## **Research And Argumentation:**

Why Good Argument is Critical to Useful Research Mike Metcalfe, 2007 Writers like Rorty Popper Dewey and Feyerabend suggest that rather than searching for more and more exacting and rigorous rules for how to undertake well justified research we need to be concerned with communities of doubters These if adequately applying dialectic argument will act to challenge unjustified knowledge claims and so save us all from being deceived This book encourages doubt by providing over a dozen ways to critique research especially where that research results in knowledge claims about human activities Each chapter provides another pragmatic conception of knowledge used to question the assumptions behind whatever research work you have just read Therefore the book offers a way of learning about your own discipline specific research literature while also learning how to design a well justified research report *Business Research Through Argument* Mike Metcalfe, 2012-12-06 This book suggests that business research in the collection analysis and communication of evidence will benefit from explicit acceptance of research as argumentation Argumentation is the process of compiling an argument through selection and organization of the relevant evidence Recently business research methods books have placed too much emphasis on the scientific method as brute empiricism using only large sample statistical testing and demanding prediction through retesting old theories Especially with regard to the study of human activity there is now much evidence that there is not one special scientific method This book argues that all types of empirical data including statistics and personal experiences be accepted as data but that it is essential that these observations be explained This book will provide researchers and postgraduate business students with a strategy for conducting research that encourages thought provides a way of critically perceiving previous research as well as suggesting a logical structure for communicating their research
