Duggal, Ramesh Sharma, 2003 This volume covers material presented by invited speakers at the AMS special session on Riemannian and Lorentzian geometries held at the annual Joint Mathematics Meetings in Baltimore Topics covered include classification of curvature related operators curvature homogeneous Einstein 4 manifolds linear stability instability singularity and hyperbolic operators of spacetimes spectral geometry of holomorphic manifolds cut loci of nilpotent Lie groups conformal geometry of almost Hermitian manifolds and also submanifolds of complex and contact spaces This volume can serve as a good reference source and provide indications for further research It is suitable for graduate students and research mathematicians interested in differential geometry

Bilinear Integrable Systems: from Classical to Quantum, Continuous to Discrete L D Faddeev, Pierre Van Moerbeke, Franklin Lambert, 2006-05-31 On April 29 1814 Napoleon landed on the island of Elba surrounded with a personal army of 1200 men The allies Russia Prussia England and Austria had forced him into exile after a number of very costly defeats he was deprived of all his titles

but could keep the title of Emperor of Elba History tells us that each morning he took long walks in the sun reviewed his army each midday and discussed world matters with newly appointed advisors following the same pattern everyday to the great surprise of Campbell the British of course who was to keep an eye on him All this made everyone believe he was settled there for good Napoleon once said Elba is beautiful but a bit small Elba was definitely a source of inspiration indeed the early morning March 6 1815 Metternich the chancellor of Austria was woken up by one of his aides with the stunning news that Napoleon had left Elba with his 1200 men and was marching to Paris with little resistance A few days later he took up his throne again in the Tuileries In spite of his insatiable hunger for battles and expansion he is remembered as an important statesman He was a pioneer in setting up much of the legal administrative and political machinery in large parts of continental Europe We gathered here in a lovely and quaint shing port Marciana Marina on the island of Elba

comprehensive account of the variety of approaches to such an important and complex concept as Integrability Developing mathematical models physicists often raise the following questions whether the model obtained is integrable or close in some sense to an integrable one and whether it can be studied in depth analytically In this book we have tried to create a

mathematical framework to address these issues and we give descriptions of methods and review results In the Introduction we give a historical account of the birth and development of the theory of integrable equations focusing on the main issue of the book the concept of integrability itself A universal definition of Integrability is proving to be elusive despite more than 40 years of its development Often such notions as act solvability or regular behaviour of solutions are associated with integrable systems Unfortunately these notions do not lead to any rigorous mathematical definition A constructive approach could be based upon the study of hidden and rich algebraic or analytic structures associated with integrable equations The requirement of existence of elements of these structures could in principle be taken as a definition for integrability It is astonishing that the final result is not sensitive to the choice of the structure taken eventually we arrive at the same pattern of equations

Combinatorial and Geometric Representation Theory Seok-Jin Kang, Kyu-Hwan Lee, 2003 This volume presents the proceedings of the international conference on Combinatorial and Geometric Representation Theory In the field of representation theory a wide variety of mathematical ideas are providing new insights giving powerful methods for understanding the theory and presenting various applications to other branches of mathematics Over the past two decades there have been remarkable developments This book explains the strong connections between combinatorics geometry and representation theory It is suitable for graduate students and researchers interested in representation theory
