**Latinas and African American Women at Work** Irene Browne, 2000-10-12 One of Choice magazine's Outstanding Academic Books of 1999 Accepted wisdom about the opportunities available to African American and Latina women in the U S labor market has changed dramatically Although the 1970s saw these women earning almost as much as their white counterparts in the 1980s their relative wages began falling behind and the job prospects plummeted for those with little education and low skills At the same time African American women more often found themselves the sole support of their families While much social science research has centered on the problems facing black male workers *Latinas and African American Women at Work* offers a comprehensive investigation into the eroding progress of these women in the U S labor market The prominent sociologists and economists featured in this volume describe how race and gender intersect to especially disadvantage black and Latina women Their inquiries encompass three decades of change for women at all levels of the workforce from those who spend time on the welfare rolls to middle class professionals Among the many possible sources of increased disadvantage they particularly examine the changing demands for skills increasing numbers of immigrants in the job market the precariousness of balancing work and childcare responsibilities and employer discrimination While racial inequity in hiring often results from educational differences between white and minority women this cannot explain the discrimination faced by women with higher skills Minority women therefore face a two tiered hurdle based on race and gender Although the picture for young African American women has grown bleaker overall for Latina women the story is more complex with a range of economic outcomes among Cubans Puerto Ricans Mexicans and Central and South Americans *Latinas and African American Women at Work* reveals differences in how professional African American and white women view their position in the workforce with black women perceiving more discrimination for both race and gender than whites The volume concludes with essays that synthesize the evidence about racial and gender based obstacles in the labor market Given the current heated controversy over female and minority employment as well as the recent sweeping changes to the national welfare system the need for empirical data to inform the public debate about disadvantaged women is greater than ever before The important findings in *Latinas and African American Women at Work* substantially advance our understanding of social inequality and the pervasive role of race ethnicity and gender in the economic well being of American women *Social Stratification, Class, Race, and Gender in Sociological Perspective, Second Edition* David Grusky, 2019-09-05 The volume offers essential reading for undergraduates who need an introduction to the field for graduate students who wish to broaden their understanding of stratification research and for advanced scholars who seek a basic reference guide Although most of the selections are middle range theoretical pieces suitable for introductory courses the anthology also includes advanced contributions on the cutting edge of research The editor outlines a modified study plan for undergraduate students requiring a basic introduction to the field **Work and Mental Health in**

**Social Context** Mark Tausig, Rudy Fenwick, 2011-09-08 Anyone who has ever had a job has probably experienced work related stress at some point or another For many workers however job related stress is experienced every day and reaches more extreme levels Four in ten American workers say that their jobs are very or extremely stressful Job stress is recognized as an epidemic in the workplace and its economic and health care costs are staggering by some estimates over 1 billion per year in lost productivity absenteeism and worker turnover and at least that much in treating its health effects ranging from anxiety and psychological depression to cardiovascular disease and hypertension Why are so many American workers so stressed out by their jobs Many psychologists say stress is the result of a mismatch between the characteristics of a job and the personality of the worker Many management consultants propose reducing stress by redesigning jobs and developing better individual strategies for coping with their stress But these explanations are not the whole story They don't explain why some jobs and some occupations are more stressful than other jobs and occupations regardless of the personalities and coping strategies of individual workers Why do auto assembly line workers and air traffic controllers report more job stress than university professors self employed business owners or corporate managers yes managers The authors of *Work and Mental Health in Social Context* take a different approach to understanding the causes of job stress Job stress is systematically created by the characteristics of the jobs themselves by the workers occupation the organizations in which they work their placements in different labor markets and by broader social economic and institutional structures processes and events And disparities in job stress are systematically determined in much the same way as are other disparities in health income and mobility opportunities In taking this approach the authors draw on the observations and insights from a diverse field of sociological and economic theories and research These go back to the nineteenth century writings of Marx Weber and Durkheim on the relationship between work and well being They also include the more contemporary work in organizational sociology structural labor market research from sociology and economics research on unemployment and economic cycles and research on institutional environments This has allowed the authors to develop a unified framework that extends sociological models of income inequality and status attainment or allocation to the explanation of non economic health related outcomes of work Using a multi level structural model this timely and comprehensive volume explores what is stressful about work and why specifically address these and questions and more What characteristics of jobs are the most stressful what characteristics reduce stress Why do work organizations structure some jobs to be highly stressful and some jobs to be much less stressful Is work in a bureaucracy really more stressful How is occupational status occupational power and authority related to the stressfulness of work How does the segmentation of labor markets by occupation industry race gender and citizenship maintain disparities in job stress Why is unemployment stressful to workers who don't lose their jobs How do public policies on employment status collective bargaining overtime affect job stress Is work in the current Post neo Fordist era of work more or less stressful than work during the Fordist era In addition to providing a new way to understand

the sociological causes of job stress and mental health the model that the authors provide has broad applications to further study of this important area of research This volume will be of key interest to sociologists and other researchers studying social stratification public health political economy institutional and organizational theory      **Social Inequality Across the Generations** Jani Erola, Elina Kilpi-Jakonen, 2017-03-31 Social Inequality Across the Generations provides an innovative perspective on social stratification studies by advancing the theoretical and empirical case for the influence of resource compensation It examines whether resource compensation is a successful mechanism for social mobility contrasting it against competing types of resource accumulation such as multiplication This book is the first to cover extensively the role of compensation in intergenerational attainment a new and rapidly spreading concept in stratification research      **Social Change And The Middle Classes** Tim Butler, Mike Savage, 2013-11-05 First Published in 1995 The study of the middle classes actually poses a variety of interesting challenges Traditionally the social scientific gaze has been directed either downwards to the working classes the poor and the dispossessed or upwards to the wealthy and powerful For all these reasons a collection of original papers on various aspects of the British middle classes seems an important venture that will cast valuable light on the course of social change in Britain more generally This book is designed to bring together a series of accessible high quality research papers on various aspects of the British middle classes      *Race, Ethnic, and Gender Earnings Inequality* Donald Tomaskovic-Devey, 1994      Sociological Abstracts Leo P. Chall, 1998      **Frontiers of Sociology** Peter Hedström, Björn Wittrock, 2009-01-31 The 37th World Congress of the IIS focused on theory and research at the forefront of sociology and the relationship between sociology and its neighbouring disciplines This volume constitutes a sustained effort by prominent sociologists and other social scientists to assess the current standing of sociology It is a stocktaking of the unique nature of sociology in the light of advances within the discipline itself and within a range of neighbouring disciplines Some of the chapters outline institutional and professional strategies for sociology in the new millennium Others trace scholarly advances and propose ambitious research programmes drawing on recent developments not only within traditional neighbouring disciplines such as history political science and economics but also within the cognitive cultural and mathematical sciences Contributors include Hans Peter Blossfeld Raymond Boudon Richard Breen Christofer R Edling S N Eisenstadt Jack Goldstone Philip Gorski Peter G rdenfors Ulf Hannerz Peter Hedstr m Hans Joas Dietrich Rueschemeyer Jens Rydgren Neil Smelser Aage B S rensen Richard Swedberg Piotr Sztompka Peter Wagner and Bj rn Wittrock      **The SAGE Handbook of Survey Methodology** Christof Wolf, Dominique Joye, Tom W Smith, Yang-chih Fu, 2016-07-11 Survey Methodology is becoming a more structured field of research deserving of more and more academic attention The SAGE Handbook of Survey Methodology explores both the increasingly scientific endeavour of surveys and their growing complexity as different data collection modes and information sources are combined The handbook takes a global approach with a team of international experts looking at local and national specificities as well as problems of cross

national comparative survey research The chapters are organized into seven major sections each of which represents a stage in the survey life cycle Surveys and Societies Planning a Survey Measurement Sampling Data Collection Preparing Data for Use Assessing and Improving Data Quality The SAGE Handbook of Survey Methodology is a landmark and essential tool for any scholar within the social sciences Who Marries Whom? Hans-Peter Blossfeld, A. Timm, 2012-12-06 Marriage and social inequality are closely interrelated Marriage is dependent on the structure of marriage markets and marriage patterns have consequences for social inequality This book demonstrates that in most modern societies the educational system has become an increasingly important marriage market particularly for those who are highly qualified Educational expansion in general and the rising educational participation of women in particular unintentionally have increased the rate of assortative meeting and assortative mating across birth cohorts Rising educational homogamy means that social inequality is further enhanced through marriage because better and worse educated single men and women pool their economic and sociocultural advantages and disadvantages within couples In this book we study the changing role of the educational system as a marriage market in modern societies from a cross national comparative perspective Using life history data from a broad range of industrialized countries and longitudinal statistical models we analyze the process of spouse selection in the life courses of single men and women step by step The countries included in this book vary widely in important characteristics such as demographic behavior and institutional characteristics The life course approach explicitly recognizes the dynamic nature of partner decisions the importance of educational roles and institutional circumstances as young men and women move through their life paths and the cumulation of advantages and disadvantages experienced by individuals

**Unemployment Dynamics in the United States and West Germany** Markus Gangl, 2012-12-06 In writing this book I increasingly became aware of the extent to which much of the finest social science research has been devoted to the issue of unemployment Unemployment rightly is a key issue in the social sciences for search of social and political answers to the economic social and psychological distress caused by uncertainty and macroeconomic change I was glad to find my own worries shared by eminent and respected scholars George Akerlof once confessed to pursue the study of unemployment ultimately because of his father's distress from fear of unemployment and Wout Ultee started research on unemployment from the consideration that parents talk about unemployment risks should not come to dominate marriage parties or other family occasions The problem of unemployment is thus hardly confined to actual loss of income but one where economic insecurity begins to undermine the very fabric of society In consequence to combat unemployment should indeed be a foremost issue in societies striving for freedom and justice for their citizenry yet to succeed obviously requires an understanding of the underlying economic realities If this study could contribute to this endeavor all the time spent in writing would seem well spent indeed Against the significant body of existing social science research on unemployment it seems appropriate to be clear about the scope and limitations of the current study however *The Diffusion and Social*

*Implications of MOOCs* Valentina Goglio, 2022-01-25 Chapter 9 of this book is available for free in PDF format as Open Access from the individual product page at [www.routledge.com](http://www.routledge.com) It has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license Since their first appearance in 2011 Massive Open Online Courses MOOCs have been at the centre of a great deal of media attention owing to their disruptive potential in education As university level courses delivered free of charge on digital platforms they have also been the occasion of conflicting views regarding the quality of education and the future configuration of higher education systems Based on new empirical research including qualitative interviews as well as quantitative data from learners across several MOOCs this book contributes to the debate by providing a comparative study of the diffusion and social implications of MOOCs in the USA where everything started and in Europe where MOOCs were belatedly adopted by higher education institutions but now exhibit remarkable growth Investigating the impact of MOOCs at macro level on national higher education systems as well as the social implications of MOOCs at micro level with particular attention to the opportunities offered to learners to acquire knowledge and skills *The Diffusion and Social Implications of MOOCs* provides an encompassing comparative investigation of the specificity and social implications of the diffusion of MOOCs in two geographically and institutionally diverse contexts As such it will appeal to social scientists with interests in new technologies and higher education

Wolbers, Dieter Verhaest, 2025-01-09 Reviewing cutting edge developments in the field this Handbook presents a comprehensive overview of the education work nexus It employs a diverse range of labour market theories to examine the many ways in which education is a crucial determinant of people's life chances and experiences of employment

Rural China Jie Fan, Thomas Heberer, Wolfgang Taubmann, 2015-05-15 This book reports the findings of two field studies conducted between 1993 and 2001 in seven townships and six provinces in China The authors describe the process of rural urbanization and its related economic social and political changes by focusing mainly on the zhen town in addition to administrative offices and companies involved in the local economy and village committees The authors show that the social changes resulting from China's economic reforms are occurring mainly from below and that this process is also resulting in a weakening of the economic and political dominance of the central government Other changes discussed in this study include the development of new ownership structures and the increasing dominance of the private sector a shift in the functions of administrative offices as the bureaucracy becomes increasingly business oriented the rise of a new local elite a rebirth of traditional social structures clans local associations and the emergence of new interest groups and institutions to represent their needs

**Handbook of Competence and Motivation, First Edition** Andrew J. Elliot, Carol S. the findings of The National Organizations Study Organizations in America provides a comprehensive review of the first national survey of organizations in the United States Using a statistically representative sample this work is the most authoritative database on the workings of organizations available The principal investigators of the study use this data set to define what we know about the structures and human resource practices in American organizations and describes The National Organizations Study and its implications Specific employment practices hiring training promotion performance measurement benefit packages contingent work and how they compare between different businesses and business sectors Differential treatment of employees according to ethnicity and gender This breakthrough publication is an indispensable reference tool for those in the areas of organizational studies human resources sociology of work industrial psychology social stratification labor and labor economics      *The Social Scientific Study of Jewry* Uzi Rebhun,2014-03-13 Continuing its

distinguished tradition of focusing on central political sociological and cultural issues of Jewish life in the last century this latest volume in the annual Studies in Contemporary Jewry series focuses on how Jewry has been studied in the social science disciplines Its symposium consists of essays that discuss sources approaches and debates in the complementary fields of demography sociology economics and geography The social sciences are central for the understanding of contemporary Jewish life and have engendered much controversy over the past few decades To a large extent the multitude of approaches toward Jewish social science research reflects the nature of population studies in general and that of religions and ethnic groups in particular Yet the variation in methodology definitions and measures of demographic socioeconomic and cultural patterns is even more salient in the study of Jews Different data sets have different definitions for what is Jewish or who is a Jew In addition Jews as a group are characterized by high rates of migration including repeated migration which makes it difficult to track any given Jewish population Finally the question of identification is complicated by the fact that in most places especially outside of Israel it is not clear whether being Jewish is primarily a religious or an ethnic matter or

both or neither This volume also features an essay on American Jewry and North African Jewry review essays on rebuilding after the Holocaust Nazi war crimes trials and Jewish historiography and reviews of new titles in Jewish studies     **Our Social World: Condensed** Jeanne H. *Mobilities: New Perspectives on Transport and Society* John Urry,2016-04-22 Bringing together the leading authors currently working at the intersection of social science and transport science this volume provides a companion to the well established and extensive international Transport and Society series Each chapter and the volume as a whole offers closer and richer consideration of the issues practices and structures of multiple mobilities which shape the current world but which have typically been overlooked or minimised What this approach seeks to do is not only draw attention to many new areas of research and investigation relating to mobile lives but also to point to new theories and methods by which such lives have to be researched and examined Such new theories and methods are relevant both to rethinking transport studies as such but are also recasting societal studies as transport so that it comes out of the ghetto and enters mainstream social science
