Evolution and the Capacity for Commitment Randolph Nesse, 2001-11-29 Commitment is at the core of social life. The social fabric is woven from promises and threats that are not always immediately advantageous to the parties involved. Many commitments such as signing a contract are fairly straightforward deals in which both parties agree to give up certain options. Other commitments such as the promise of life long love or a threat of murder are based on more intangible factors such as human emotions. In *Evolution and the Capacity for Commitment* distinguished researchers from the fields of economics, psychology, ethology, anthropology, philosophy, medicine, and law offer a rich variety of perspectives on the nature of commitment and question whether the capacity for making, assessing, and keeping commitments has been shaped by natural selection. Game theorists have shown that players who use commitment strategies by learning to convey subjective offers and to gauge commitments others are willing to make achieve greater success than those who rationally calculate every move for immediate reward. *Evolution and the Capacity for Commitment* includes contributions from some of the pioneering students of commitment. Their elegant analyses highlight the critical role of reputation building and show the importance of investigating how people can believe that others would carry out promises or threats that go against their own self interest. Other contributors provide real world examples of commitment across cultures and suggest the evolutionary origins of the capacity for commitment. Perhaps nowhere is the importance of commitment and reputation more evident than in the institutions of law, medicine, and religion. Essays by professionals in each field explore why many practitioners remain largely ethical in spite of manifest opportunities for client exploitation. Finally, *Evolution and the Capacity for Commitment* turns to leading animal behavior experts to explore whether non humans also use commitment strategies, most notably through the transmission of threats or signs of non aggression. Such examples illustrate how such tendencies in humans may have evolved. Viewed as an adaptive evolutionary strategy, commitment offers enormous potential for explaining complex and irrational emotional behaviors within a biological framework. *Evolution and the Capacity for Commitment* presents compelling evidence for this view and offers a potential bridge across the current rift between biology and the social sciences. Value Incommensurability Henrik Andersson, Anders Herlitz, 2021-12-14
Incommensurability is the impossibility to determine how two options relate to each other in terms of conventional comparative relations. This book features new research on incommensurability from philosophers who have shaped the field into what it is today, including John Broome, Ruth Chang, and Wlodek Rabinowicz. The book covers four aspects relating to incommensurability. In the first part, the contributors synthesize research on the competing views of how to best explain incommensurability. Part II illustrates how incommensurability can help us deal with seemingly insurmountable problems in ethical theory and population ethics. The contributors address the Repugnant Conclusion, the Mere Addition Paradox, and so-called Spectrum Arguments. The chapters in Part III outline and summarize problems caused by incommensurability for decision theory. Finally, Part IV tackles topics related to risk, uncertainty, and incommensurability. *Value Incommensurability: Ethics, Risk, and Decision Making* will be of interest to researchers and advanced students working in ethical theory, decision theory, action theory, and philosophy of economics.
