Recent Advances of Research in Antinutritional Factors in Legume Seeds and Rapeseed A. J. M. Jansman, 1998

Recent Advances of Research in Antinutritional Factors in Legume Seeds and Rapeseed A J M Jansman, G D Hill, J Huisman, A F B Van Der Poel, 1998-07 This publication contains the proceedings of the 4th International Workshop on Antinutritional Factors in Legume Seeds and Oilseeds held in Toledo Spain on 8-10 March 2004. This series of meetings brings together experts working in this field of Science from throughout the world. A major feature of each conference session is an invited review which outlines the advances that have been made in a particular area since the last meeting. A major factor that was considered at this meeting was the likely impact of plant genetic modification on the nutritional quality of their seeds for human and animal feeding. As an example, already a number of legume species and rapeseed have been modified to improve the sulphur amino acid content of their seed and thus their protein quality. Besides the major grain legume species and rapeseed that had been discussed at previous meetings in this series, number of crop products as potential protein sources for animal feeding were considered for the first time. These included cottonseed meal, linseed meal and sunflower seed meal. The potential of some new exotic crops from Mexico was also covered, including Mexican species of the genus *Lupinus* and a Mexican plant from the same family as castor bean which has a very high oil content but is usually toxic. Work from Cuba compared the nutritional characteristics of soybean with a range of tropical grain legume species which have received little previous attention. A major change at this meeting was the greater consideration of the effects, both positive and negative, of the consumption of these seeds for human nutrition. A major review on the development of allergenicity to legume seed in humans is included. There was also consideration of the potential role of antinutritional factors in reducing the growth of various types of tumour cells. The presented papers also suggest that the consumption of legume seed in the diet can potentially reduce serum cholesterol levels. Overall from the 5 conference sessions there are 52 papers. Of these 7 are major invited reviews on the current state of research in this important area for human and animal feeding. Nutrition and health of the gastrointestinal tract M.C. Blok, H.A. Vahl, L. de Lange, A.E. v.d. Braak, G. Hemke, M. Hessing, 2023-08-28 Microbial agents particularly bacteria represent the greatest risk to public health The traditional end product oriented food inspection systems are inadequate for identifying and eliminating the usually symptomless animal carriers of agents causing foodborne infections and intoxications Modern risk based prevention approaches are the only effective way to reduce the prevalence of these hazards from our foods As an additional safety valve microbial decontamination procedures are currently being suggested and its implementation in industrial food processing has at least in some parts of the world met with governmental approval The residues in foods of some non microbial agents have more recently also caused substantial consumer disquiet This equally applies to non conventional foods containing GMO s In this publication these issues are addressed by invited expert scientists from various disciplines many of which have key positions in EU funded research programmes on these very topics and or are advisers to international public health bodies The editors firmly believe that the very nature of the theme the

excellence of the papers and the holistic approach chosen will draw an audience from both an industry and academic background

Soybean and Nutrition Hany El-Shemy, 2011-09-12 Worldwide soybean seed proteins represent a major source of amino acids for human and animal nutrition Soybean seeds are an important and economical source of protein in the diet of many developed and developing countries Soy is a complete protein and soy foods are rich in vitamins and minerals Soybean protein provides all the essential amino acids in the amounts needed for human health Recent research suggests that soy may also lower risk of prostate colon and breast cancers as well as osteoporosis and other bone health problems and alleviate hot flashes associated with menopause This volume is expected to be useful for student researchers and public who are interested in soybean

Plant and Human Health, Volume 2 Munir Ozturk, Khalid Rehman Hakeem, 2019-01-22 Early anthropological evidence for plant use as medicine is 60 000 years old as reported from the Neanderthal grave in Iraq The importance of plants as medicine is further supported by archeological evidence from Asia and the Middle East Today around 1.4 billion people in South Asia alone have no access to modern health care and rely instead on traditional medicine to alleviate various symptoms On a global basis approximately 50 to 80 thousand plant species are used either natively or as pharmaceutical derivatives for life threatening conditions that include diabetes hypertension and cancers As the demand for plant based medicine rises there is an unmet need to investigate the quality safety and efficacy of these herbals by the scientific methods Current research on drug discovery from medicinal plants involves a multifaceted approach combining botanical phytochemical analytical and molecular techniques For instance high throughput robotic screens have been developed by industry it is now possible to carry out 50 000 tests per day in the search for compounds which act on a key enzyme or a subset of receptors This and other bioassays thus offer hope that one may eventually identify compounds for treating a variety of diseases or conditions However drug development from natural products is not without its problems Frequent challenges encountered include the procurement of raw materials the selection and implementation of appropriate high throughput bioassays and the scaling up of preparative procedures Research scientists should therefore arm themselves with the right tools and knowledge in order to harness the vast potentials of plant based therapeutics The main objective of *Plant and Human Health* is to serve as a comprehensive guide for this endeavor Volume 1 highlights how humans from specific areas or cultures use indigenous plants Despite technological developments herbal drugs still occupy a preferential place in a majority of the population in the third world and have slowly taken roots as alternative medicine in the West The integration of modern science with

traditional uses of herbal drugs is important for our understanding of this ethnobotanical relationship Volume 2 deals with the phytochemical and molecular characterization of herbal medicine Specifically It will focus on the secondary metabolic compounds which afford protection against diseases Lastly Volume 3 focuses on the physiological mechanisms by which the active ingredients of medicinal plants serve to improve human health Together this three volume collection intends to bridge the gap for herbalists traditional and modern medical practitioners and students and researchers in botany and horticulture
