

Research is vital to facilitate change that can improve medical and health care. What we require today is research that impacts the health of the individual and the community, resulting in meaningful improvement in health status.

Research is best learnt by doing rather than reading. However a practical guide can assist the process.

This research handbook was designed for this purpose. Much of the contents have been developed and revised based on numerous research training workshops conducted over many years. A step by step approach to preparing a research proposal is provided with actual examples. In this new edition the book has been enlarged to include analysis, report writing, publication and translating research into practice.

"Research is vital to healthcare. It is the primary vehicle to discover health needs and solutions for the improvement of health and health care systems."
