Research Directions In Concurrent Object:

Formal Methods for Open Object-based Distributed Systems Elie Najm,Jean-Bernard Stefani,2016-02-13 Object based Distributed Computing is being established as the most pertinent basis for the support of large heterogeneous computing and telecommunications systems The advent of Open Object based Distributed Systems OODS brings new challenges and opportunities for the use and development of formal methods Formal Methods for Open Object based Distributed Systems presents the latest research in several related fields and the exchange of ideas and experiences in a number of topics including formal models for object based distributed computing semantics of object based distributed systems and programming languages formal techniques in object based and object oriented specification analysis and design refinement and transformation of specifications multiple viewpoint modeling and consistency between different models formal techniques in distributed systems verification and testing types service types and subtyping specification verification and testing of quality of service constraints and formal methods and the object life cycle It contains the selected proceedings of the International Workshop on Formal Methods for Open Object based Distributed Systems sponsored by the International Federation for Information Processing and based in Paris France in March 1996 **Formal Methods for Open Object-Based Distributed Systems** Paolo Ciancarini,Alessandro Fantechi,Roberto Gorrieri,1999-02-28 Formal Methods for Open Object Based Distributed Systems presents the leading edge in several related fields specifically object orientated programming open distributed systems and formal methods for object oriented systems With increased support within industry regarding these areas this book captures the most up to date information on the subject Many topics are discussed including the following important areas object oriented design and programming formal specification of distributed systems open distributed platforms types interfaces and behaviour formalisation of object oriented methods This volume comprises the proceedings of the International Workshop on Formal Methods for Open Object based Distributed Systems FMOODS sponsored by the International Federation for Information Processing IFIP which was held in Florence Italy in February 1999 Formal Methods for Open Object Based Distributed Systems is suitable as a secondary text for graduate level courses in computer science and telecommunications and as a reference for researchers and practitioners in industry commerce and government Software Reuse: Advances in Software Reusability William B. Frakes,2000-06-14 This book constitutes the refereed proceedings of the 6th International Conference on Software Reuse ICSR 6 held in Vienna Austria in June 2000 The 26 revised full papers presented were carefully reviewed and selected from numerous submissions The book is divided into topical sections on generative reuse and formal description languages object oriented methods product line architectures requirements reuse and business modeling components and libraries and design patterns Modular Programming Languages Jürg Gutknecht,Wolfgang Weck,2006-12-31 Thecircleisclosed The European Modula 2 Conference was originally launched with the goal of increasing the popularity of Modula 2 a programming language created by Niklaus Wirth and his

team at ETH Zuric h as a successor of Pascal For more than a decade the conference has wandered through Europe passing Bled Slovenia in1987 Loughborough UK in1990 Ulm Germany in1994 and Linz Austria in 1997 Now at the beginning of the new millennium it is back at its roots in Zuric h Switzerland While traveling through space and time the conference has mutated It has widened its scope and changed its name to Joint Modular Languages Conference JMLC With an invariant focus though on modularsoftwareconstructioninteaching research and outthere inindustry This topic has never been more important than today ironically not because of insu cient language support but quite on the contrary due to a truly c fusing variety of modular concepts o ered by modern languages modules pa ages classes and components the newest and still controversial trend The recent notion of component is still very vaguely de ned so vaguely in fact that it almost seems advisable to ignore it Wirth in his article Records Modules Objects Classes Components in honor of Hoare s retirement in 1999 Clar cation is needed **Computational Logic** Ulrich Berger,Helmut Schwichtenberg,2012-12-06 Recent developments in computer science clearly show the need for a better theoretical foundation for some central issues Methods and results from mathematical logic in particular proof theory and model theory are of great help here and will be used much more in future than previously This book provides an excellent introduction to the interplay of mathematical logic and computer science It contains extensively reworked versions of the lectures given at the 1997 Marktoberdorf Summer School by leading researchers in the field Topics covered include proof theory and specification of computation J Y Girard D Miller complexity of proofs and programs S R Buss S S Wainer computational content of proofs H Schwichtenberg constructive type theory P Aczel H Barendregt R L Constable computational mathematics U Martin rewriting logic J Meseguer and game semantics S Abramski **Coordinating Distributed Objects** Svend Frølund,1996 Coordinating Distributed Objects presents a novel object oriented methodology to simplify the construction of distributed software systems The methodology is based on a programming construct called synchronizer that allows the coordination of distributed application components to be programmed in a modular fashion and at a high level of abstraction The methodology offers new insight into the problem of coordination in distributed systems and can be applied to a broad spectrum of distributed software systems such as process control multimedia and groupware Current methodologies for developing distributed applications do not adequately address the complexity of coordinating application components The coherence between asynchronous application components for instance is usually implemented by explicitly programming a large number of messages and the responses to them The synchronizer construct however implements coordination as abstract and reusable coordination constraints and thereby reduces code size and complexity by an order of magnitude Synchronizers offer other attractions as well they maintain procedural abstraction data encapsulation and inherent concurrency Overall they allow coordination to be expressed at a level of abstraction that is much closer to the mental model of code developers **Communication-Based Systems** Günter Hommel,2000-02-29 Proceedings of the 3rd International Workshop held at the TU Berlin Germany 31 March 1 April 2000

Object Oriented Methods for Interoperable Scientific and Engineering Computing Michael E. Henderson,Christopher Radcliff Anderson,Stephen L. Lyons,1999-01-01 Contains papers presented at the October 1998 SIAM Workshop on Object Oriented Methods for Interoperable Scientific and Engineering Computing that covered a variety of topics and issues related to designing and implementing computational tools for science and engineering   Objective Coordination in Multi-Agent System Engineering Michael Schumacher,2003-06-29 Based on a suitably defined coordination model distinguishing between objective inter agent coordination and subjective intra agent coordination this book addresses the engineering of multi agent systems and thus contributes to closing the gap between research and applications in agent technology After reviewing the state of the art the author introduces the general coordination model ECM and the corresponding object oriented coordination language STL The practicability of ECM STL is illustrated by the simulation of a particular collective robotics application and the automation of an e commerce trading system Situated at the intersection of behavior based artificial intelligence and concurrent and distributed systems this monograph is of relevance to the agent R D community approaching agent technology from the distributed artificial intelligence point of view as well as for the distributed systems community
