Sustainable Energy Namir Khan, Willem H. Vanderburg, 2001 This annotated bibliography introduces readers to preventive approaches for making the energy requirements of modern ways of life more sustainable Since a society can neither create nor destroy energy all energy is temporarily borrowed from the biosphere and returned to it in degraded form The activities of a way of life of a society that involve energy flows may be represented as a network for which the biosphere acts as the ultimate source and sink This network and therefore the energy basis for a modern life style will be sustainable when the biosphere can perform these roles indefinitely The present bibliography regards the preventive approaches related to energy as a capital component of preventive approaches for improving the sustainability of contemporary civilization This book as well as the two companion volumes *Sustainable Production* and *Healthy Cities* is the result of a twelve year research project carried out at the Center for Technology and Social Development at the University of Toronto The research findings led to the development of a new conceptual framework and strategy aimed at converting technological and economic growth into development that
