Remedial Processes For Contaminated Land

Colin Bayliss, Kevin Langley

Remedial Processes For Contaminated Land:

Remedial Processes for Contaminated Land Malcolm Pratt, Institution of Chemical Engineers (Great Britain), 1993

Cleaning up land which has been contaminated by earlier industrial activity is a matter of major interest. Seven leading authorities in the UK, USA and Europe contribute chapters on the technology currently available on costs and legislation and on likely future developments. Contaminated Land Mary R. Harris, Sue Herbert, 1994. This guide addresses the topics of investigation, assessment and remediation of contamination in the context of current thinking on how best to deal with the issues surrounding contaminated land both in terms of redevelopment and from considerations of human health and environmental impacts. **Assessment and Reclamation of Contaminated Land** R M Harrison, R E Hester, 2007-10-31

Contaminated land and the methods and legal controls governing its reclamation for subsequent development and use are of great current interest and concern. This volume covers aspects of this subject ranging from the origins and extent of contaminated land problems including effects on human health through investigative measures to specific techniques of remediation. It is written in the context of the new UK contaminated land regime and includes human and ecological risk assessment methodology and the legal liabilities and insurance aspects of contaminated land. This authoritative review will be welcomed by those involved in the areas of land use planning and development, consultants and engineers in contaminated site investigation and remediation and environmental regulators. Students of land management and environmental science will also find it essential reading. **Plant-Based Remediation Processes** Dharmendra Kumar Gupta, 2013-03-12

Phytoremediation is an emerging technology that employs higher plants for the clean up of contaminated environments. Basic and applied research have unequivocally demonstrated that selected plant species possess the genetic potential to accumulate, degrade, metabolize and immobilize a wide range of contaminants. The main focus of this volume is on the recent advances of technologies using green plants for remediation of various metals and metalloids. Topics include biomonitoring of heavy metal pollution, amendments of higher uptake of toxic metals, transport of heavy metals in plants and toxicity mechanisms. Further chapters discuss agro-technological methods for minimizing pollution while improving soil quality, transgenic approaches to heavy metal remediation and present protocols for metal remediation via in vitro root cultures.

Handbook of Environmental Remediation Chaudhery Mustansar Hussain, 2020-03-19. Environmental remediation technologies to control or prevent pollution from hazardous waste material is a growing research area in academia and industry and is a matter of utmost concern to public health, to improve ecology and to facilitate the redevelopment of a contaminated site. Recently in situ and ex situ remediation technologies have been developed to rectify the contaminated sites utilizing various tools and devices through physical, chemical, biological, electrical and thermal processes to restrain, remove, extract and immobilize mechanisms to minimize the contamination effects. This handbook brings altogether classical and emerging techniques for hazardous wastes, municipal solid wastes and contaminated water sites combining chemical

biological and engineering control methods to provide a one stop reference This handbook presents a comprehensive and thorough description of several remediation techniques for contaminated sites resulting from both natural processes and anthropogenic activities Providing critical insights into a range of treatments from chemical oxidation thermal treatment air sparging electrokinetic remediation stabilization solidification permeable reactive barriers thermal desorption and incineration phytoremediation biostimulation and bioaugmentation bioventing and biosparging through ultrasound assisted remediation methods electrochemical remediation methods and nanoremediation this handbook provides the reader an inclusive and detailed overview and then discusses future research directions Closing chapters on green sustainable remediation economics health and safety issues and environmental regulations around site remediation will make this a must have handbook for those working in the field
