Readings In Language And Mind:

Readings in Language and Mind Heimir Geirsson, Michael Losonsky, 1996-01-23 This is an anthology of landmark essays in the philosophy of language philosophy of mind and cognitive science since 1950 It includes essays that aim to reflect the fact that philosophy and the science of mind and language have close historical and conceptual ties Each section begins with a brief and simple overview highlighting the issues and recommending other readings The combination of this editorial material with a selection of classic essays makes this anthology a very flexible tool for introductory courses in cognitive science philosophy of language philosophy of mind and philosophy of psychology as well as courses devoted to contemporary analytic philosophy However the book also contains significant advanced and recent material making it suitable for more advanced stud including beginning graduate courses

A Glossary of Language and Mind Jean Aitchison, 2003 This alphabetical guide to language and mind gives an up to date introduction to the key topics of speech comprehension speech production and child language Written by a well known author in the field the entries are concise and lucid and provide an easy to read overview of an area of linguistics which lies at the core of the human ability to use language

Language Ruth Garrett Millikan, 2005 Guiding the work of most linguists and philosophers of language today is the assumption that language is governed by prescriptive normative rules Many believe that it is of the essence of thought itself to follow rules rules of inference determining the intentional contents of our concepts and that these rules originate as internalized rules of language However exactly what it is for there to be such things as normative rules of language remains distressingly unclear From what source do these norms flow What sanctions enforce them What happens exactly if you don't follow the rules How do children learn the rules Ruth Millikan presents a radically different way of viewing the partial regularities that language displays the norms and conventions of language The central norms applying to language like those norms of function and behavior that account for the survival and proliferation of biological traits are non evaluative norms Specific linguistic forms survive and are reproduced together with co operative hearer responses because in a critical mass of cases these patterns of production and response benefit both speakers and hearers Conformity is needed only often enough to ensure that the co operative use constituting the norm the convention continues to be copied and hence continues to characterize some interactions of some speaker hearer pairs What needs to be reproduced for discursive language forms to survive it turns out is not specific conceptual roles but only satisfaction conditions coupled to essential elements of hearer responses An uncompromising rejection of conceptual analysis as a tool in philosophy results At the same time the distinction between the propositional content and the force of a linguistic utterance comes into very sharp focus force emerging as essential to the creation of content rather than as something added to content The distinction between illocutionary and perlocutionary force the distinction between linguistic meaning and speaker meaning and the semantics pragmatics distinction are each illuminated in new and crisper ways On the model proposed neither the intentionality of thought nor the intentionality of

language is derived from the other Processes involved in understanding language are not Gricean but more like direct perception of the world as mediated for example through the natural signs contained in the structured light that allows vision There are also startling implications for pragmatics and for how children learn language Language and Mind Contemporary Readings in Philosophy and Cognitive Science Geirsson, Chomsky and His Critics Louise M. Antony, Norbert Hornstein, 2008-04-15 In this compelling volume ten distinguished thinkers William G Lycan Galen Strawson Jeffrey Poland Georges Rey Frances Egan Paul Horwich Peter Ludlow Paul Pietroski Alison Gopnik and Ruth Millikan address a variety of conceptual issues raised in Noam Chomsky s work Distinguished list of critics William G Lycan Galen Strawson Jeffrey Poland Georges Rey Frances Egan Paul Horwich Peter Ludlow Paul Pietroski Alison Gopnik and Ruth Millikan Includes Chomsky s substantial new replies and responses to each essay The best critical introduction to Chomsky s thought as a whole Readings in Philosophy and Cognitive Science Alvin I. Goldman, 1993 This collection of readings shows how cognitive science can influence most of the primary branches of philosophy as well as how philosophy critically examines the foundations of cognitive science Its broad coverage extends beyond current texts that focus mainly on the impact of cognitive science on philosophy of mind and philosophy of psychology to include materials that are relevant to five other branches of philosophy epistemology philosophy of science and mathematics metaphysics language and ethics The readings are organized by philosophical fields with selections evenly divided between philosophers and cognitive scientists They draw on research in numerous areas of cognitive science including cognitive psychology developmental psychology social psychology psychology of reasoning and judgment artificial intelligence linguistics and neuropsychology There are timely treatments of current topics and debates such as the innate understanding of number children s theory of mind self knowledge consciousness connectionism and ethics and cognitive science **Prospects for Meaning** Richard Schantz, 2012-07-30 Original papers by leading international authors address the most important problem in the philosophy of language the question of how to assess the prospects of developing a tenable theory of meaning given the influential sceptical attacks mounted against the concept of meaning by Willard Van Quine and Saul Kripke and their adherents in particular Thus the texts attempt to answer the fundamental questions of whether there are meanings and if there are of what they are and of the form a serious philosophical theory of meaning should take **Language, Mind, and Knowledge** Keith Gunderson, 1975-09-24 Language Mind and Knowledge was first published in 1975 Minnesota Archive Editions uses digital technology to make long unavailable books once again accessible and are published unaltered from the original University of Minnesota Press editions This is Volume VII of the Minnesota Studies in the Philosophy of Science a series published in cooperation with the Minnesota Center for Philosophy of Science at the University of Minnesota and edited by Herbert Feigl and Grover Maxwell Professor Maxwell is the present director of the Center Some of the papers in this volume were presented at or grew out of a conference on the philosophy of language which was held at the Center under the direction of

Professor Gunderson Others were written independently The aim of the book like that of the conference is to assemble a wide variety of approaches to issues in the philosophy of language with emphasis on the ways in which the issues involved have bearing on other matters such as linguistic theory cognitive psychology the philosophy of mind and epistemology There are twelve papers by eleven contributors Languages and Language by David Lewis Logic and Language An Examination of Recent Criticisms of Internationalism by Jerrold J Katz The Meaning of Meaning by Hilary Putnam Reference and Context by Charles Chastain Language Thought and Communication by Gilbert Harman Knowledge of Language by Noam Chomsky Language Rules and Complex Behavior by Michael D Root A Taxonomy of Illocutionary Acts by John R Searle On What We Know by Zeno Vendler Vendler on Knowledge and Belief by Bruce Aune Reply to Professor Aune by Zeno Vendler Brain Writing and Mind Reading by D C Dennett

Language, Mind and Computation P. Mondal, 2014-11-12 This book explores how and in what ways the relationship between language mind and computation can be conceived of given that a number of foundational assumptions about this relationship remain unacknowledged in mainstream linguistic theory yet continue to be the basis of theoretical developments and empirical advances

Language and Meaning in Cognitive Science Andy Clark, Josefa Toribio, 2012-11-12 Summarizes and illuminates two decades of research Gathering important papers by both philosophers and scientists this collection illuminates the central themes that have arisen during the last two decades of work on the conceptual foundations of artificial intelligence and cognitive science Each volume begins with a comprehensive introduction that places the coverage in a broader perspective and links it with material in the companion volumes The collection is of interest in many disciplines including computer science linguistics biology information science psychology neuroscience iconography and philosophy Examines initial efforts and the latest controversies The topics covered range from the bedrock assumptions of the computational approach to understanding the mind to the more recent debates concerning cognitive architectures all the way to the latest developments in robotics artificial life and dynamical systems theory The collection first examines the lineage of major research programs beginning with the basic idea of machine intelligence itself then focuses on specific aspects of thought and intelligence highlighting the much discussed issue of consciousness the equally important but less densely researched issue of emotional response and the more traditionally philosophical topic of language and meaning Provides a gamut of perspectives The editors have included several articles that challenge crucial elements of the familiar research program of cognitive science as well as important writings whose previous circulation has been limited Within each volume the papers are organized to reflect a variety of research programs and issues The substantive introductions that accompany each volume further organize the material and provide readers with a working sense of the issues and the connection between articles
