

FROG 2001-2002

GENUS: *Phyllorhina*

## BROAD-PALMED ROCKET FROG

A small frog with a pointed snout and horizontal pupils. It has very small discs on the tips of its fingers and toes. The fingers lack webbing while the toes are fully webbed except for the fifth toe which is less than half-webbed. The hind feet have a small hard pad on the inside edge and a minute pad on the outside edge of the sole. The skin is smooth above with a few scattered warts and granular below. There are large colour variations between populations and more than one species probably shares this name. It is generally pale fawn to dark brown above with variable soft, darker blotches. A dark streak runs from the nose through the eye and sardium to the flank, broken by a pale blotch in front of the eye which curves down below the eye to the shoulder. Dark blotches mottle the sides and the groin is blotched with brown and yellow. The backs of the thighs are patterned with yellow and dark brown, while the belly is whitish.

**Behaviour** This agile, ground-dwelling frog forages in the leaf litter at night, and avoids potential predators by making fast, high leaps if disturbed. It rests by day under the cover of rocks, logs and plant debris, and forages widely after dark over the forest or woodland floor, sometimes well away from water. Breeding males congregate around the edges of ponds and other watercourses including dams, flood plains and fast-flowing rivers on warm, wet nights in spring and summer. They call from the edge of a pond or nearby damp site, setting up a chorus of loud, sharp, repeated, quacking or yapping calls.

**Development** They breed in spring and summer, and females lay loose clumps of up to 250 small eggs among vegetation in the shallow water of a pond. The eggs often sink to the bottom and hatch 3-6 days later into sandy gird tadpoles. They metamorphose into young frogs when they are about 35 mm long at 50-60 days.

**Diet** Mainly insects and other arthropods. **Habitat** Open forests, woodlands, open country and river flood plains along the coast, ranges and western plains. Outside the breeding season it is often found well away from waterways.

LENGTH: To 60 mm

VOICE: Low rib.

FROG 2001-2002

GENUS: *Litoria*

## STONY CREEK FROG

## LESUR'S FROG

A medium-sized frog, with a horizontal pupil and a streamlined body with long legs. It has very small discs on the tips of the fingers and toes. The fingers are unwebbed, while the toes have well-developed webbing. The skin above is smooth and varies from bright yellow in breeding males to pale fawn or dark brown, sometimes with a few scattered darker flecks and irregular black spots on the sides. A dark streak runs along the side of the head from the tip of snout, through the eye and over the sardium to the shoulder, usually with a narrow pale border above. The skin is whitish below, granular on the belly and smooth on the throat. Populations north of Sydney have yellow and black groin markings, and those to the south have blue and black groin markings. Males are much smaller than females.

**Behaviour** This frog is predominantly ground-dwelling, and rests during the day beneath rocks and in crevices by the water, or in the open, blending in with its surroundings. It is active at night and roams widely outside the breeding season, covering large distances, foraging for food among leaf litter and sometimes in low vegetation along the banks of waterways. It favours rocky creeks strewn with smooth boulders, and is often seen crossing roads on wet nights. It is very agile and escapes danger by making fast, powerful leaps. In the breeding season males find and defend territories close to the edge of creeks and ponds, choosing raised sites about 1-2 m apart. Hind males are kept away from the best calling sites by the agitated calling of resident males. They take a vocal sac and produce a purring trill, repeated for 2-3 seconds, and begin calling some time before the females arrive. **Development** They breed from August to May and mate underwater, lying on the bottom in the quiet reaches

of a stream. The eggs (about 3.5 mm diameter) are laid in clumps of about 500 and stick to rocks or pebbles in flowing water. In northern Qld females make shallow nests in exposed sandy creek banks, about 250 mm across and 30 mm deep, and lay their eggs in the nest. **Diet** Insects, cockroaches, beetles, other arthropods and small vertebrates, including frogs.

**Habitat** Heaths, sclerophyll forests, woodlands, rainforests and urban areas, along the coast, nearby ranges and slopes, often around shallow rocky creeks, but may be found some distance from water.

LENGTH: To 70 mm

VOICE: Low rib.
