The present review analyses one of the most comprehensive books on research methodology. The book entitled “Tests, Measurements and Research Methods in Behavioural Sciences” brings together the requisite qualities and adequate information and resources on a conceptually complicated topic of research methodology. Rajasekar et al. (2006) asserted that “research is a logical and systematic search for new and useful information on a particular topic” (p. 2). According to Leedy and Armord (2006), “research is a process through which we attempt to achieve systematically and with the support of data to answer a question, the resolution of a problem, or a greater understanding of a phenomenon” (p. 24).
