Topics in Probability and Lie Groups John Christopher Taylor, This volume is comprised of two parts the first contains articles by S N Evans F Ledrappier and Figa Talomanaca These articles arose from a Centre de Recherches de Mathematiques CRM seminar entitled Topics in Probability on Lie Groups Boundary Theory Evans gives a synthesis of his pre 1992 work on Gaussian measures on vector spaces over a local field Ledrappier uses the freegroup on d generators as a paradigm for results on the asymptotic properties of random walks and harmonic measures on the Martin boundary These articles are followed by a case study by Figa Talamanca using Gelfand pairs to study a diffusion on a compact ultrametric space The second part of the book is an appendix to the book Compactifications of Symmetric Spaces Birkhauser by Y Guivarc h and J C Taylor This appendix consists of an article by each author and presents the contents of this book in a more algebraic way L Ji and J P Anker simplifies some of their results on the asymptotics of the Green function that were used to compute Martin boundaries And Taylor gives a self contained account of Martin boundary theory for manifolds using the theory of second order strictly elliptic partial differential operators

Veblens America Sidney Plotkin, 2018-12-28 Donald Trump s astonishing rise to the US presidency challenges conventional understandings of American politics yet he is distinctively American His biography and family lineage reflect American traditions such as real estate hucksterism and buccaneering salesmanship But Trump s pugnacity also reflects the shadow of other darker American traditions of misogyny racism and xenophobia patterns that formed what Thorstein Veblen called a sclerosis of the American soul Using Veblen s theory of American development to explore the

nation's curious fusion of barbarism and liberal democracy Veblen's America taps the rich vein of the sociologist's early twentieth century insights to shed light on the Trump phenomenon that has overwhelmed and threatened early twenty first century American democracy

Children in Opera Andrew Sutherland, 2020-12-03 This book provides a musicological investigation into operas that include children Just over 100 works have been selected here for an in depth discussion of the composer the children and the productions and around 250 relevant works from around the world are also referenced Four composers to have most significantly proliferated the medium are discussed in even greater detail Cui Benjamin Britten Gian Carlo Menotti and Peter Maxwell Davies Since opera began it has been inextricably linked to society by reflecting and shaping our culture through music and narrative and as a result children have been involved Despite the contribution they played for several centuries their importance was overlooked By tracing the development of children's participation in opera this book uncovers the changing attitudes of composers towards them and how this was reflected in the wider society From the early productions of the seventeenth century to those of the twenty first century the operatic children's role has undergone a fundamental change It almost seems that contemporary composers of operas view the inclusion of children in some way as ubiquitous The rise of the children's opera chorus and the explosion of children's only productions attest to the changing view of the value they can bring to the art Some of the children to have characterised these roles are discussed in this book in order to redress the disproportionate lack of acknowledgement they often received for their performances
