Rendering Techniques '98 George Drettakis,Nelson Max,1998-08-11 Some of the best current research on realistic rendering is included in this volume It emphasizes the current hot topics in this field image based rendering and efficient local and global illumination calculations In the first of these areas there are several contributions on real world model acquisition and display on using image based techniques for illumination and on efficient ways to parameterize and compress images or light fields as well as on clever uses of texture and compositing hardware to achieve image warping and 3D surface textures In global and local illumination there are contributions on extending the techniques beyond diffuse reflections to include specular and more general angle dependent reflection functions on efficiently representing and approximating these reflection functions on representing light sources and on approximating visibility and shadows Finally there are two contributions on how to use knowledge about human perception to concentrate the work of accurate rendering only where it will be noticed and a survey of computer graphics techniques used in the production of a feature length computer animated film with full 3D characters Rendering Techniques '98 George Drettakis,Nelson Max,2012-12-06 Some of the best current research on realistic rendering is included in this volume It emphasizes the current hot topics in this field image based rendering and efficient local and global illumination calculations In the first of these areas there are several contributions on real world model acquisition and display on using image based techniques for illumination and on efficient ways to parameterize and compress images or light fields as well as on clever uses of texture and compositing hardware to achieve image warping and 3D surface textures In global and local illumination there are contributions on extending the techniques beyond diffuse reflections to include specular and more general angle dependent reflection functions on efficiently representing and approximating these reflection functions on representing light sources and on approximating visibility and shadows Finally there are two contributions on how to use knowledge about human perception to concentrate the work of accurate rendering only where it will be noticed and a survey of computer graphics techniques used in the production of a feature length computer animated film with full 3D characters **Visualization in Scientific Computing '98** Dirk Bartz,2012-12-06 In twelve selected papers common problems in scientific visualization are discussed adaptive and multi resolution methods feature extraction flow visualization and visualization quality Four papers focus on aspects of mesh reduction mesh compression and increasing the quality of the resulting mesh Two extentions on particle tracing are presented as well as a paper on the simulation of material transport Two papers are on feature extraction in dynamics systems and on the accuracy of algorithmic extracted features Three papers focus on stereoscopic volume rendering on the visualization of atomic collision cascades and of quality of visualization systems in general *The Magic of Computer Graphics* Noriko Kurachi,2011-06-01 Computer graphics is a vast field that is becoming larger every day It is impossible to cover every topic of interest even within a specialization such as CG rendering For many years Noriko Kurachi
