Vischer, 2012-12-06 We live in era of transformation of technology of social values and of the way work is done This book represents a timely and innovative addition to current thinking and writing about transformation in organizations In order to meet an increasingly global and competitive environment organizations are undergoing reengineering work process redesign right sizing creating a virtual office and other forms of restructuring and basic change of the way work is accomplished Such transformation means analyzing and redesigning core processes in organizations around new kinds of principles such as total quality and customer service The eventual effect of these changes is likely to be the networked or boundary less organization in which the traditional boundaries between functions and between producers and their suppliers and sometimes even between organizations and their competitors are broken down The goal of such transformation is to make the work of the organization more efficient and productive to produce more with fewer resources and at a lower cost In the conventional view of the transformation process certain secondary concerns such as the need to protect the environment or to help an increasingly heterogeneous work force deal with its personal issues are seen as problematic for this core thrust Some recent work however is beginning to show that if these so called secondary concerns are considered central far from being problematic they actually present strategy opportunities for productive innovation and change *Design Economics for the Built Environment* Herbert Robinson, Barry Symonds, Barry Gilbertson, Ben Ilozor, 2015-06-15 The drive towards environmentally friendly buildings and infrastructure has led to a growing interest in providing design solutions underpinned by the core principles of sustainability to balance economic social and environmental factors *Design Economics for the Built Environment* Impact of sustainability on project evaluation presents new directions reflecting the need to recognise the impact of climate change and the importance of sustainability in project evaluation The aim is to provide a new approach to understanding design economics in the context of the changing policy environment legislative and regulatory framework and increasing economic environmental and social pressure as result of the sustainability agenda The book follows a structured approach from theories and principles in the earlier chapters to the practical applications and emerging techniques focusing on value and social economic and environmental considerations in making design decisions It starts with the policy context building on various theories and principles such as capital cost value of design and resource based theories the new rules of measurement NRM to explore cost planning the relationship between height and costs key socio economic and environmental variables for design appraisal eco cost value ratio EVR whole life theory and the treatment of carbon emission as external costs productivity and efficiency fiscal drivers and legal framework for carbon reduction procurement and allocation of risks in contracts Case studies practical examples and frameworks throughout reinforce theories and principles and relate them to current practice The book is essential reading for postgraduate students in architecture building and quantity surveying and is also a valuable resource for academics consultants and policy makers in the built environment *Facilities Change*

Management Edward Finch, 2011-11-14 Modern organisations are subject to continual change technologies evolve organisational structures are modified people and underlying cultures are transformed Yet the facilities that organisations occupy are static and can impede the changes that are essential to organisational survival The response to change in terms of property and support services is often too little too late leading to facilities that do not support organisational reality The facilities management team is thus constantly challenged to bridge the gap between what an organisation has and what it needs Facilities Change Management is a practical evaluation of the management of change for facilities managers and related professions It considers the forces of change affecting facilities decisions the obstacles to change at a resource level and human level the effective implementation of change the human aspect of change Each of these is considered in relation to modern facilities management issues The discussion will enable practising facilities managers project managers surveyors service providers and architects to understand engage with and manage facilities change effectively at a strategic level Through real life case studies it demonstrates the complexities of change and hidden elements of change that may undermine carefully planned projects Professional Practice in Facility Programming (Routledge Revivals) Wolfgang Preiser, 2015-06-11 This compelling resource which was first published in 1993 was the first book on facility programming to design parameters and specifications over a broad range of project types The book's practical how to approach is exceedingly beneficial to professionals and students involved with a wide variety of building types from corporate facilities to parks day care centres health centres and correctional facilities It also covers the fine points of working with clients The contributors provide real world case studies endowing the reader with the tools necessary to reap a deeper understanding and a more critical assessment of the major programming approaches today Professional Practice in Facility Programming is a uniquely current self contained resource that will prove invaluable to a wide cross section of practitioners and students *Impression Management in the Organization* Robert A.
