Machine Learning Vol Iii An Artificial Intelligence Approach:

Machine Learning Yves Kodratoff, Ryszard S. Michalski, 2014-06-28 Machine Learning An Artificial Intelligence Approach Volume III presents a sample of machine learning research representative of the period between 1986 and 1989 The book is organized into six parts Part One introduces some general issues in the field of machine learning Part Two presents some new developments in the area of empirical learning methods such as flexible learning concepts the Protos learning apprentice system and the WITT system which implements a form of conceptual clustering Part Three gives an account of various analytical learning methods and how analytic learning can be applied to various specific problems Part Four describes efforts to integrate different learning strategies These include the UNIMEM system which empirically discovers similarities among examples and the DISCIPLE multistrategy system which is capable of learning with imperfect background knowledge Part Five provides an overview of research in the area of subsymbolic learning methods Part Six presents two types of formal approaches to machine learning The first is an improvement over Mitchell's version space method the second technique deals with the learning problem faced by a robot in an unfamiliar deterministic finite state environment

Machine Learning Ryszard S. Michalski, George Tecuci, 1994-02-09 Multistrategy learning is one of the newest and most promising research directions in the development of machine learning systems The objectives of research in this area are to study trade offs between different learning strategies and to develop learning systems that employ multiple types of inference or computational paradigms in a learning process Multistrategy systems offer significant advantages over monostategy systems They are more flexible in the type of input they can learn from and the type of knowledge they can acquire As a consequence multistrategy systems have the potential to be applicable to a wide range of practical problems This volume is the first book in this fast growing field It contains a selection of contributions by leading researchers specializing in this area See below for earlier volumes in the series

Machine Learning - EWSL-91 Yves Kodratoff, 1991-02-20 In this book contemporary knowledge of superconductivity is set against its historical background First the highlights of superconductivity research in the twentieth century are reviewed Further contributions then describe the basic phenomena resulting from the macroscopic quantum state of superconductivity such as zero resistivity the Meissner Ochsenfeld effect and flux quantization and review possible mechanisms including the classical BCS theory and the more recent alternative theories The main categories of superconductors elements intermetallic phases chalcogenides oxides and organic compounds are described Common features and differences in their structure and electronic properties are pointed out This broad overview of superconductivity is completed by a discussion of properties related to the coherence length Newcomers to the field who seek an overall picture of research in superconductivity and of the cross links between its branches will find this volume especially useful

Re-engineering for Sustainable Industrial Production Luis M. Camarinha-Matos, 2013-03-09 In today's changing world enterprises need to survive in an ever volatile competitive market environment Their success will depend on the strategies they practice and adopt Every year new ideas and concepts are emerging in order for companies to become successful enterprises Cross Border Enterprises is the new hot topic arising in the business process world at present Many terms have been coined together and are being driven in the popular business press to describe this new strategy of conducting business ie Extended Enterprise Browne et al 1995 O'Neill and Sackett 1994 Busby and Fan 1993 Caskey 1995 Virtual Enterprise Goldmann and Preiss 1991 Parunak 1994 Goranson 1995 Doumeingts et al 1995 Seamless Enterprise Harrington 1995 Inter Enterprise Networking Browne et al 1993 Dynamic Enterprise Weston 1996 and so on Many people have argued that they mean the same thing just using different words Others feel they are different But how different are they In this paper the authors will present some basic lines required from this new strategy for conducting and coordinating distributed business processes DBP as well as trying to clarify the particularities of two of the widest spread terms related to it Virtual and Extended Enterprise 2 CLUSTERS OF PRESSURES The business world currently faces an increased trend towards globalisation environmentally benign production and customisation of products and processes forcing individual enterprises to work together across the value chain in order to cope with market influences

Cognitive Electronic Warfare: An Artificial Intelligence Approach Karen Haigh, Julia Andrusenko, 2021-07-31 This comprehensive book gives an overview of how cognitive systems and artificial intelligence AI can be used in electronic warfare EW Readers will learn how EW systems respond more quickly and effectively to battlefield conditions where sophisticated radars and spectrum congestion put a high priority on EW systems that can characterize and classify novel waveforms discern intent and devise and test countermeasures Specific techniques are covered for optimizing a cognitive EW system as well as evaluating its ability to learn new information in real time The book presents AI for electronic support ES including characterization classification patterns of life and intent recognition Optimization techniques including temporal tradeoffs and distributed

optimization challenges are also discussed The issues concerning real time in mission machine learning and suggests some approaches to address this important challenge are presented and described The book covers electronic battle management data management and knowledge sharing Evaluation approaches including how to show that a machine learning system can learn how to handle novel environments are also discussed Written by experts with first hand experience in AI based EW this is the first book on in mission real time learning and optimization

Music Education: An Artificial Intelligence

Approach Matt Smith, Alan Smaill, Geraint A. Wiggins, 2013-03-09 The research fields of artificial intelligence and music and cognitive musicology are relative newcomers to the many interdisciplinary groupings based around the centre of AI and cognitive science They are concerned with the computational study and emulation of human behaviour with respect to music in many aspects and with varying degrees of emphasis on psychological plausibility Recent publications have included work in such diverse areas as rhythm and pitch perception performance composition and formal analysis Music shares with language the property of giving access to human mental behaviour in a very direct way As such it has the potential to be a very useful domain for AI work Furthermore in the course of time AI related work will surely throw light back onto some or all of the fields to which it is applied Indeed we are already beginning to feel the benefits of the application of AI techniques to music technology It is not surprising therefore that one of the first areas interest for of musical AI study is that of music education There are many ways in which an artificial intelligence or cognitive science approach to music education may be applied for example to automate tuition to explain learning processes to provide metaphors for human computer interaction and so on This collection of papers which is intended to give an impression of both the breadth and depth of the field originated from a workshop entitled Music Education An Artificial Intelligence Approach
