Advanced Information Systems Engineering Anne Persson, Janis Stirna, 2004-05-25 The CAiSE 2004 was the 16 in the series of International Conferences on Advanced Information Systems Engineering In the year 2004 the conference was hosted by the Faculty of Computer Science and Information Technology Riga Technical University Latvia Since the late 1980s the CAiSE conferences have provided a forum for the presentation and exchange of research results and practical experiences within the field of Information Systems Engineering The conference theme of CAiSE 2004 was Knowledge and Model Driven Information Systems Engineering for Networked Organizations Modern businesses and IT systems are facing an ever more complex environment characterized by openness variety and change Organizations are coming less self sufficient and increasingly dependent on business partners and other actors These trends call for openness of business as well as IT systems i.e. the ability to connect and interoperate with other systems Furthermore organizations are experiencing ever more variety in their business in all conceivable dimensions The different competencies required by the workforce are multiplying In the same way the variety in technology is overwhelming with a multitude of languages platforms devices standards and products Moreover organizations need to manage an environment that is constantly changing and where lead times product life cycles and partner relationships are shortening The demand of having to constantly adapt IT to changing technologies and business practices has resulted in the birth of new ideas which may have a profound impact on the information systems engineering practices in future years such as autonomic

Macro cognition Metrics and Scenarios Janet E. Miller,2018-09-03 Macro cognition Metrics and Scenarios Design and Evaluation for Real World Teams translates advances by scientific leaders in the relatively new area of macro cognition into a format that will support immediate use by members of the software testing and evaluation community for large scale systems as well as trainers of real world teams Macro cognition is defined as how activity in real world teams is adapted to the complex demands of a setting with high consequences for failure The primary distinction between macro cognition and prior research is that the primary unit for measurement is a real world team coordinating their activity rather than individuals processing information the predominant model for cognition for decades This book provides an overview of the theoretical foundations of macro cognition describes a set of exciting new macro cognitive metrics and provides guidance on using the metrics in the context of different approaches to evaluation and measurement of real world teams Network-Centric

Internet Management Issues: A Global Perspective Haynes, John D., 2001-07-01 It is tempting to think that in the year 2001 our technology is very sophisticated and accordingly it is very tempting to believe that present day computer technology is very advanced begging the question of to what The fact is that we have only just begun to develop computer technology and the recent implementation of the Internet brings us to a special threshold in that development Development stages require very careful and thoughtful management What we do now in this present development stage will be profoundly important for future generations The management of the foundation for the evolution of computer technology is a very special case because it will also become intimately connected with the management of mankind itself not only in groups or collectively but also eventually as a species
