Piaget's Genetic Epistemology for Mathematics Education Research Paul Christian Dawkins, Amy J. Hackenberg, Anderson Norton, 2024-01-02 The book provides an entry point for graduate students and other scholars interested in using the constructs of Piaget's genetic epistemology in mathematics education research Constructs comprising genetic epistemology form the basis for some of the most well developed theoretical frameworks available for characterizing learning particularly in mathematics The depth and complexity of Piaget's work can make it challenging to find adequate entry points for learners not least because it requires a reorientation regarding the nature of mathematical knowledge itself This volume gathers leading scholars to help address that challenge The main section of the book presents key Piagetian constructs for mathematics education research such as schemes and operations figurative and operative thought images and meanings and decentering The chapters that discuss these constructs include examples from research and address how these constructs can be used in research There are two chapters on various types of reflective abstraction because this construct is Piaget's primary tool for characterizing the advancement of knowledge The later sections of the book contain commentaries reflecting on the contributions of the body of theory developed in the first section They connect genetic epistemology to current research domains such as equity and the latest in educational psychology Finally the book closes with short chapters

Research in Basic Writing Martin Jacobi, Michael G. Moran, 1990-02-15. This reference handbook surveys research on the central issue associated with the teaching of unprepared writers. Though basic writing has only been recognized as a distinct area of teaching and research since 1975, the existing bibliographic texts already seem limited due to their age or lack of annotation. This volume provides current and extensive bibliographic essays and will help to define this new field of study for teachers and researchers. Following an introduction that summarizes the origins and significant texts in basic writing, the book is divided into three sections: Social Science Perspectives, Linguistic Perspectives, and Pedagogical Perspectives. The first section, which contains three essays, views the field through the lens of social, psychological, and political issues. The second section, also containing three essays, examines contributions made from studies of grammar, dialects, and second language acquisition. The third section, in its four essays, focuses on the design, development, administration, and evaluation of basic writing courses, the use of computers in basic writing classrooms, the role of the writing lab, and the preparation of basic writing teachers. An appendix that reviews current textbooks for basic writing courses is also included, as well as an index. This book will be a valuable resource for teachers of basic writing in education courses and workshops that train teachers and tutors and in fields such as linguistics, technical writing, and Teaching English as a Second Language. It will also be an important addition to public and university libraries and many education programs.

Embedding Social Justice in Teacher Education and Development in Africa Carmel McNaught, Sarah Gravett, 2021-02-15. This book explores the plethora of social justice issues facing teacher education and development in Africa. Using both theoretical and empirical perspectives, it considers the need for teacher education to be transformational and address conventional pedagogy as well as the rights and duties of all citizens. The edited volume focuses on a wide range of relevant aspects such as decolonisation, economic models, environmental concerns, as well as multilingual and multicultural aspects of education. Evidence-based chapters cover strategies used to support preservice and in-service teachers on how best to tackle issues of social justice through induction activities, pedagogy, and discipline content involving local communities and the role of technology, including the use of open educational resources. The principles underlying these strategies are being used in the COVID-19 pandemic and will be equally relevant in the post-COVID-19 world. This book will be of great interest for academics, researchers, and postgraduate students in the fields of teacher education, African education, educational policy, international education, and comparative education.
