Crother, 1999-06-02 Amphibians and reptiles are the most numerous diverse and frequently encountered animals on the Caribbean islands This book provides a variety of perspectives on this amazing group of organisms Caribbean Amphibians and Reptiles compiled by an international team of zoologists takes a fresh and detailed look at the complex biological puzzle of the Caribbean The first true overview of the islands it includes a historical examination of the people who have studied the Caribbean amphibians and reptiles The book reviews the ecology evolutionary history and biogeographic explanations for the origins and diversity of the region s fauna with island by island coverage It puts the Caribbean in perspective by comparing the islands to Central America and its amphibian reptile diversity Additionally the book includes figures tables and color plates which bring to life some of the region s most spectacular creatures Key Features Presents the first complete review of amphibians and reptiles in the Caribbean Includes color plates and island maps Contributors are recognized authorities in the field Reproductive Biology and Phylogeny of Snakes Robert D. Aldridge, David M. Sever, 2016-04-19 Offering coverage

of a wide range of topics on snake reproduction and phylogeny this comprehensive book discusses everything from primordial germ migration in developing embryos to semelparity death after reproduction in the aspic viper Beginning with a review of the history of snake reproductive studies it presents new findings on development **Hormones and Reproduction in Fishes, Amphibians, and Reptiles** David O. Norris, Richard E. Jones, 2012-12-06 Comparative endocrinology is one of the most rapidly developing subdisciplines within the field of endocrinology and it is having a significant impact on research at the molecular cellular organismal and environmental levels Much of the current ferment in

endocrinology is in reproductive endocrinology The purpose of this volume on hormones and reproduction in fishes amphibians and reptiles is to summarize our present understandings and to identify important research problems to be addressed in the area of comparative reproductive endocrinology It was inspired by the gathering at Copper Mountain Colorado of eminent endocrine scientists from around the world on the occasion of the Tenth International Symposium on Comparative Endocrinology in July 1985 While preparing for that meeting we decided that a special volume on reproductive endocrinology was needed to summarize what is known and to stimulate research in particular directions Why do we emphasize fishes amphibians and reptiles First knowledge about the reproductive endocrinology of these ectothermic vertebrates can provide a clearer picture of the evolution of reproductive hormones and their effects on target organs This comparative approach can lead to new theories about the evolution of reproductive control mechanisms Second studies concerning the reproductive endocrinology of lower vertebrates can result in development of model systems for application to studies of birds and mammals Indeed information about the patterns of reproductive control in ectothermic vertebrates can tell us which are evolutionarily stable and which are labile

Hormones and Reproduction of Vertebrates, Volume 3

Lizards in an Evolutionary Tree Jonathan B. Losos, 2011-02-09 In a book both beautifully illustrated and deeply informative Jonathan Losos a leader in evolutionary ecology celebrates and analyzes the diversity of the natural world that

the fascinating anoline lizards epitomize Readers who are drawn to nature by its beauty or its intellectual challenges or both will find his book rewarding Douglas J Futuyma State University of New York Stony Brook This book is destined to become a classic It is scholarly informative stimulating and highly readable and will inspire a generation of students Peter R Grant author of *How and Why Species Multiply The Radiation of Darwin's Finches* Anoline lizards experienced a spectacular adaptive radiation in the dynamic landscape of the Caribbean islands The radiation has extended over a long period of time and has featured separate radiations on the larger islands Losos the leading active student of these lizards presents an integrated and synthetic overview summarizing the enormous and multidimensional research literature This engaging book makes a wonderful example of an adaptive radiation accessible to all and the lavish illustrations especially the photographs make the anoles come alive in one's mind David Wake University of California Berkeley This magnificent book is a celebration and synthesis of one of the most eventful adaptive radiations known With disarming prose and personal narrative Jonathan Losos shows how an obsession beginning at age ten became a methodology and a research plan that together with studies by colleagues and predecessors culminated in many of the principles we now regard as true about the origins and maintenance of biodiversity This work combines rigorous analysis and glorious natural history in a unique volume that stands with books by the Grants on Darwin's finches among the most informed and engaging accounts ever written on the evolution of a group of organisms in nature Dolph Schluter author of *The Ecology of Adaptive Radiation* *Natural History of West Indian Reptiles and Amphibians* Robert W. Henderson, Robert Powell, 2009 The reference source that biologists interested in West Indian herpetofauna have been waiting for Steven Reichling curator Memphis Zoo A state of the art compendium The West Indies is one of the hottest of the world's biodiversity hot spots and will continue to be a focus of ecological research now invigorated by this definitive synthesis S Blair Hedges Pennsylvania State University The West Indies have become a major focus for biologists and conservationists Its herpetofauna is considered one of the richest and most vulnerable in the world These fragile natural environments are home to many unique animals that occur only on these islands Loss of habitat development of scenic areas for a burgeoning tourist industry and the introduction of invasive species have contributed to an already tenuous situation for many of the region's native species This volume summarizes the natural history of each of the more than seven hundred species of frogs and reptiles that live in the West Indies Sure to be the starting point for all future research on West Indian amphibians and reptiles it will be an essential companion to the biologist contemplating or conducting research in the area

Sperm Competition and Sexual Selection Tim R. Birkhead, Anders Pape Møller, 1998-08-12 Sperm Competition and Sexual Selection presents the intricate ways in which sperm compete to fertilize eggs and how this has prompted reinterpretations of breeding behavior This book provides a theoretical framework for the study of sperm competition which is a central part of sexual selection It also discusses the roles of females and the relationships between paternal care in sperm competition The chapters focusing on taxonomic development are diverse and

cover all the major animal groups both vertebrate and invertebrate and plants The final chapter provides an overview discussing the relationship between sperm competition and sexual selection in terms of both function and mechanism and how these translate into species fitness This book will be of prime interest to behaviorists ecologists and evolutionary biologists suggesting new avenues of research and new ways of approaching old problems The only up to date summary of a central and popular subject Well known editors and authors Provides a theoretical framework for the study of sperm competition Covers all major animal groups Includes a chapter on plants

Hormones and Reproduction of Vertebrates, Volume 3 David O. Norris, Kristin H. Lopez, 2011-05-04 This series of volumes represents a comprehensive and integrated treatment of reproduction in vertebrates from fishes of all sorts through mammals It is designed to provide a readable coordinated description of reproductive basics in each group of vertebrates as well as an introduction to the latest trends in reproductive research and our understanding of reproductive events Whereas each chapter and each volume is intended to stand alone as a review of that topic or vertebrate group respectively the volumes are prepared so as to provide a thorough topical treatment across the vertebrates Terminology has been standardized across the volumes to reduce confusion where multiple names exist in the literature and a comprehensive glossary of these terms and their alternative names is provided A complete essential and up to date reference for research scientists working on vertebrate hormones and reproduction and on animals as models in human reproductive research Covers the endocrinology neuroendocrinology physiology behaviour and anatomy of vertebrate reproduction Structured coverage of the major themes for all five vertebrate groups allows a consistent treatment for all Special chapters elaborate on features specific to individual vertebrate groups and to comparative aspects similarities and differences between them

Biogeography and Ecology of New Guinea J.L. Gressitt, 2012-12-06 J L Gressitt New Guinea is a fantastic island unique and fascinating It is an area of incredible variety of geomorphology biota peoples languages history traditions and cultures Diversity is its prime characteristic whatever the subject of interest To a biogeographer it is tantalizing as well as confusing or frustrating when trying to determine the history of its biota To an ecologist and to all biologists it is a happy hunting ground of endless surprises and unanswered questions To a conservationist it is like a dream come true a flash back of a few centuries as well as a challenge for the future

New Guinea is so special that it is hard to compare it with other islands or tropical areas. It is something apart with its very complicated history chapters I 2 4 II 1 4 III I VI I 2. It is partly old but to a great extent very young yet extremely rich and complex. It has biota of different sources to such a degree that it is still disputed in this volume as to what Realm it belongs to: the Paleotropical or Notogaeian, Australian or what Region, Oriental, Oceanic, Papuan or Australian. The terms Papuan, Indo-Australian and Australasian also have been applied to the area.

Marshall's Physiology of Reproduction: Reproductive cycles of vertebrates Francis Hugh Adam Marshall, 1984

Environmental Endocrinology I. Assenmacher, D.S. Farner, 2013-03-07. From 11 to 15 July 1977 about 60 physiologists, endocrinologists, ecologists and other biologists from 14 countries convened at the University of Montpellier for a symposium on Environmental Endocrinology. This meeting was organized as a Satellite Symposium of the 27th International Congress of Physiological Sciences, Paris 18-23 July 1977. This volume is a record of the communications presented at the symposium. The objectives of the program were to examine the role of the endocrine system in a wide spectrum of adjustments and adaptations to changes in environmental conditions by various species of animals including man and to promote an exchange of ideas among investigators who have approached these functions from diverse aspects. The diversity of the information and ideas communicated is great. Of necessity they represent only an extremely modest selection of the many facets of endocrine function in the interaction of animals with their environments. Beyond the usefulness of the communications individually we hope that they collectively demonstrate the substantial heuristic value of the concept of environmental endocrinology as it was perceived by the participants. We acknowledge gratefully the kindness and sympathy of Professor Jacques ROUZAUD, President of the University of Montpellier II for his generous extension of the hospitality of the University to the Symposium. We are most grateful to Mrs Monique VIEU who effected so well the secretarial organization of the Symposium.

Organizational Constraints on the Dynamics of Evolution John Maynard Smith, G. Vida, 1990. Selected papers from a symposium in Budapest held June 29-July 3, 1987 are arranged in five parts: constraints in the origin of life and cellular organization; developmental constraints in evolution; genetical constraints in evolution; life history and evolution; and the shaping of the macroevolutionary pattern. The 31 contributions are united by a common approach to the rigorous mathematical analysis and description of the processes of natural selection. Distributed by St Martin's Press. Vertebrate Biology Robert Thomas Orr, 1982. Comprehensive study of vertebrates. Includes a chapter on vertebrate ancestry and enlarges the chapter on distribution by including ecological factors that govern vertebrates.
