O'Neil, 1999-09-09 Carefully organized and tightly edited this insightful book considers potential causes of men s violence against women utilizing a variety of theoretical perspectives It summarizes what is known about the multiple causes of men s violence against women and the importance of identifying men s risk factors in order to prevent future violence The editors approach is unique but systematic In chapter 2 the editors present a preliminary multivariate model that explains men s violence against women by identifying four content areas macrosocietal biological gender role socialization and relation factors Within

these four areas the editors develop thirteen preliminary hypotheses about the causes of men's violence against women. In the subsequent chapters the contributing authors critique or react to specific parts of the multivariate model and address one or more of the 13 hypotheses in the presentation of their own ideas about the causes of men's violence against women. In the concluding chapter the editors summarize the contributors' reactions to the original hypotheses by creating a revised multivariate model of risk factors for men's violence against women. The final model includes biological, socialization, psychological, psychosocial, relational, and macrosocietal factors. Furthermore, the model is explained through 13 theoretical propositions, 40 research hypotheses, and over 60 risk variables related to men's violence against women. The book closes with a discussion of men's protective resiliency and vulnerability factors as well as future directions for theory development, advocacy, and the prevention of violence against women.

**Encyclopedia of Domestic Violence and Abuse** Laura L. Finley, 2013-07-16 This comprehensive two-volume work examines domestic abuse in the United States and worldwide, providing research, personal stories, and primary documents that reveal the extent of the problem. An estimated 1,300 to 1,800 Americans are murdered by intimate partners each year. Far from being a problem that only impacts women, domestic violence hurts society as a whole, both socially as well as financially, with an estimated direct and indirect cost of nearly \$6 billion annually in the United States. This book provides a timely and thorough reference for educators, students, scholars, and activists seeking to better understand the global issue of domestic abuse. The entries document the history of the domestic violence prevention movement, provide explanations for abuse, identify warning signs of hidden abuse, describe types of victims and offenders, and supply information on interventions and prevention programs. Written by an array of experts in the field, the book also integrates the personal stories of survivors and addresses abuse as a global issue by covering topics such as acid attacks and female genital mutilation.

**A Mind Of Her Own** Anne Campbell, 2013-05-16 When Darwin proposed that females shape evolution by being choosy in their choice of male suitors his Victorian contemporaries were shocked that he accorded so much importance to women But this early view of the female role was far from revolutionary They were simply allowed to be passive quality controllers of male genes Recent years have shown that the inert coy female is a myth For a male a high sex drive and a taste for variety may improve his fitness But for a female successful reproduction goes far beyond copulation She bears the brunt of parental investment with each child represents years of commitment from pregnancy and breast feeding to provisioning and guarding For her genetic lineage to survive she must do this better than her rivals Each of us comes from a line of winning mothers Women are after all the first and default sex It is women who bear children A child born with a single X chromosome can survive but not one with a single Y In a population crash a female biased population will survive far better than a male heavy one In this book Anne Campbell redresses the balance of evolutionary theory in favour of women She examines how selection pressures have shaped the female mind over thousands of generations Their emotions friendship competition aggression and mate choice She brings together data from neuroscience endocrinology anthropology primatology as well as psychology to address fundamental questions about sex differences Why are women less aggressive than men Were women designed for monogamy or promiscuity What do women compete for Why is conflict between males and females inevitable What makes each woman unique Have contraception and IVF subverted the process of natural selection **The Anatomy of Human**
