A. Hayek, 1992 In this collection of essays F A Hayek traces his intellectual roots to the Austrian school of economics and links it to the modern rebirth of classical liberal or libertarian thought     *Micro-, Meso- and Macro-Dynamics of the Brain* György Buzsáki, Yves Christen, 2016-05-02 This book brings together leading investigators who represent various aspects of brain dynamics with the goal of presenting state of the art current progress and address future developments The individual chapters cover several fascinating facets of contemporary neuroscience from elementary computation of neurons mesoscopic network oscillations internally generated assembly sequences in the service of cognition large scale neuronal interactions within and across systems the impact of sleep on cognition memory motor sensory integration spatial navigation large scale computation and consciousness Each of these topics require appropriate levels of analyses with sufficiently high temporal and spatial resolution of neuronal activity in both local and global networks supplemented by models and theories to explain how different levels of brain dynamics interact with each other and how the failure of such interactions results in neurologic and mental disease While such complex questions cannot be answered exhaustively by a dozen or so chapters this volume offers a nice synthesis of current thinking and work in progress on micro meso and macro dynamics of the brain     **The Eye of the Master** Matteo Pasquinelli, 2023-10-10 A social history of AI that finally reveals its roots in the spatial computation of industrial factories and the surveillance of collective behaviour What is AI A dominant view describes it as the quest to solve intelligence a solution supposedly to be found in the secret logic of the mind or in the deep physiology of the brain such as in its complex neural networks The Eye of the Master argues to the contrary that the inner code of AI is shaped not by the imitation of biological intelligence but the intelligence of labour and social relations as it is found in Babbage's calculating engines of the industrial age as well as in the recent algorithms for image recognition and surveillance The idea that AI may one day become autonomous or sentient as someone thought of Google's LaMDA is pure fantasy Computer algorithms have always imitated the form of social relations and the organisation of labour in their own inner structure and their purpose remains blind automation The Eye of the Master urges a new literacy on AI for scientists journalists and new generations of

activists who should recognise that the mystery of AI is just the automation of labour at the highest degree not intelligence per se
