Representations Of Vision Trends And Tacit Assumptions In Vision Research:

    Representations of Vision Andrei Gorea,1991-04-26 This stimulating volume on vision extends well beyond the traditional areas of vision research and places the subject in a much broader philosophical context The emphasis throughout is to integrate and illuminate the visual process The first three parts of the volume provide authoritative overviews on computational vision and neural networks on the neurophysiology of visual cortex processing and on eye movement research Each of these parts illustrates how different research perspectives may jointly solve fundamental problems related to the efficiency of visual perception to the relationship between vision and eye movements and to the neurophysiological codes underlying our visual perceptions In the fourth part leading vision scientists introduce the reader to some major philosophical problems in vision research such as the nature of ultimate codes for perceptual events the duality of psycho physics the bases of visual recognition and the paradigmatic foundations of computer vision research **Spatial Vision in Humans and Robots** Laurence Harris,Michael Jenkin,1993 A book of great interest both to biological researchers and also to designers of robots and computer vision systems What is Cognitive Science? Ernest Lepore,Zenon Pylyshyn,1999-10-18 Written by an assembly of leading researchers in the field this volume provides an innovative and non technical introduction to cognitive science and the key issues that animate the field **Neuroscience and Philosophy** Maxwell Bennett,Daniel Dennett,Peter Hacker,John Searle,2009-04-22 Philosophy Dialogues on Perception Bela Julesz,1995 An elucidation of ideas and insights generated by the paradigm of early vision presented in the form of dialogues

    Object Recognition in Man, Monkey, and Machine Michael J. Tarr,Heinrich H. Bulthoff,1999-03-15 The contributors bring a wide range of methodologies to bear on the common problem of image based object recognition These interconnected essays on three dimensional visual object recognition present cutting edge research by some of the most creative

neuroscientific cognitive and computational scientists in the field Cassandra Moore and Patrick Cavanagh take a classic demonstration the perception of two tone images and turn it into a method for understanding the nature of object representations in terms of surfaces and the interaction between bottom up and top down processes Michael J Tarr and Isabel Gauthier use computer graphics to study whether viewpoint dependent recognition mechanisms can generalize between exemplars of perceptually defined classes Melvyn A Goodale and G Keith Humphrey use innovative psychophysical techniques to investigate dissociable aspects of visual and spatial processing in brain injured subjects D I Perrett M W Oram and E Ashbridge combine neurophysiological single cell data from monkeys with computational analyses for a new way of thinking about the mechanisms that mediate viewpoint dependent object recognition and mental rotation Shimon Ullman also addresses possible mechanisms to account for viewpoint dependent behavior but from the perspective of machine vision Finally Philippe G Schyns synthesizes work from many areas to provide a coherent account of how stimulus class and recognition task interact The contributors bring a wide range of methodologies to bear on the common problem of image based object recognition   **Perception as Bayesian Inference** David C. Knill,Whitman Richards,1996-09-13 Bayesian probability theory has emerged not only as a powerful tool for building computational theories of vision but also as a general paradigm for studying human visual perception This 1996 book provides an introduction to and critical analysis of the Bayesian paradigm Leading researchers in computer vision and experimental vision science describe general theoretical frameworks for modelling vision detailed applications to specific problems and implications for experimental studies of human perception The book provides a dialogue between different perspectives both within chapters which draw on insights from experimental and computational work and between chapters through commentaries written by the contributors on each others work Students and researchers in cognitive and visual science will find much to interest them in this thought provoking collection   **From Fragments to Objects** Thomas F. Shipley,Philip J. Kellman,2001-11-30 This book addresses the problem of how the human visual system organizes inputs that are fragmented in space and time into coherent stable perceptual units objects In doing so it addresses the following questions what kinds of segmentation and grouping abilities exist in human perceivers What information and computational processes achieve segmentation and grouping What are the psychological consequences of perceiving whole objects From Fragments to Objects Segmentation and Grouping in Vision takes a comprehensive cognitive science approach to object perception brings together separate lines of research in object perception in one volume gives an integrated and up to date review of theory and empirical research and offers directions for future study Jacket   *Neural Engineering* Chris Eliasmith,Charles H. Anderson,2003 A synthesis of current approaches to adapting engineering tools to the study of neurobiological systems   *Encyclopedia of Optical and Photonic Engineering (Print) - Five Volume Set* Craig Hoffman,Ronald Driggers,2015-09-22 The first edition of the Encyclopedia of Optical and Photonic Engineering provided a valuable reference concerning devices or systems that generate transmit measure or detect

light and to a lesser degree the basic interaction of light and matter This Second Edition not only reflects the changes in optical and photonic engineering that have occurred since the first edition was published but also Boasts a wealth of new material expanding the encyclopedia s length by 25 percent Contains extensive updates with significant revisions made throughout the text Features contributions from engineers and scientists leading the fields of optics and photonics today With the addition of a second editor the Encyclopedia of Optical and Photonic Engineering Second Edition offers a balanced and up to date look at the fundamentals of a diverse portfolio of technologies and discoveries in areas ranging from x ray optics to photon entanglement and beyond This edition s release corresponds nicely with the United Nations General Assembly s declaration of 2015 as the International Year of Light working in tandem to raise awareness about light s important role in the modern world Also Available Online This Taylor E mail e reference taylorandfrancis com International Tel 44 0 20 7017 6062 E mail online sales tandf co uk *National Library of Medicine Current Catalog* National Library of Medicine (U.S.),1992 Optic Flow and Beyond L.M. Vaina,Scott A. Beardsley,Simon K. Rushton,2004-04-30 Optic flow provides all the information necessary to guide a walking human or a mobile robot to its target Over the past 50 years a body of research on optic flow spanning the disciplines of neurophysiology psychophysics experimental psychology brain imaging and computational modelling has accumulated Today when we survey the field we find independent lines of research have now converged and many arguments have been resolved simultaneously the underpinning assumptions of flow theory are being questioned and alternative accounts of the visual guidance of locomotion proposed At this critical juncture this volume offers a timely review of what has been learnt and pointers to where the field is going *The Visual Neurosciences* John S. Werner (editor.),Leo M. Chalupa,2004 An essential reference book for visual science **Applications to Linguistics, Psychology and Neuroscience** Markus Werning,Edouard Machery,Gerhard Schurz,2013-05-02 The second volume is devoted to issues of compositionality that arouse in the sciences of language the investigation of the mind and the modeling of representational brain functions How could compositional languages evolve How many sentences are needed to learn a compositional language How does compositionality relate to the interpretation of texts the generation of idioms and metaphors and the understanding of aberrant expressions What psychological mechanism underlies the combination of complex concepts And finally what neuronal structure can possibly realize a compositional system of mental representations **The Evolutionary Basis of Strabismus and Nystagmus in Children** Michael C. Brodsky,2021-05-12 This text is a comprehensive collection and discussion of scientific essays that define the pathogenesis of common forms of pediatric strabismus and nystagmus in terms of their common evolutionary mechanisms The goal of this book is to assemble these essays to provide a definitive source for current clinicians to use along with follow up comments to help direct future scientific research in the field of pediatric ophthalmology This book includes 20 original essays written by Michael C Brodsky which mechanistically explain and unify such enigmatic conditions such as infantile esotropia latent nystagmus primary

oblique muscle overreaction action dissociated vertical divergence infantile nystagmus and intermittent exotropia in terms of ancestral evolutionary reflexes which become expressed in different ways to generate these disorders This collection of essays is poised to become a classic reference providing the necessary neurological framework for contextualizing unique ocular motor disorder and understanding the evolutionary mechanisms responsible for their development in early childhood Written with focused interest for pediatric ophthalmologists and neuro ophthalmologists this reference will also find audience with ophthalmologists neurologists evolutionary biologists and neuroscientists *Decision-making in invertebrates* Björn Brembs,2014-03-21 Not since Paul the octopus became famous during the 2010 soccer world cup have scientists realized that decision making is not a capacity exclusive to the so called higher animals Invertebrate animals show an amazing capacity for making decisions even if the external circumstances provide little or no information This Research Topic celebrates the diversity of decision making by showcasing the most well studied cases in a range of invertebrate species

Oxford Handbook of Face Perception Andy Calder,Gillian Rhodes,Mark Johnson,Jim Haxby,2011-07-28 The human face is unique among social stimuli in conveying such a variety of different characteristics A person s identity sex race age emotional state focus of attention facial speech patterns and attractiveness are all detected and interpreted with relative ease from the face Humans also display a surprising degree of consistency in the extent to which personality traits such as trustworthiness and likeability are attributed to faces In the past thirty years face perception has become an area of major interest within psychology with a rapidly expanding research base Yet until now there has been no comprehensive reference work bringing together this ever growing body of research The Oxford Handbook of Face Perception is the most comprehensive and commanding review of the field ever published It looks at the functional and neural mechanisms underlying the perception representation and interpretation of facial characteristics such as identity expression eye gaze attractiveness personality and race It examines the development of these processes their neural correlates in both human and non human primates congenital and acquired disorders resulting from their breakdown and the theoretical and computational frameworks for their underlying mechanisms With chapters by an international team of leading authorities from the brain sciences the book is a landmark publication on face perception For anyone looking for the definitive text on this burgeoning field this is the essential book

This book delves into Representations Of Vision Trends And Tacit Assumptions In Vision Research. Representations Of Vision Trends And Tacit Assumptions In Vision Research is an essential topic that needs to be grasped by everyone, from students and scholars to the general public. This book will furnish comprehensive and in-depth insights into Representations Of Vision Trends And Tacit Assumptions In Vision Research, encompassing both the fundamentals and more intricate discussions.
