(AM-100), Volume 100 John Erik Fornæss, 2016-03-02 A classic treatment of complex variables from the acclaimed Annals of Mathematics Studies series Princeton University Press is proud to have published the Annals of Mathematics Studies since 1940 One of the oldest and most respected series in science publishing it has included many of the most important and influential mathematical works of the twentieth century The series continues this tradition as Princeton University Press publishes the major works of the twenty first century To mark the continued success of the series all books are available in paperback and as ebooks

The Geometric Theory of Complex Variables Peter V. Doherty, Steven G. Krantz, 2025-01-28 This book provides the reader with a broad introduction to the geometric methodology in complex analysis It covers both single and several complex variables creating a dialogue between the two viewpoints Regarded as one of the grand old ladies of modern mathematics complex analysis traces its roots back 500 years The subject began to flourish with Carl Friedrich Gauss's thesis around 1800 The geometric aspects of the theory can be traced back to the Riemann mapping theorem around 1850 with a significant milestone achieved in 1938 with Lars Ahlfors's geometrization of complex analysis These ideas inspired many other mathematicians to adopt this perspective leading to the proliferation of geometric theory of complex variables in various directions including Riemann surfaces Teichmüller theory complex manifolds extremal problems and many others This book explores all these areas with classical geometric function theory as its main focus Its accessible and gentle approach makes it suitable for advanced undergraduate and graduate students seeking to understand the connections among topics usually scattered across numerous textbooks as well as experienced mathematicians with an interest in this rich field

Lectures on the L^2 -Sobolev Theory of the $\bar{\partial}$ -Neumann Problem Emil J. Straube, 2010 This book provides a thorough and self-contained introduction to the $\bar{\partial}$ partial Neumann problem leading up to current research in the context of the mathematical L^2 Sobolev theory on bounded pseudoconvex domains in $\mathbb{C}^n$ It grew out of courses for advanced graduate students and young researchers given by the author at the Erwin Schrödinger International Institute for Mathematical Physics and at Texas A M University The introductory chapter provides an overview of the contents and puts them in historical perspective The second chapter presents the basic mathematical L^2 theory Following is a chapter on the subelliptic estimates on strictly

pseudoconvex domains The two final chapters on compactness and on regularity in Sobolev spaces bring the reader to the frontiers of research Prerequisites are a solid background in basic complex and functional analysis including the elementary mathematical L^2 Sobolev theory and distributions Some knowledge in several complex variables is helpful Concerning partial differential equations not much is assumed The elliptic regularity of the Dirichlet problem for the Laplacian is quoted a few times but the ellipticity results needed for elliptic regularization in the third chapter are proved from scratch **Recent**

Dynamical Systems Nessim Sibony, Dierk Schleicher, Dinh Tien Cuong, Marco Brunella, Eric Bedford, Marco

Abate, 2010-07-31 The theory of holomorphic dynamical systems is a subject of increasing interest in mathematics both for its challenging problems and for its connections with other branches of pure and applied mathematics A holomorphic dynamical system is the datum of a complex variety and a holomorphic object such as a self map or a vector field acting on it The study of a holomorphic dynamical system consists in describing the asymptotic behavior of the system associating it with some invariant objects easy to compute which describe the dynamics and classify the possible holomorphic dynamical systems supported by a given manifold The behavior of a holomorphic dynamical system is pretty much related to the geometry of the ambient manifold for instance parabolic manifolds do not admit chaotic behavior while projective manifolds have a variety of different chaotic pictures The techniques used to tackle such problems are of various kinds complex analysis methods of real analysis pluripotential theory algebraic geometry differential geometry topology To cover all the possible points of view of the subject in a unique occasion has become almost impossible and the CIME session in Cetraro on Holomorphic Dynamical Systems was not an exception Invariant Distances and Metrics in Complex Analysis Marek Jarnicki, Peter

Pflug, 2013-06-26 As in the field of Invariant Distances and Metrics in Complex Analysis there was and is a continuous progress this is now the second extended edition of the corresponding monograph This comprehensive book is about the study of invariant pseudodistances non negative functions on pairs of points and pseudometrics non negative functions on the tangent bundle in several complex variables It is an overview over a highly active research area at the borderline between complex analysis functional analysis and differential geometry New chapters are covering the Wu Bergman and several other metrics The book considers only domains in $\mathbb{C}^n$ and assumes a basic knowledge of several complex variables It is a valuable reference work for the expert but is also accessible to readers who are knowledgeable about several complex variables Each

chapter starts with a brief summary of its contents and continues with a short introduction It ends with an Exercises and a List of problems section that gathers all the problems from the chapter The authors have been highly successful in giving a rigorous but readable account of the main lines of development in this area

Advances in Analysis Charles Fefferman, Alexandru D. Ionescu, D.H. Phong, Stephen Wainger, 2014-01-05 Princeton University s Elias Stein was the first mathematician to see the profound interconnections that tie classical Fourier analysis to several complex variables and representation theory His fundamental contributions include the Kunze Stein phenomenon the construction of new representations the Stein interpolation theorem the idea of a restriction theorem for the Fourier transform and the theory of Hp Spaces in several variables Through his great discoveries through books that have set the highest standard for mathematical exposition and through his influence on his many collaborators and students Stein has changed mathematics Drawing inspiration from Stein s contributions to harmonic analysis and related topics this volume gathers papers from internationally renowned mathematicians many of whom have been Stein s students The book also includes expository papers on Stein s work and its influence The contributors are Jean Bourgain Luis Caffarelli Michael Christ Guy David Charles Fefferman Alexandru D Ionescu David Jerison Carlos Kenig Sergiu Klainerman Loredana Lanzani Sanghyuk Lee Lionel Levine Akos Magyar Detlef M ller Camil Muscalu Alexander Nagel D H Phong Malabika Pramanik Andrew S Raich Fulvio Ricci Keith M Rogers Andreas Seeger Scott Sheffield Luis Silvestre Christopher D Sogge Jacob Sturm Terence Tao Christoph Thiele Stephen Wainger and Steven Zelditch

Nevanlinna Theory And Its Relation To Diophantine Approximation (Second Edition) Min Ru, 2021-03-10 This book describes the theories and developments in Nevanlinna theory and Diophantine approximation Although these two subjects belong to the different areas one in complex analysis and one in number theory it has been discovered that a number of striking similarities exist between these two subjects A growing understanding of these connections has led to significant advances in both fields Outstanding conjectures from decades ago are being solved Over the past 20 years since the first edition appeared there have been many new and significant developments The new edition greatly expands the materials In addition three new chapters were added In particular the theory of algebraic curves as well as the algebraic hyperbolicity which provided the motivation for the Nevanlinna theory

Representations of Algebraic Groups, Quantum Groups, and Lie Algebras Georgia Benkart, 2006 Covers various aspects of the representation theory of Lie algebras finite groups of Lie types Hecke algebras and Lie super algebras This book outlines connections among irreducible representations of certain blocks of reduced enveloping algebras of semi simple Lie algebras in positive characteristic

Beijing Lectures in Harmonic Analysis. (AM-112), Volume 112 Elias M. Stein, 2016-03-02 Based on seven lecture series given by leading experts at a summer school at Peking University in Beijing in 1984 this book surveys recent developments in the areas of harmonic analysis most closely related to the theory of singular integrals real variable methods and applications to several complex variables and partial differential equations The different lecture series are closely interrelated each

contains a substantial amount of background material as well as new results not previously published The contributors to the volume are R R Coifman and Yves Meyer Robert Fefferman Carlos Kenig Steven G Krantz Alexander Nagel E M Stein and Stephen Wainger

The Bochner-Martinelli Integral and Its Applications Alexander M. Kytmanov, 2012-12-06 The Bochner Martinelli integral representation for holomorphic functions of several complex variables which has already become classical appeared in the works of Martinelli and Bochner at the beginning of the 1940s It was the first essentially multidimensional representation in which the integration takes place over the whole boundary of the domain This integral representation has a universal kernel not depending on the form of the domain like the Cauchy kernel in $\mathbb{C}^n$ However in $\mathbb{C}^n$ when $n > 1$ the Bochner Martinelli kernel is harmonic but not holomorphic For a long time this circumstance prevented the wide application of the Bochner Martinelli integral in multidimensional complex analysis Martinelli and Bochner used their representation to prove the theorem of Hartogs Osgood Brown on removability of compact singularities of holomorphic functions in $\mathbb{C}^n$ when $n > 1$ In the 1950s and 1960s only isolated works appeared that studied the boundary behavior of Bochner Martinelli type integrals by analogy with Cauchy type integrals This study was based on the Bochner Martinelli integral being the sum of a double layer potential and the tangential derivative of a single layer potential Therefore the Bochner Martinelli integral has a jump that agrees with the integrand but it behaves like the Cauchy integral under approach to the boundary that is somewhat worse than the double layer potential Thus the Bochner Martinelli integral combines properties of the Cauchy integral and the double layer potential

Minimal Surfaces through Nevanlinna Theory

Min Ru, 2023-05-08. The study of minimal surfaces is an important subject in differential geometry and Nevanlinna theory is an important subject in complex analysis and complex geometry. This book discusses the interaction between these two subjects. In particular, it describes the study of the value distribution properties of the Gauss map of minimal surfaces through Nevanlinna theory, a project initiated by the prominent differential geometers Shiing Shen Chern and Robert Osserman.
