A SCHIFFER MILITARY HISTORY BOOK

## DAY FIGHTER CAMOUFLAGE

Edited by Michael Ullman

To fully appreciate and understand the various camouflage schemes and colors displayed by the aircraft profiles in this book, the reader should have a working understanding of the complex story of Luftwaffe camouflage schemes and colors. This brief summary covers the more important aspects of the subject but in no way should be considered comprehensive. Those wishing to learn more on the subject are advised to consult the various references quoted elsewhere in this book.

### Introduction

On page 5 in both the 1958 and 1981 editions of the *Luftwaffenfarbenverzeichnis* (L.Fv.) 521/1 document, the following description clearly and neatly summarizes the Reichsluftfahrtministerium's (RLM) position on the reasons for painting aircraft:

#### *Zweck der Lackierung (Purpose of Painting)*

- a) *Flächenschutz* (Covering of aircraft construction materials against the influence of the weather, water and payload. Increases the service life of the aircraft).
- b) Making materials suitable for economical use (e.g., fabric).
- c) Influence the visibility of an aircraft.

Primarily, the RLM statements refer only to the surface protection aspects of painting, and not about the actual paints, their colors or their uses. In short, camouflage was the least important attribute of painting aircraft.

Of the almost 50 identified RLM paint colors and their variations, the RLM listed official color names for only 28, up to color 73 Grün. All numerically higher numbered colors did not have an official descriptive name. Only aircraft manufacturers such as Messerschmitt and Dornier used the names of well-known colors such as Grassgrün for their own internal purposes. For their identification purposes, the RLM used only the *Flugzeugtauglichkeitsnummer* (Aircraft Construction Material Number), e.g., 7120476 to describe a specific color.

### The Pre-War Period 1935-1939

The first Luftwaffe aircraft were painted with a surface protection application in a hue referred to as

*Wittblau* (Light Blue). These paints were spray-applied to create a soft edge between the colors. When hostilities broke out in September 1939, German fighters were painted in this dark green defensive camouflage scheme (see profiles Nos. 1 and 2). Very soon however, the combination of these dark colors were found to be too conspicuous in air-to-air combat. Consequently, the RLM issued an order in the winter of 1939-40 instructing all single-engine fighter units to limit the dark upper surface camouflage on aircraft to the extreme plan-view as seen from above. The effect of this order was that units quite simply extended the *Wittblau* coloring up the fuselage sides. At the same time new upper-surface camouflage patterns with contrasting colors emerged. The pattern consisted of a combination of Color 71 and colors 02 RLM Grün or 70/92 (see profiles Nos. 3, 4 and 5). With these changes, the German fighter pilots at last had a better and more appropriate offensive camouflage that made their aircraft harder to detect in the air.

### The Battle of Britain 1940

During the Battle of Britain, new Gray colors emerged. Most, if not all, were mixed at the unit level from German paints, but it is possible that in some cases they were created from captured stocks of French paints. A significant change to the fighter camouflage occurred in August 1940. Due to the long fights over the English Channel and coastal over water, the light-colored *Wittblau* fuselage sides were found to be too conspicuous. The remedy was to modify the fuselage sides in a wide variety of green and Gray colors. These were often sprayed on resulting in a soft mottled finish. However in some cases the colors were applied with brushes, rags or sponges (see profiles Nos. 6, 10 and 11).

### The Mid-War Period 1941-1944

During this period the Luftwaffe was operational over a vast portion of the globe, from the Arctic conditions of the North Cape to the deserts of North Africa, over both land and sea. In response to these tremendously varied climatic conditions and changing operational challenges on land, aircraft and water, the RLM was forced to provide colors and paints that would meet these demands. Once the German forces were focused on the defensive on all fronts and eventually lost command of the skies, commitment on the ground became paramount to the Luftwaffe's survival. Further, the Allied bombing offensive was beginning to cripple German industries which was manifested in severe shortages of raw materials, interrupted transportation networks, declining fuel stocks, loss of technical personnel and the like. Germany responded to this crisis by radically reorganizing and decentralizing weapons production, and reduction, simplification and substitution of manufactured components and raw materials. Thus, because of these events and responses to them, this period experienced the greatest changes and variability in the manufacturing and painting of Luftwaffe aircraft.
