Manufacturing Technologies for Machines of the Future Anatoli I. Dashchenko, 2012-12-06 This is a unique edition in a new format a combination of text and video material in a book and accompanying CDs The idea to produce a work to

represent the bottom line of scientific and industrial development at the beginning of the 21st century came from leading scientists. This book undertakes analysis, description and development prognoses of machine building technologies and production automation including examples of basic research of the development and optimization of real world production processes as well as methods and results of experimental research and presentation of some of the most modern and innovative manufacturing processes which should form a basis for the automated production technologies of the future in the 21st century. This book offers an interdisciplinary presentation of unique material and combines for the first time theoretical and practical results of the last decades from the most important branches of machine building in industrial developed countries: automotive industry, agricultural machine building, electrical engineering and electronics, machine tools industry, aircraft industry, instrumental industry, control systems and consumer goods industry in a scientific technical edition. This should make this book interesting to a wide range of readers. It is aimed at those who because of their knowledge and talent will become the elite engineers of their respective countries: doctoral and undergraduate students, to young prospective and qualified engineers, to advanced beginners and well known scientists and researchers.

Advanced Machining Processes of Metallic Materials Wit Grzesik, 2008-01-22. Advanced Machining Processes of Metallic Materials updates our knowledge on the metal cutting processes in relation to theory and industrial practice. In particular many topics reflect recent developments e.g. modern tool materials, computational machining, computer simulation of various process phenomena, chip control, monitoring of the cutting state, progressive and hybrid machining operations and generation and modelling of surface integrity. This book addresses the present state and future development of machining technologies. It provides a comprehensive description of metal cutting theory, experimental and modelling techniques along with basic machining processes and their effective use in a wide range of manufacturing applications. Topics covered include fundamental physical phenomena and methods for their evaluation, available technology of machining processes for specific classes of materials and surface integrity. The book also provides strategies for optimization techniques and assessment of machinability. Moreover it describes topics not currently covered in other sources such as high performance and multitasking, complete machining with a high potential for increasing productivity and virtual and e machining. The research covered here has contributed to a more generalized vision of machining technology including not only traditional manufacturing tasks but also new potential emerging applications such as micro and nanotechnology. Many practical examples of modern machining
