Making Choices A Recasting Of Decision Theory:

Making Choices Frederic Schick,1997 **Making Choices** Frederic Schick,1997-02-13 This volume provides an introductory overview of decision theory It is completely non technical excluding all formulae from the text It covers the full range of philosophical issues of rationality and decision theory including game theory social choice theory prisoners dilemma and much else *Rational Choice and Democratic Deliberation* Guido Pincione,Fernando R. Tesón,2006-07-24 This book offers a comprehensive and sustained critique of theories of deliberative democracy **Judgment and Decision Making** Peter Juslin, Henry Montgomery,2007-09-26 Research on human judgment and decision making has been strongly guided by a normative descriptive approach according to which human decision making is compared to the normative models provided by decision theory statistics and the probability calculus A common empirical finding has been that human behavior deviates from the prescriptions by normative models that judgments and decisions are subject to cognitive biases It is interesting to note that Swedish research on judgment and decision making made an early departure from this dominating mainstream tradition albeit in two different ways The Neo Brunswikian research highlights the relationship between the laboratory task and the adaptation to a natural environment The process tracing approach attempts to identify the cognitive processes before during and after a decision This volume summarizes current Swedish research on judgment and decision making covering topics such as dynamic decision making confidence research the search for dominance structures and differentiation and social decision making **Decision Making: Social and Creative Dimensions** C.M. Allwood,M. Selart,2013-04-17 Decision making is a complex phenomenon which normally is deeply integrated into social life At the same time the decision making process often gives the decision maker an opportunity for conscious planning and for taking a reflective stance with respect to the action considered This suggests that decision making allows creative solutions with a potential to change the course of events both on an individual and a collective level Given these considerations we argue that in order to more fully understand decision making the perspectives of different disciplines are needed In this volume we have attempted to draw together contributions that would provide a broad view of decision making Much work has been carried out in the writing and editing of this volume First of all we would like to thank the contributors for their efforts in producing interesting and important texts and for their patience in the editorial process Each chapter was edited by two or three reviewers These reviewers are listed on a separate page in this book Our heartfelt thanks go to them for their time and for their incisive and constructive reviews We are also grateful to the publishing editors at Kluwer Academic Publishers Christiane Roll and Dorien Francissen who have been generous with their encouragement and patience throughout the editorial process **The Explanation of Crime** Per-Olof H. Wikström,Robert J. Sampson,2006-11-30 Integration of disciplines theories and research orientations has assumed a central role in criminological discourse yet it remains difficult to identify any concrete discoveries or significant breakthroughs for which integration has been responsible Concentrating on

three key concepts context mechanisms and development this volume aims to advance integrated scientific knowledge on crime causation by bringing together different scholarly approaches Through an analysis of the roles of behavioural contexts and individual differences in crime causation The Explanation of Crime seeks to provide a unified and focused approach to the integration of knowledge Chapter topics range from individual genetics to family environments and from ecological behaviour settings to the macro level context of communities and social systems This is a comprehensive treatment of the problem of crime causation that will appeal to graduate students and researchers in criminology and be of great interest to policy makers and practitioners in crime policy and prevention

Beyond Empiricism Joan McCord, 2017-10-19 Beyond Empiricism expands the discourse on theories of criminal behavior It considers institutional social and individual issues related to criminal behavior while individually each raises questions about the adequacy of current theoretical claims The topics have significant implications both for policy and research in criminology Per Olof Wikstrom introduces a cross level action theory of crime He suggests that better understanding of causal mechanisms can lead to a situational theory of action based on perception of alternatives and the process of choice David Wolcott and Steven Schlossman provide new perspectives on the issues of racial disparity and the incarceration of adolescents in adult prisons These authors highlight gaps in our understanding of early twentieth century juvenile justice and negate some popular claims about recent changes in the criminal law Peter Grabosky spotlights privatization policies in the criminal justice system suggesting a framework for analyzing the balance of advantage resulting from three basic forms of institutional relationships in policing Steven Messner and Richard Rosenfeld discuss why institutional analysis has been seriously underdeveloped in etiological analyses of crime Jordan Pederson and Matthew Shane scrutinize the concept of aggression Their descriptions of aggressive behavior among non human animals provide a fascinating backdrop for understanding human actions Joan McCord emphasizes the intentionality of crimes as she argues that to understand what causes crime one must have a theory about what it means to act intentionally After critically appraising prior theories McCord introduces and defends a new theory of motivation based on a post empiricist theory of language This latest volume in the distinguished Advances in Criminological Theory series continues to add to the theoretical underpinnings of the field and will be important to all collections of social science research on criminology

idea of explanation by motive and the causal force of psychological explanation In addition to argument and analysis Morton also includes more speculative explorations of topics such as moral progress and presents a new point of view on how and why cultures differ The Importance of Being Understood forges new links between ethics and the philosophy of mind and will be of interest to anyone in either field as well as developmental psychologists

The Robot's Rebellion Keith E. Stanovich, 2010-10-15 The idea that we might be robots is no longer the stuff of science fiction decades of research in evolutionary biology and cognitive science have led many esteemed scientists to the conclusion that according to the precepts of universal Darwinism humans are merely the hosts for two replicators genes and memes that have no interest in us except as conduits for replication Richard Dawkins for example jolted us into realizing that we are just survival mechanisms for our own genes sophisticated robots in service of huge colonies of replicators to whom concepts of rationality intelligence agency and even the human soul are irrelevant Accepting and now forcefully responding to this decentering and disturbing idea Keith Stanovich here provides the tools for the robot s rebellion a program of cognitive reform necessary to advance human interests over the limited interest of the replicators and define our own autonomous goals as individual human beings He shows how concepts of rational thinking from cognitive science interact with the logic of evolution to create opportunities for humans to structure their behavior to serve their own ends These evaluative activities of the brain he argues fulfill the need that we have to ascribe significance to human life We may well be robots but we are the only robots who have discovered that fact Only by recognizing ourselves as such argues Stanovich can we begin to construct a concept of self based on what is truly singular about humans that they gain control of their lives in a way unique among life forms on Earth through rational self determination

Beyond Individual Choice Michael Bacharach, 2018-06-05 Game theory is central to modern understandings of how people deal with problems of coordination and cooperation Yet ironically it cannot give a straightforward explanation of some of the simplest forms of human coordination and cooperation most famously that people can use the apparently arbitrary features of focal points to solve coordination problems and that people sometimes cooperate in prisoner s dilemmas Addressing a wide readership of economists sociologists psychologists and philosophers Michael Bacharach here proposes a revision of game theory that resolves these long standing problems In the classical tradition of game theory Bacharach models human beings as rational actors but he revises the standard definition of rationality to incorporate two major new ideas He enlarges the model of a game so that it includes the ways agents describe to themselves or frame their decision problems And he allows the possibility that people reason as members of groups or teams each taking herself to have reason to perform her component of the combination of actions that best achieves the group s common goal Bacharach shows that certain tendencies for individuals to engage in team reasoning are consistent with recent findings in social psychology and evolutionary biology As the culmination of Bacharach s long standing program of pathbreaking work on the foundations of game theory this book has been eagerly awaited Following Bacharach s premature death Natalie Gold and Robert Sugden edited the unfinished work and added two substantial chapters that allow the book to be read as a coherent whole

[Becoming oneself](#) Käthe Schneider, 2012-06-12 The basic concern of the volume is to determine the preconditions of personality development and to show their significance and their perspectives for educational science and for pedagogical practice First these basic preconditions of becoming oneself are collected in a single volume and discussed in terms of their significance for science and for educational practice In all fundamental dimensions are understood as precondition of becoming oneself Bildung is here for the first time understood as the formation of the overall individual personality which the OECD postulates to be the key qualification of the Twenty first Century From a pedagogical perspective it is a matter of furthering the personality It provides research with a new perspective in that it makes the furthering of the overall personality the object of education
