The Oxford Handbook of Law, Regulation and Technology Roger Brownsword, Eloise Scotford, Karen Yeung, 2017-07-25 The variety pace and power of

technological innovations that have emerged in the 21st Century have been breathtaking. These technological developments which include advances in networked information and communications, biotechnology, neurotechnology, nanotechnology, robotics, and environmental engineering technology have raised a number of vital and complex questions. Although these technologies have the potential to generate positive transformation and help address grand societal challenges, the novelty associated with technological innovation has also been accompanied by anxieties about their risks and destabilizing effects. Is there a potential harm to human health or the environment? What are the ethical implications? Do these innovations erode or antagonize values such as human dignity, privacy, democracy, or other norms underpinning existing bodies of law and regulation? These technological developments have therefore spawned a nascent but growing body of law and technology scholarship broadly concerned with exploring the legal, social, and ethical dimensions of technological innovation. This handbook collates the many and varied strands of this scholarship, focusing broadly across a range of new and emerging technology and a vast array of social and policy sectors through which leading scholars in the field interrogate the interfaces between law, emerging technology, and regulation. Structured in five parts, the handbook I establishes the collection of essays within existing scholarship concerned with law and technology as well as regulatory governance; II explores the relationship between technology development by focusing on core concepts and values which technological developments implicate; III studies the challenges for law in responding to the emergence of new technologies, examining how legal norms, doctrine, and institutions have been shaped, challenged, and destabilized by technology, and even how technologies have been shaped by legal regimes; IV provides a critical exploration of the implications of technological innovation, examining the ways in which technological innovation has generated challenges for regulators in the governance of technological development and the implications of employing new technologies as an instrument of regulatory governance; V explores various interfaces between law, regulatory governance, and new technologies across a range of key social domains.

*Women and Reproductive Technologies* Annette Burfoot, Derya Güngör, 2021-11-15. The Open Access version of this book available at [www.taylorfrancis.com](http://www.taylorfrancis.com) has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license. A sociological and historical study of the development of reproductive technologies, this book focuses on key technological developments through a biomedicalization lens, with special attention to gender. Using in vitro fertilization (IVF) as a hub, it critically examines the main areas of related socio-technical developments: reproductive science, birth control, animal husbandry, genetics, and reproductive medicine. Employing a critical framework to illuminate dominant discourses, the book also highlights examples of social resistance as well as contradictory responses to new reproductive technologies. Over eight chapters, the author examines the social history of reproduction and sexuality, reproductive technologies from old to new, and debates surrounding new reproductive technologies and genetic engineering. *Women and Reproductive Technologies* pays close attention to the interconnections between the business of reproduction and replication industries, the sociality of
