Representation Of Meaning In Memory:
    The Representation of Meaning in Memory (PLE: Memory) Walter Kintsch,2014-05-23 Originally published in 1974 this volume presents empirical and theoretical investigations of the role of meaning in psychological processes A theory is proposed for the representation of the meaning of texts employing ordered lists of propositions The author explores the adequacy of this representation with respect to the demands made upon such formulations by logicians and linguists A sufficiently large number of problems are encompassed by the propositional theory to justify its use in psychological research into memory and language comprehension A number of different experiments are reported on a wide variety of topics and these test central portions of this theory and any that purports to deal with how humans represent meaning Among the topics discussed are the role of lexical decomposition in comprehension and memory propositions as the units of recall and the effects of the number of propositions in a text base upon reading rate and recall New problems are explored such as inferential processes during reading differences in levels of memory for text and retrieval speed for textual information On the other hand a study of retrieval from semantic memory focusses on a problem of much current research The final review chapter relates the present work to other current research in the area at the time   **The Representation of Meaning in Memory (PLE: Memory)** Walter Kintsch,2014-05-23 Originally published in 1974 this volume presents empirical and theoretical investigations of the role of meaning in psychological processes A theory is proposed for the representation of the meaning of texts employing ordered lists of propositions The author explores the adequacy of this representation with respect to the demands made upon such formulations by logicians and linguists A sufficiently large number of problems are encompassed by the propositional theory to justify its use in psychological research into memory and language comprehension A number of different experiments are reported on a wide variety of topics and these test central portions of this theory and any that purports to deal with how humans represent meaning Among the topics discussed are the role of lexical decomposition in comprehension and memory propositions as the units of recall and the effects of the number of propositions in a text base upon reading rate and recall New problems are explored such as inferential processes during reading differences in levels of memory for text and retrieval speed for textual information On the other hand a study of retrieval from semantic memory focusses on a problem of much current research The final review chapter relates the present work to other current research in the area at the time   The Representation of Meaning in Memory W.     The Representation of Meaning in Memory Walter Kintsch,1974-01-01   Retrieval and Organizational Strategies in Conceptual Memory (PLE: Memory) Janet Kolodner,2014-05-09 Someday we expect that computers will be able to keep us informed about the news People have imagined being able to ask their home computers questions such as What s going on in the world Originally published in 1984 this book is a fascinating look at the world of memory and computers before the internet became the mainstream phenomenon it is today It looks at the early development of a computer system that could

keep us informed in a way that we now take for granted Presenting a theory of remembering based on human information processing it begins to address many of the hard problems implicated in the quest to make computers remember The book had two purposes in presenting this theory of remembering First to be used in implementing intelligent computer systems including fact retrieval systems and intelligent systems in general Any intelligent program needs to use and store and use a great deal of knowledge The strategies and structures in the book were designed to be used for that purpose Second the theory attempts to explain how people s memories work and makes predictions about the organization of human memory

Representations of Collective Memory in Georgia, Armenia, Abkhazia and Nagorno Karabakh Bartłomiej Krzysztan,2024-11-29 The book is a unique proposal for an integral description of memory regimes in the South Caucasus region covering both the independent states of Armenia and Georgia but also the separatist entities created as a result of the turbulent changes of the early 1990s Abkhazia and Nagorno Karabakh Being a transdisciplinary proposal encompassing the perspectives of political science history and social anthropology the book may be of interest to researchers from different academic disciplines At the same time due to its narrative form it can also be an interesting proposal for students of eastern studies allowing for a fuller understanding of the dynamics of political change in the post Soviet space The comprehensive and integral approach to the issue of analysing and interpreting collective memory through the prism of its representation presented in the form of an anthropological story based on case studies may also be of interest to those not associated with institutional Academia **Remembering Mass Atrocities: Perspectives on Memory Struggles and Cultural Representations in Africa** Mphathisi Ndlovu,Lungile Augustine Tshuma,Shepherd Mpofu,2023-12-28 This book explores how popular cultural artifacts literary texts commemorative practices and other forms of remembrances are used to convey transmit and contest memories of mass atrocities in the Global South Some of these historical atrocities took place during the Cold war As such this book unpacks the influence or role of the global powers in conflict in the Global South Contributors are grappling with a number of issues such as the politics of memorialization memory conflicts exhumations reburials historical dialogue peacebuilding and social healing memory activism visual representation transgenerational transmission of memories and identity politics **Encoding and Navigating Linguistic Representations in Memory** Claudia Felser,Colin Phillips,Matthew Wagers,2017-03-22 Successful speaking and understanding requires mechanisms for reliably encoding structured linguistic representations in memory and for effectively accessing information in those representations later Studying the time course of real time linguistic dependency formation provides a valuable tool for uncovering the cognitive and neural basis of these mechanisms This volume draws together multiple perspectives on encoding and navigating structured linguistic representations to highlight important empirical insights and to identify key priorities for new research in this area Memory and Representation Dena Elisabeth Eber,Arthur G. Neal,2001 Eber and Neal address some of the theoretical issues connected with symbolic constructions of reality through human memory and its subsequent

representation Linkages between what we remember and how we represent it give humans their distinctive characteristics We construct our reality from how we perceive the events in our lives and from that reality we create a symbol system to describe our world It is through such symbolic constructions that we are provided with a usable backdrop for shaping our memories and organizing them into meaningful lines of action These case studies present a new and creative synthesis of the multiple meanings of memory and representation within the context of contemporary perceptions of truth **Proceedings of the Nineteenth Annual Conference of the Cognitive Science Society** Michael G. Shafto,Pat Langley,1997 This volume features the complete text of the material presented at the Nineteenth Annual Conference of the Cognitive Science Society Papers have been loosely grouped by topic and an author index is provided in the back As in previous years the symposium included an interesting mixture of papers on many topics from researchers with diverse backgrounds and different goals presenting a multifaceted view of cognitive science In hopes of facilitating searches of this work an electronic index on the Internet s World Wide Web is provided Titles authors and summaries of all the papers published here have been placed in an online database which may be freely searched by anyone You can reach the web site at www csli stanford edu cogsci97 **Person Memory (PLE: Memory)** Reid Hastie,Thomas Ostrom,Ebbe Ebbesen,Robert Wyer,David Hamilton,Donal Carlston,2014-05-09 Originally published in 1980 this title came about after many late night discussions between the authors during a 3 week workshop on Mathematical Approaches to Person Perception in 1974 In subsequent meetings a mutual interest emerged in the development of cognitive information processing metaphors for human thought and their application to problems of social perception memory and judgment Within the context of modern research on social cognition the most distinctive aspects of the authors work was its empirical focus on how people cognitively represent people in memory and its theoretical emphasis on models of cognitive organization and process They concluded that an adequate theory of social memory was the necessary foundation for solutions to many questions concerning social perception and judgment that had dominated the 1974 workshop This volume summarizes work conducted between 1974 and 1979 on social memory by these authors In addition to six chapters summarizing individual research programs the volume includes a general introduction and a concluding theoretical integration **Stevens' Handbook of Experimental Psychology, Memory and Cognitive Processes** Douglas Medin,2004-02-05 Now available in paperback This revised and updated edition of the definitive resource for experimental psychology offers comprehensive coverage of the latest findings in the field as well as the most recent contributions in methodology and the explosion of research in neuroscience Volume Two Memory and Cognitive Processes focuses on the neurological and cognitive processes on topics such as memory decision making spatial cognition linguistics reasoning and concepts **Representation of Meaning in Episodic Memory** G. campaign to collectivize agriculture in this largely agrarian country following the Soviet model Peasants under Siege provides the first comprehensive look at the far reaching social engineering process that ensued Gail Kligman and Katherine Verdery examine how collectivization assaulted the very foundations of rural life transforming village communities that were organized around kinship and status hierarchies into segments of large bureaucratic organizations forged by the language of class warfare yet saturated with vindictive personal struggles Collectivization not only overturned property relations the authors argue but was crucial in creating the Party state that emerged its mechanisms of rule and the new persons that were its subjects The book explores how ill prepared cadres themselves unconvinced of collectivization s promises implemented technologies and pedagogies imported from the Soviet Union through actions that contributed to the excessive use of force which Party leaders were often unable to control In addition the authors show how local responses to the Party s initiatives compelled the regime to modify its plans and negotiate outcomes Drawing on archival documents oral histories and ethnographic data Peasants under Siege sheds new light on collectivization in the Soviet era and on the complex tensions underlying and constraining political authority   Learning and Memory: A Comprehensive Reference ,2017-07-07 Learning and Memory A Comprehensive Reference Second Edition Four Volume Set is the authoritative resource for scientists and students interested in all facets of learning and memory This updated edition includes chapters that reflect the state of the art of research in this area Coverage of sleep and memory has been significantly expanded while neuromodulators in memory processing neurogenesis and epigenetics are also covered in greater detail New chapters have been included to reflect the massive increase in research into working memory and the educational relevance of memory research No other reference work covers so wide a territory and in so much depth Provides the most comprehensive and authoritative resource available on the study of learning and memory and its mechanisms Incorporates the expertise of over 150 outstanding investigators in the field providing a one stop resource of reputable information from world leading scholars with easy cross referencing of related articles to promote understanding and further research Includes further reading for each chapter that helps readers continue their research Includes a glossary of key terms that is helpful for users who are unfamiliar with neuroscience terminology
