Receptor Modeling In Environmental Chemistry:

Receptor Modeling in Environmental Chemistry (Volume 76). Hopke PK.,1985 **Chemometrics in Environmental Chemistry - Applications** Jürgen Einax,2013-06-29 Pattern recognition and other chemometrical techniques are important tools in interpreting environmental data This volume presents authoritatively state of the art applications of measuring and handling environmental data The chapters are written by leading experts **Receptor Modeling in Environmental Chemistry** Philip K. Hopke,1985-04-10 The first book to comprehensively review the rapidly growing field of receptor modeling It systematically presents the analytical and mathematical methods that have been developed and used to characterize airborne particulate matter and to identify its sources The techniques described can be applied to a variety of problems since the measured properties in a particular system can be related to the sum of independently contributing causal factors The book features an introduction to matrix algebra and several important concepts in numerical analysis including the singular value decompositions *Receptor Modeling for Air Quality Management* P.K. Hopke,1991-06-03 This book presents the background and application of receptor models for the source identification and quantitative mass apportionment of airborne pollutants Over the past decade receptor models have become an accepted part of the process for developing effective and efficient air quality management plans Information is provided on the ambient and source sampling and chemical analysis needed to provide the input data for receptor models Commonly used models are described with examples so that the air quality specialist can see how these models are applied Recent advances in several areas of the field are presented as well as the perspective of both U S Federal and State level air quality managers on how these models fit into the development of a management plan The aim of the book is to provide a practical guide to persons who may be given the task of implementing receptor modeling as a part of some air quality management problem The intention of all the chapter authors is to furnish both the basic information needed to begin doing receptor modeling as well as some insight into some of the problems related to the use of these models These tools like any others used in solving complex technological problems are not a panacea but do represent powerful aids in data analysis that can lead to insights as to how an airshed functions and thus to effective and efficient air quality management strategies

scientists working on analysis and purification of a large number of compounds and the analysis of polymer bound compounds. However, formidable challenges lie ahead of today's researcher. For example, high throughput analysis and purification technologies must be further developed to ensure combinatorial libraries are purifiable and drugable. To this end, *Analysis and Purification Methods in Combinatorial Chemistry* describes various analytical techniques and systems for the development, validation, quality control, purification, and physicochemical testing of combinatorial libraries. A new volume in Wiley's Chemical Analysis series, this text has four parts covering various approaches to monitoring reactions on solid support and optimizing reactions for library synthesis. High throughput analytical methods used to analyze the quality of libraries, high throughput purification techniques, analytical methods applied in post synthesis and post purification stages. Drawing from the contributions of respected experts in combinatorial chemistry, this comprehensive book provides coverage of applications of Nuclear Magnetic Resonance (NMR), liquid chromatography mass spectrometry (LC/MS), Fourier Transform Infrared (FTIR), micellar electrokinetic chromatography (MEKC), technologies as well as other analytical techniques. This eminently useful volume is an essential addition to the library of students and researchers studying or working in analytical chemistry, combinatorial chemistry, medicinal chemistry, organic chemistry, biotechnology, biochemistry, or biophysics.

Dynamics of Mercury Pollution on Regional and Global Scales Nicola Pirrone, Kathryn R. Mahaffey, 2005-12-12. This book brings together authors with expertise in a wide range of fields to provide an up to the minute overview of the most important problems relating to mercury in the environment. The book reflects growing concern over the likelihood of harmful effects to human health and sensitive ecosystems posed by mercury in the light of increasing fossil fuel combustion, mercury use in a range of manufactured goods, and the lack of emission control policies. Concern has been expressed at local, national, and international levels in the last three years; both the European Commission and UNEP have published reports on mercury in the environment. Growing concern has led to an increased effort to understand the fate of mercury in the environment, including primary production and trade in mercury, emissions from manufacturing and power generation, natural emissions, and re-emission, atmospheric transport and transformation, deposition patterns, uptake by biota, and eventual health impacts on living organisms. The increasing specialisation and amount of research in the numerous scientific fields associated with the study of the fate of mercury in the environment make the publication of this book both necessary and timely. For experts and non-experts who require both the broader picture as well as an awareness of the latest progress in the fields relevant to mercury research, this book provides the most comprehensive and up to date overview available. The book has five sections.
