Recent Advances In Field Theory And Statistical Mechanics:

Recent Advances in Field Theory P. Binétruy, G. Girardi, P. Sorba, 2016-06-03 *Recent Advances in Field Theory* presents the proceedings of the Fourth Annecy Meeting on Theoretical Physics held in Annecy le Vieux France on March 5-9 1990 This book presents several relevant developments on the subject including quantum algebra two dimensional quantum gravity and topological quantum theories Organized into 29 chapters this book begins with an overview of the Hamiltonian quantization of the topological Chern Simons theory This text then examines the conformal affine Liouville model Other chapters consider the global analyticity properties of functions correlated with causal kernels on de Sitter space This book discusses as well the three particle models in terms of noncommutative gauge theory namely the Peccei Quinn model the Glashow Weinberg Salam model and the standard model The final chapter deals with the development on the construction of lattice integrable models corresponding to the $SU(N)$ coset conformal field theories This book is a valuable resource for physicists and scientists

Recent advances in field theory and statistical mechanics, 1984 **Topology and Geometry in Physics** Eike Bick, 2005-01-18 Application of the concepts and methods of topology and geometry have led to a deeper understanding of many crucial aspects in condensed matter physics cosmology gravity and particle physics This book can be considered an advanced textbook on modern applications and recent developments in these fields of physical research Written as a set of largely self contained extensive lectures the book gives an introduction to topological concepts in gauge theories BRST quantization chiral anomalies supersymmetric solitons and noncommutative geometry It will be of benefit to postgraduate students educating newcomers to the field and lecturers looking for advanced material [Recent Developments in Quantum Field Theory](#) J. Ambjorn, B.J. Durhuus, J.L. Petersen, 2012-12-02 Theoretical particle physicists discuss the present status and in particular the latest developments in quantum field theory in their broadest aspects This volume contains the main lectures presented at the symposium and reflects the contemporary status of a line of development one of whose initiators was Niels Bohr **Quantum Optomechanics and Nanomechanics** Pierre-François Cohadon, Jack Harris, Florian Marquardt, Leticia Cugliandolo, 2020-03-05 The Les Houches Summer School in August 2015 covered the emerging fields of cavity optomechanics and quantum nanomechanics Optomechanics is flourishing and its concepts and techniques are now applied to a wide range of topics Modern quantum optomechanics was born in the late 1970s in the framework of gravitational wave interferometry with an initial focus on the quantum limits of displacement measurements Carlton Caves Vladimir Braginsky and others realized that the sensitivity of the anticipated large scale gravitational wave interferometers GWI was fundamentally limited by the quantum fluctuations of the measurement laser beam After tremendous experimental progress the sensitivity of the upcoming next generation of GWI will effectively be limited by quantum noise In this way quantum optomechanical effects will directly affect the operation of what is arguably the world's most impressive precision experiment However optomechanics has also gained a life of its own with a focus on the quantum aspects of moving mirrors

Laser light can be used to cool mechanical resonators well below the temperature of its environment After proof of principle demonstrations of this cooling in 2006 a number of systems were used as the field gradually merged with its condensed matter cousin nanomechanical systems to try to reach the mechanical quantum ground state eventually demonstrated in 2010 by pure cryogenic techniques and just one year later by a combination of cryogenic and radiation pressure cooling The book covers all aspects historical theoretical experimental of the field with its applications to quantum measurement foundations of quantum mechanics and quantum information It is an essential read for any new researcher in the field

Differential Geometric Methods in Theoretical Physics Ling-Lie Chau, Werner Nahm, 2013-06-29 After several decades of reduced contact the interaction between physicists and mathematicians in the front line research of both fields recently became deep and fruit ful again Many of the leading specialists of both fields became involved in this development This process even led to the discovery of previously unsuspected connections between various subfields of physics and mathematics In mathematics this concerns in particular knots von Neumann algebras Kac Moody algebras integrable non linear partial differential equations and differential geometry in low dimensions most importantly in three and four dimensional spaces In physics it concerns gravity string theory integrable classical and quantum field theories solitons and the statistical mechanics of surfaces New discoveries in these fields are made at a rapid pace This conference brought together active researchers in these areas reporting their results and discussing with other participants to further develop thoughts in future new directions The conference was attended by 50 participants from 15 nations These proceedings document the program and the talks at the conference This conference was preceded by a two week summer school Ten lecturers gave extended lectures on related topics The proceedings of the school will also be published in the NATO ASI volume by Plenum The Editors vii ACKNOWLEDGMENTS We would like to thank the many people who have made the conference a success Furthermore we appreciate the excellent talks The active participation of everyone present made the conference lively and stimulating All of this made our efforts worth while

From Molecules to Living Organisms: an Interplay Between Biology and Physics Eva Pebay-Peyroula, Hugues Nury, Christine Ziegler, François Parcy, Rob W. H. Ruigrok, Leticia F. Cugliandolo, 2016 The aim of this title is to familiarise the new generation of PhD students and postdoctoral fellows with the principles and methods of modern lattice field theory which aims to resolve fundamental non perturbative questions about QCD without uncontrolled approximations

Topological Aspects of Condensed Matter Physics Claudio Chamon, Mark O. Goerbig, Roderich Moessner, Leticia F. Cugliandolo, 2017-02-16 This book contains lecture notes by world experts on one of the most rapidly growing fields of research in physics Topological quantum phenomena are being uncovered at unprecedented rates in novel material systems The consequences are far reaching from the possibility of carrying currents and performing computations without dissipation of energy to the possibility of realizing platforms for topological quantum computation The pedagogical lectures contained in this book are an excellent introduction to this

blooming field The lecture notes are intended for graduate students or advanced undergraduate students in physics and mathematics who want to immerse in this exciting XXI century physics topic This Les Houches Summer School presents an overview of this field along with a sense of its origins and its placement on the map of fundamental physics advancements The School comprised a set of basic lectures part 1 aimed at a pedagogical introduction of the fundamental concepts which was accompanied by more advanced lectures part 2 covering individual topics at the forefront of today's research in condensed matter physics

Quantum Optics and Nanophotonics Claude Fabre, Vahid Sandoghdar, Nicolas Treps, Leticia F. Cugliandolo, 2017 Over the last few decades the quantum aspects of light have been explored and major progress has been made in understanding the specific quantum aspects of the interaction between light and matter The domain of classical optics has recently seen many exciting new developments especially in the areas of nano optics nano antennas metamaterials and optical cloaking Approaches based on single molecule detection and plasmonics have provided new avenues for exploring light matter interaction at the nanometre scale All these topics have in common a trend to consider and use smaller and smaller objects down to the micrometre nanometre and even atomic range The summer school held in Les Houches in July 2013 treated all these subjects lying at the frontier between nanophotonics and quantum optics in a series of lectures given by world experts

Quantum Machines Michel H. Devoret, Benjamin Huard, Robert Schoelkopf, Leticia F. Cugliandolo, 2014 What is a quantum machine Can we say that lasers and transistors are quantum machines After all physicists advertise these devices as the two main spin offs of the understanding of quantum physics In a true quantum machine the signal collective variables must themselves be treated as quantum operators Other engineered quantum systems based on natural rather than artificial degrees of freedom can also qualify as quantum machines This book provides the basic knowledge needed to understand and investigate the physics of these novel systems

Post-Planck Cosmology Cédric Deffayet, Patrick Peter, Benjamin Wandelt, Matías Zaldarriaga, Leticia F. Cugliandolo, 2015 This book gathers the lecture notes of the 100th Les Houches Summer School which was held in July 2013 These lectures represent a comprehensive pedagogical survey of the frontier of theoretical and observational cosmology just after the release of the first cosmological results of the Planck mission The Cosmic Microwave Background is discussed as a possible window on the still unknown laws of physics at very high energy and as a backlight for studying the late time Universe Other lectures highlight connections of fundamental physics with other areas of cosmology and astrophysics the successes and fundamental puzzles of the inflationary paradigm of cosmic beginning the themes of dark energy and dark matter and the theoretical developments and observational probes that will shed light on these cosmic conundrums in the years to come

Stochastic Processes and Random Matrices Grégory Schehr, Alexander Altland, Yan V. Fyodorov, Neil O'Connell, Leticia F. Cugliandolo, 2017-08-15 The field of stochastic processes and Random Matrix Theory RMT has been a rapidly evolving subject during the last fifteen years The continuous development and discovery of new tools connections and ideas have led to an avalanche of new results These

breakthroughs have been made possible thanks to a large extent to the recent development of various new techniques in RMT Matrix models have been playing an important role in theoretical physics for a long time and they are currently also a very active domain of research in mathematics An emblematic example of these recent advances concerns the theory of growth phenomena in the Kardar Parisi Zhang KPZ universality class where the joint efforts of physicists and mathematicians during the last twenty years have unveiled the beautiful connections between this fundamental problem of statistical mechanics and the theory of random matrices namely the fluctuations of the largest eigenvalue of certain ensembles of random matrices This text not only covers this topic in detail but also presents more recent developments that have emerged from these discoveries for instance in the context of low dimensional heat transport on the physics side or integrable probability on the mathematical side

Soft Interfaces Lydéric Bocquet, David Quéré, Thomas A. Witten, Leticia F. Cugliandolo, 2017 This volume is an introduction to interfacial phenomena It collects the lecture notes from a one month Summer school in Les Houches The courses and the notes are intended to be especially useful for master and PhD students as well as young researchers

Strongly Interacting Quantum Systems out of Equilibrium Thierry Giamarchi, Andrew J. Millis, Olivier Parcollet, Hubert Saleur, Leticia F. Cugliandolo, 2016-07-07 Over the last decade new experimental tools and theoretical concepts are providing new insights into collective nonequilibrium behavior of quantum systems The exquisite control provided by laser trapping and cooling techniques allows us to observe the behavior of condensed bose and degenerate Fermi gases under nonequilibrium drive or after quenches in which a Hamiltonian parameter is suddenly or slowly changed On the solid state front high intensity short time pulses and fast femtosecond probes allow solids to be put into highly excited states and probed before relaxation and dissipation occur Experimental developments are matched by progress in theoretical techniques ranging from exact solutions of strongly interacting nonequilibrium models to new approaches to nonequilibrium numerics The summer school Strongly interacting quantum systems out of equilibrium held at the Les Houches School of Physics as its XCIX session was designed to summarize this progress lay out the open questions and define directions for future work This books collects the lecture notes of the main courses given in this summer school
