Research Directions In Computer Science An Mit Perspective:

Research Directions in Computer Science, 1991 **Cooperative Knowledge Processing** Stefan Kirn, Gregory O'Hare, 2012-12-06 In the light of the challenges that face today's organizations there is a growing recognition that future market success and long term survival of enterprises will increasingly depend upon the effective usage of information technology. Of late a new generation of terminology has emerged to describe enterprises. This terminology draws heavily upon the virtual concept: virtual reality, virtual organization, virtual working environment and indeed virtual product. However, developing computerized organisations for the 21st century demands serious thought with regard to the judicious integration of organizational theory, design and practice with research tools and methods from within information processing technology. Within this book we approach this aim from the perspective of a radically decentralized, possibly virtual enterprise. We assume that organizations are becoming increasingly process orientated rather than adhering to the former, more traditional organizational structures based upon task oriented models. This approach has proved illuminating in that, due to the inherent autonomy of organizational subunits, any approach to coordinating decentralized activities including workflows and business processes necessitates a cooperative style of problem solving. This book introduces the reader to a stimulating new field of interdisciplinary research in cooperative problem solving. In Chapter 1 Kim presents a view of three central disciplines, namely those of Organizational Theory, Computer Supported Cooperative Work (CSCW) and Distributed Artificial Intelligence (DAI). The applications given here demonstrate how future enterprises will benefit from recent advances in the technological arena of cooperative knowledge processing.

Made-up Minds Gary L. Drescher, 1991. *Made Up Minds* addresses fundamental questions of learning and concept invention by means of an innovative computer program that is based on the cognitive developmental theory of psychologist Jean Piaget. Drescher uses Piaget's theory as a source of inspiration for the design of an artificial cognitive system called the schema mechanism and then uses the system to elaborate and test Piaget's theory. The approach is original enough that readers need not have extensive knowledge of artificial intelligence and a chapter summarizing Piaget's work assists readers who lack a background in developmental psychology. *Laboratory for Computer Science Progress Report* Massachusetts Institute of Technology. Laboratory for Computer Science, 1992.

Perspectives of Systems Informatics Manfred Broy, Alexandre V. Zamulin, 2004-01-13 This book constitutes the thoroughly refereed postconference proceedings of the 5th International Andrei Ershov Memorial Conference PSI 2003 held in Akademgorodok, Novosibirsk, Russia, in July 2003. The 55 revised full papers presented were carefully reviewed and selected from 110 submissions during two rounds of evaluation and improvement. The papers are organized in topical sections on programming, software engineering, software education, program synthesis and transformation, graphical interfaces, partial evaluation and supercompilation, verification logic and types, concurrent and distributed systems, reactive systems, program specification, verification and model checking, constraint programming, documentation and testing.

Kirschenbaum, 2016-05-02 Writing in the digital age has been as messy as the inky rags in Gutenberg's shop or the molten lead of a Linotype machine Matthew Kirschenbaum examines how creative authorship came to coexist with the computer revolution Who were the early adopters and what made others anxious Was word processing just a better typewriter or something more Advances in Artificial Life Mathieu Capcarrere, Alex A. Freitas, Peter J. Bentley, Colin G. Johnson, Jon Timmis, 2005-09-19 The Artificial Life term appeared more than 20 years ago in a small corner of New Mexico USA Since then the area has developed dramatically many researchers joining enthusiastically and research groups sprouting everywhere This frenetic activity led to the emergence of several strands that are now established fields in themselves We are now reaching a stage that one may describe as maturer with more rigour more benchmarks more results more stringent acceptance criteria more applications in brief more sound science This which is the natural path of all new areas comes at a price however A certain enthusiasm a certain adventurousness from the early years is fading and may have been lost on the way The field has become more reasonable To counterbalance this and to encourage lively discussions a conceptual track where papers were judged on criteria like importance and or novelty of the concepts proposed rather than the experimental theoretical results has been introduced this year A conference on a theme as broad as Artificial Life is bound to be very diverse but a few tendencies emerged First fields like Robotics and Autonomous Agents or Evolutionary Computation are still extremely active and keep on bringing a wealth of results to the Artificial Life community Even there however new tendencies appear like collective robotics and more specifically self assembling robotics which represent now a large subsection Second new areas appear *AI and Cognitive Science '91* Humphrey Sorensen, 2013-03-14 This book contains the edited versions of papers presented at the Fourth Irish Conference on Artificial Intelligence and Cognitive Science AICS 91 which was held at University College Cork Ireland on 19-20 September 1991 The main aims of this annual conference series are to promote AI research in Ireland to provide a forum for the exchange of ideas amongst different disciplines concerned with the study of cognition and to provide an opportunity for industry to see what research is being carried out in Ireland and how it might benefit from the results of this research While most of the participants at the conference came from universities and companies within Ireland a positive feature was the interest shown from outside the country resulting in participants from Britain USA and Italy The keynote speaker was Professor James A Bowen North Carolina State University who spoke on future trends in knowledge representation The topics covered in the presented papers included fundamental approaches to AI natural language knowledge representation information retrieval deduction epistemics and vision The sponsors of the conference were Digital Equipment Co Galway and Eolas the Irish Science and Technology Board March 1992 Humphrey Sorensen Contents Section 1 Foundations and Methodologies Toward a New Foundation for Cognitive Science S 6 Nuallain 3 Towards an Adequate Cognitive Model of Analogical Mapping M T Keane and S Duff 37 HOST A HOLISTIC System Theory G Hartnett and H
