Robin L. Chazdon, T. C. Whitmore, 2002 This book presents a timely collection of pioneering work in the study of these diverse and fascinating ecosystems It consists of facsimiles of papers chosen by world experts in tropical biology as the classics in the field **Reproductive Biology and Phylogeny of Anura** B G M Jamieson, 2003-01-08 This book covers the major

aspects of phylogeny and reproductive biology of frogs in chapters written by major authorities Topics treated are anuran phylogeny classification and reproductive modes gross anatomy of the reproductive system oogenesis endocrinology of reproduction spermatogenesis and the mature spermatozoon breeding glands etc **The Reproductive Biology of**

**Amphibians** D. Taylor, 2013-06-29 Parental Care: Evolution, Mechanisms, And Adaptive Significance, 1996-11-18

*Advances in the Study of Behavior* presents its first thematic volume focusing on the physiological and behavioral mechanisms underlying parental care The book discusses parental care both within and across taxa with coverage of invertebrates and early vertebrates fishes amphibians reptiles mammals birds and nonhuman primates A running theme throughout the chapters shows that parental care is anchored to the ecology reproductive physiology and embryonic development of a species Coverage also includes mechanisms of parental care including analysis of the stimuli that parents respond to and how parental care is initiated maintained and terminated Individual differences within species are also explored examining stable differences in maternal style how they arise and the consequences for both mother and infant

**Reproductive Biology of South American Vertebrates** William C. Hamlett, 2012-12-06 South America is one of the few areas of the world that includes vast areas of as yet undisturbed natural habitats These areas are home to as many as half the world's species of plants and animals Many of the animals inhabiting these areas are of direct and immediate economic importance while others are of unknown potential value With economic development of these areas there is a coincident disruption of natural habitats that have a direct impact on the reproductive capabilities of the affected species Re

production is central to the survival of all species and regardless of the environmental stresses imposed on them scientific attention must be focused on reproductive biology as a way to deal with these pressures. It is vitally important to gather as much research data as possible on the reproductive biology of the species on this continent in order to provide governmental agencies and scientists with the most accurate information on which to base decisions regarding development. This volume is intended to draw attention to these pressing matters by gathering a wide representation of scientists actively engaged in reproduction research relating to South American vertebrates. It is intended that this volume will serve as a resource for individuals and organizations interested in reproductive biology and species survival. An additional benefit is that economically important species as well as potentially important ones such as sharks will be discussed.

**Herpetological Communities** Norman J. Scott, 1982 *Reproductive Technologies and Biobanking for the Conservation of Amphibians* Aimee J. Silla, Andy J. Kouba, Harold Heatwole, 2022-10-03

How to decelerate loss of global biodiversity is one of the greatest challenges of our generation. Reproductive technologies have enormous potential to assist the recovery of species by enhancing reproductive output, facilitating genetic management and supporting reintroduction of threatened species. Of particular value are cryopreservation technologies coupled with the establishment of global gene banks to conserve in perpetuity the remaining extant genetic diversity of threatened amphibians. *Reproductive Technologies and Biobanking for the Conservation of Amphibians* brings together leading experts in the field to provide a comprehensive overview of current best practices, summarise technological advancements and present a framework for facilitating the integration of reproductive technologies and biobanking into conservation breeding programs for threatened amphibians. It is an invaluable reference for the next generation of conservation practitioners, captive breeding facilities, researchers and policy makers involved with biodiversity conservation.

**Wildlife Review**, 1993 **Extinction in Our Times** James P. Collins, Martha L. Crump, 2009-07-07

For over 350 million years thousands of species of amphibians have lived on earth but since the 1990s they have been disappearing at an alarming rate in many cases quite suddenly and mysteriously. What is causing these extinctions? What role do human actions play in them? What do they tell us about the overall state of biodiversity on the planet? In *Extinction in Our Times* James Collins and Martha Crump explore these pressing questions and many others as they document the first modern extinction event across an entire vertebrate class using global examples that range from the Sierra Nevada of California to the rainforests of Costa Rica and the Mediterranean coast of North Africa. Joining scientific rigor and vivid storytelling, this book is the first to use amphibian decline as a lens through which to see more clearly the larger story of climate change, conservation of biodiversity and a host of profoundly important ecological, evolutionary, ethical, philosophical and sociological issues.

*Vertebrate Biology* Donald W. Linzey, 2012-02-13

Arranged logically to follow the typical course format, *Vertebrate Biology* leaves students with a full understanding of the unique structure, function and living patterns of the subphylum that includes our own species.

*An Introduction to the Amphibians of Ecuador* Luis A.

Coloma, William E. Duellman, 2024-12-27 *An Introduction to the Amphibians of Ecuador* is the first of four volumes which are comprehensive well illustrated and authoritative works making them invaluable to biologists conservationists and others This initial volume delves into the cultural history of amphibians encompassing ethnobatrachology and folklore while summarizing the amphibian iconography found in Ecuadorian archaeology Moreover it covers topics such as bioprospecting sustainable management and biotrade activities The history and present state of amphibian biology research are also addressed Furthermore it explores in comprehensive detail the rich amphibian diversity of Ecuador providing a thorough review of biogeography amphibian declines and conservation Subsequent volumes list the characteristics of each species define each taxon and compare them to similar other species Natural history and reproductive behavior where known are described as are data on vocalizations larvae and ontogenetic changes Amphibian distributions are illustrated with physiographic maps with dots Each volume addresses the declines extinctions and conservation status of each species and provides notations of their occurrence in reserves

**KEY FEATURES** Summarizes the ethnozoological aspects of amphibians Provides a thorough history of research Introduction to three volumes providing accounts for each of the 3 orders 19 families 78 genera and over 650 species from Ecuador

**Infanticide** Glenn Hausfater, Sarah Blaffer Hrdy, 2017-07-12 Recent field studies of a variety of mammalian species reveal a surprisingly high frequency of infanticide the killing of unweaned or otherwise maternally dependent offspring Similarly studies of birds fish amphibians and invertebrates demonstrate egg and larval mortality in these species a phenomenon directly analogous to infanticide in mammals In this collection Hausfater and Hrdy draw together work on animal and human infanticide and place these studies in a broad evolutionary and comparative perspective Infanticide presents the theoretical background and taxonomic distribution of infanticide infanticide in nonhuman primates infanticide in rodents and infanticide in humans It examines closely sex allocation and sex ratio theory surveys the phylogeny of mammalian interbirth intervals and reviews data on sources of egg and larval mortality in a variety of invertebrate and lower vertebrate species Dealing with infanticide in nonhuman primates two chapters critically examine data on infanticide in langurs and its broader theoretical implications By reviewing sources of infant mortality in populations of small mammals and new laboratory analyses of the causes and consequences of infanticide this work explores such issues as the ontogeny of infanticide proximate cues of infants and females which elicit infanticidal behavior in males the genetical basis of infanticide and the hormonal determinants Hausfater and Sarah Blaffer Hrdy through their selection of materials for this book evaluate the frequency causes and function of infanticide Historical ethnographic and recent data on infanticide are surveyed Infanticide summarizes current research on the evolutionary origins and proximate causation of infanticide in animals and man As such it will be indispensable reading for anthropologists and behavioral biologists as well as ecologists psychologists demographers and epidemiologists

*Potential Impacts of Climate Change on Tropical Forest Ecosystems* Adam Markham, 2013-11-11 Climate change represents one of the most alarming long term threats to ecosystems the world over

This new collection of papers provides for the first time an overview of the potentially serious impact that climate change may have on tropical forests. The authors, a multi-disciplinary group of leading experts in climatology, forestry, ecology and conservation biology, present a state of knowledge snapshot of how tropical forests are likely to react to the changes being wrought on our planet's atmosphere and climate. Tropical forests represent extraordinary harbours for biological diversity and yet, as deforestation and degradation continue apace, they are under greater pressure from human impacts than ever before. Climate change adds yet another threat to these valuable ecosystems and this volume demonstrates just how significant a problem this may really be. The authors identify certain types of forest, including tropical montane cloud forest, that may be particularly vulnerable. They also show the strong likelihood of global warming aggravating problems in already fragmented forest areas. *Proceedings of The Academy of Natural Sciences (Vol. 127, 1975)*, Wildlife Abstracts U.S. Fish and Wildlife Service, 1954

**Animal Communication and Noise** Henrik Brumm, 2013-12-16 The study of animal communication has led to significant progress in our general understanding of motor and sensory systems, evolution and speciation. However, one often neglected aspect is that signal exchange in every modality is constrained by noise, be it in the transmission channel or in the nervous system. This book analyses whether and how animals can cope with such constraints and explores the implications that noise has for our understanding of animal communication. It is written by leading biologists working on different taxa, including insects, fish, amphibians, lizards, birds and mammals. In addition to this broad taxonomic approach, the chapters also cover a wide array of research disciplines, from the mechanisms of signal production and perception to the behavioural ecology of signalling, the evolution of animal communication and conservation issues. This volume promotes the integration of the knowledge gained by the diverse approaches to the study of animal communication and at the same time highlights particularly interesting fields of current and future research. **Wildlife Research Report**, 1972
