Sensitivity Of Automatic Control Systems:

Sensitivity of Automatic Control Systems Efim Rosenwasser, 2000 **Sensitivity of Automatic Control Systems** Efim Rozenwasser, Rafael Yusupov, 2019-04-30 Although it arose much earlier in a variety of contexts sensitivity theory became an independent branch of science in the sixties Since then researchers from around the world have continued to make great strides in both the theory and its applications However much of the work of Russian scientific schools and specialists remain unknown in the West Sensitivity of Control Systems summarizes the results of the authors and their disciples in sensitivity theory addressing the basic notions of the theory and the problem of selecting technical parameters of systems The authors formulate problems for actual technical systems and their models and establish relations between sensitivity theory and classical stability problems They offer a significant general theory for investigating the sensitivity of boundary problems and use elements of this theory for sensitivity analysis of solutions to nonlinear programming and variational calculus problems as well as oscillatory processes The book also presents general investigation methods for discontinuous systems including those described by operator models Full of powerful new methods and results this book offers a unique opportunity for those in theoretical investigation and in the design testing and exploitation of various control systems to explore the work of Russia's leading researchers in sensitivity theory Furthermore its techniques for parametric perturbation investigation Sensitivity of Control Systems will prove useful in fields outside of control theory including oscillation theory motion dynamics and mathematical economy Trends in Advanced Intelligent Control, Optimization and Automation Wojciech Mitkowski, Janusz Kacprzyk, Krzysztof Oprzędkiewicz, Paweł Skruch, 2017-06-06 This volume contains the proceedings of the KKA 2017 the 19th Polish Control Conference organized by the Department of Automatics and Biomedical Engineering AGH University of Science and Technology in Krak w Poland on June 18-21 2017 under the auspices of the Committee on Automatic Control and Robotics of the Polish Academy of Sciences and the Commission for Engineering Sciences of the Polish Academy of Arts and Sciences Part 1 deals with general issues of modeling and control notably flow modeling and control sliding mode predictive dual etc control In turn Part 2 focuses on optimization estimation and prediction for control Part 3 is concerned with autonomous vehicles while Part 4 addresses applications Part 5 discusses computer methods in control and Part 6 examines fractional order calculus in the modeling and control of dynamic systems Part 7 focuses on modern robotics Part 8 deals with modeling and identification while Part 9 deals with problems related to security fault detection and diagnostics Part 10 explores intelligent systems in automatic control and Part 11 discusses the use of control tools and techniques in biomedical engineering Lastly Part 12 considers engineering education and teaching with regard to automatic control and robotics
