Allan Chappelow, 2025-10-03 Originally published in 1969 in Shaw The Chucker Out Allan Chappelow quotes much entirely new and previously unpublished Shaw material the fruits of six years research at the British Museum and elsewhere as the basis for his aim of assisting towards a better understanding of Shaw's controversial character and his paradoxical attitude to life with reference particularly to certain fallacies and misconceptions voiced by the villagers of Ayot St Lawrence during their otherwise favourable memoirs in Shaw the Villager and shared by the world at large This book threw a flood of new light on Shaw and the world in which he lived It included new examples of Shaw's finest and noblest pronouncements as well as of his more controversial obiter dicta and a special feature is the way in which the development of Shaw's ideas is shown during his exceptionally long career occupying three quarters of a century from his first published and

unpublished writings in 1875 till his last in 1950 Here is Shaw at his most stimulating and entertaining even when deliberately shocking for effect and many of his views on stage censorship for example or on making strikes illegal were as topical and relevant in 1969 as when he propounded them In Shaw The Chucker Out the reader will find in addition to the opening chapter which presents Shaw s printed postcards and stock letter replies much new material on Shaw s attitude to peace and war on his new alphabet and his succession of Wills rare love letters and other evidence of Shaw s attitude to sex unique speeches on the art of the theatre and on the conduct of life and perhaps most important of all a most fascinating panorama of Shaw s views on the full gamut of political themes The subjects range through Socialism and Capitalism Christian Economics Democracy and Dictators Fascism and Equality of Income Sedition Trade Unionism Women in Politics and Communism The book s appeal is not only to those interested in Shaw and literature but also as a general sociological and philosophical study of the main political social and moral outlooks of the world at the time in which little known views of many of Shaw s contemporaries and critics are given as well as his own Most people are bewildered by the conflict in life between ideals and illusions and not a few have been perplexed by the contrast between the unquestionable brilliance of many of Bernard Shaw s views and the sometimes facetious statements of the clown in him Allan Chappelow skilfully sifts the wheat from the chaff as Vera Brittain points out this book goes a long way towards clarification and it seemed likely to become a standard work

**Phantom Sensation and Pain: Underlying Mechanisms and Innovative Treatments** Jack Tsao, Robert Scott Waters, Eric Lewin Altschuler, 2020-01-10 Major limb amputation affects a large number of people worldwide with estimates in the United States as high as 2 million One of the most common conditions following limb amputation is phantom limb sensation The majority of patients who have undergone traumatic limb loss also experience phantom limb pain PLP There is no consensus on potential differences in the frequency or severity of phantom pain between men and women This project is seeking out studies that look at the experience of PLP what people feel frequency and duration of PLP episodes if there is a difference in experience between men and women as well as if there is a relationship between PLP experiences and cause of amputation Although PLP has been recognized since the mid 16th century the etiology is still unknown There are several proposed mechanisms including learned paralysis cortical reorganization and proprioceptive memory It has been proposed that the mechanism of learned paralysis whereby PLP arises because the brain does not receive visual feedback that a motor movement has occurred thus creating the sensation that the limb is paralyzed Cortical reorganization theory states that areas near those corresponding to the amputated limb slowly expand into those corresponding to the amputated limb This theory has been supported by the correlation of more severe PLP with increased neural plasticity Proprioceptive memory refers to a theory that the brain remembers sensations associated with specific perceived positions of the phantom limb While many treatments for PLP have yielded little success mirror therapy MT appears to be a promising method for relieving PLP Several small scale studies have been conducted to evaluate the efficacy

of MY with most patients seeing some reduction in PLP One group performed the first randomized sham controlled study demonstrating that MT was more effective in reducing PLP in lower limb amputees compared to covered mirror therapy or mental visualization of movements The efficacy of nearly complete pain relief continued for at least 2 years after therapy The physiological reason for mirror therapy s effectiveness remains unknown but the effectiveness would correspond with the theory of cortical reorganization in that MT would reset the original reorganization present in the brain before amputation and would also support the theory of proprioceptive memories in that it could remove recall of those memories This project will discuss further investigation into the factors relating to success in MT as well as the efficacy of MT in relation to proposed mechanisms that cause PLP Discussion of other forms of novel treatment will also be included This Research Topic attempts to further explain the etiology of phantom limb pain better understand the experience of phantom limb pain and explore treatment options for phantom limb pain This project will include a review of the current understanding of phantom limb pain its causes and treatment
