towards the design of user centred intelligent systems It seeks to explore the potential of incorporating factors grounded in psychological theory into adaptive intelligent routines mechanisms technologies and innovations It highlights models methods and tools that are emerging from their convergence along with challenges and lessons learned Special emphasis is placed on promoting original insights and paradigms with respect to latest technologies current research trends and innovation directions e g incorporating variables derived from psychological theory and individual differences in adaptive intelligent systems so as to increase explainability fairness and transparency and decrease bias during interactions while the control remains with the user

Integration of Process Knowledge into Design Support Systems Hubert Kals,Fred van Houten,2013-04-17 Design is a fundamental creative human activity This certainly applies to the design of artefacts the realisation of which has to meet many constraints and ever raising criteria The world in which we live today is enormously influenced by the human race Over the last century these artefacts have dramatically changed the living conditions of humans The present wealth in very large parts of the world depends on it All the ideas for better and new artefacts brought forward by humans have gone through the minds of designers who have turned them into feasible concepts and subsequently transformed them into realistic product models The designers have been still are and will remain the leading change agents in the physical world Manufacturability of artefacts has always played a significant role in design In pre industrial manufacturing the blacksmith held the many design and realisation aspects of a product in one hand The synthesis of the design and manufacturing aspects took almost implicitly place in the head of the man All the knowledge and the skills were stored in one person Education and training took place along the line of many years of apprenticeship When the production volumes increased assembling to measure was no longer tolerated and production efficiency became essential design process planning production planning and fabrication became separated concerns The designers created their own world separated from the production world They argued that restrictions in the freedom of designing would badly influence their creativity in design

Decision-Making Support Systems: Achievements and Challenges for the New Decade Mora, Manuel,Forgionne, Guisseppi A.,Gupta, Jatinder N. D.,2002-07-01 Annotation The book presents state of the art knowledge about decision making support systems DMSS Its main goals are to provide a compendium of quality chapters on decision making support systems that help diffuse scarce knowledge about effective methods and strategies for successfully designing developing implementing and evaluating decision making support systems and to create an awareness among readers about the relevance of decision making support systems in the current complex and dynamic management environment

Algorithms in Ambient Intelligence W. Verhaegh,Emile Aarts,Jan Korst,2013-03-09 The advent of the digital era the Internet and the development of fast computing devices that can access mass storage servers at high communication bandwidths have brought within our reach the world of ambient intelligent systems These systems provide users with information communication and entertainment at any desired place and time Since its introduction in 1998 the vision of

Ambient Intelligence has attracted much attention within the research community. Especially the need for intelligence generated by smart algorithms which run on digital platforms that are integrated into consumer electronics devices has strengthened the interest in Computational Intelligence. This newly developing research field which can be positioned at the intersection of computer science, discrete mathematics and artificial intelligence contains a large variety of interesting topics including machine learning, content management, vision, speech, data mining, content augmentation, profiling, contextual awareness, feature extraction, resource management, security and privacy.

Research and Advanced Technology for Digital Libraries Christos Nikolaou, Constantine Stephanidis, 2003-07-31. Digital Libraries are complex and advanced forms of information systems which extend and augment their physical counterparts by amplifying existing resources and services and enabling development of new kinds of human problem solving and expression. Their complexity arises from the data-rich domain of discourse as well as from extended demands for multi-disciplinary input involving distributed systems, architectures, structured digital documents, collaboration support, human computer interaction, information filtering, etc. In addition to the broad range of technical issues, ethics and intellectual property rights add to the complication that is normally associated with the development, maintenance and use of Digital Libraries. The Second European Conference on Digital Libraries (ECDL 98) builds upon the success of the first of this series of European Conferences on Research and Advanced Technology for Digital Libraries held last year in Pisa, Italy, September 1-3, 1997. This series of conferences is partially funded by the TMR Programme of the European Commission and is actively supported and promoted by the European Research Consortium on Informatics and Mathematics (ERCIM). The aim is to bring together the different communities involved in the development of Digital Libraries to review progress and to discuss strategies, research and technological development (RTD) issues as well as specific topics related to the European context. These communities

include professionals from universities research centres industry government agencies public libraries etc

Information, Organisation and Technology Kecheng Liu,Rodney J. Clarke,Peter Bøgh Andersen,Ronald K. Stamper,2012-12-06 Organisational semiotics is a discipline that is concerned with the interrelationships between individuals and groups and between humans and technology functioning in organisations and society Organisational semiotics opens up the prospect of theory building and the development of new methods and techniques to gain insights into organised behaviour and enacted social practices in the presence and absence of various technologies It shares common interests with many other approaches to information and organisations such as computer science computational semiotics organisational engineering and language action perspective The common vision shared by these approaches is to treat organisations and related information systems and technologies within a unified semiotic framework with particular reference to the huge range of issues that elude many traditional disciplines The analysis and design of information systems develops methods for solving the practical problems but offers no rigorous theoretical foundation for them or how information functions within and between organisations The semiotic perspective accommodates the individual and the social the human and the technical intra and inter organisational interactions at a level of detail that is required in the study modelling design and engineering of new and alternative organisational and technical systems This perspective is outlined in the chapter presentations of Information Organisation and Technology
