Research related to the management of urban data has a long tradition Through the years a variety of challenging research quest     Geospatial Analysis and Modelling of Urban Structure and Dynamics Bin Jiang,Xiaobai Yao,2010-06-16 A Coming of Age Geospatial Analysis and Modelling in the Early Twenty First Century Forty years ago when spatial analysis first emerged as a distinct theme within geography s quantitative revolution the focus was largely on consistent methods for measuring spatial correlation The concept of spatial au correlation took pride of place mirroring concerns in time series analysis about similar kinds of dependence known to distort the standard probability theory used to derive appropriate statistics Early applications of spatial correlation tended to reflect geographical patterns expressed as points The perspective taken on such analytical thinking was founded on induction the search for pattern in data with a view to suggesting appropriate hypotheses which could subsequently be tested In parallel but using very different techniques came the development of a more deductive style of analysis based on modelling and thence simulation Here the focus was on translating prior theory into forms for generating testable predictions whose outcomes could be compared with observations about some system or phenomenon of interest In the intervening years spatial analysis has broadened to embrace both inductive and deductive approaches often combining both in different mixes for the variety of problems to which it is now applied     *Díospóireachtaí Párlaiminte* Ireland. intense in Latin America Although international literature has made an effort to document the multiple ecosystem services provided by these ecosystems such as water and air cleansing flood mitigation and recreation among others we want to draw attention to the fact that the loss of urban wetlands affects the sustainability of cities and future generations Therefore and given the weakness of public policies implemented in the region for their protection it is essential to highlight good practices mechanisms and strategies aimed at Protection Conservation Innovation Restoration and work with the Community all of this hand in hand with the 17 Sustainable Development Goals The book offers a comprehensive coverage combining the need to protect and conserve urban wetlands from the pressures of urban growth as well as highlighting successful experiences of regulation and of course applied research aimed at nature based solution design for flood management and wastewater treatment restoration areas green infrastructure plans as well as experiences of collective work with communities in contexts of political tensions for the defense of wetlands

Lublin,2020-11-10 In *The Paradox of Representation* David Lublin offers an unprecedented analysis of a vast range of rigorous empirical evidence that exposes the central paradox of racial representation Racial redistricting remains vital to the election of African Americans and Latinos but makes Congress less likely to adopt policies favored by blacks Lublin s evidence together with policy recommendations for improving minority representation will make observers of the political scene reconsider the avenues to fair representation Using data on all representatives elected to Congress between 1972 and 1994 Lublin examines the link between the racial composition of a congressional district and its representative s race as well as ideology The author confirms the view that specially drawn districts must exist to ensure the election of African Americans and Latinos He also shows however that a relatively small number of minorities in a district can lead to the election of a representative attentive to their interests When African Americans and Latinos make up 40 percent of a district according to Lublin s findings they have a strong liberalizing influence on representatives of both parties when they make up 55 percent the district is almost certain to elect a minority representative Lublin notes that particularly in the South the practice of concentrating minority populations into a small number of districts decreases the liberal influence in the remaining areas Thus a handful of minority representatives almost invariably Democrats win elections but so do a greater number of conservative Republicans The author proposes that establishing a balance between majority minority districts and districts where the minority population would be slightly more dispersed making up 40 percent of a total district would allow more African Americans to exercise more influence over their representatives      *Urbanmass Transportation--1963, Hearings ..., 88-1 ..., March 19, 20, 21, 22, 1963* United States.
