This book is the result of the 11th International Conference on Information Systems Development Methods and Tools Theory and Practice held in Riga Latvia September 12-14 2002. The purpose of this conference was to address issues facing academia and industry when specifying developing managing reengineering and improving information systems. Recently many new concepts and approaches have emerged in the Information Systems Development (ISD) field. Various theories, methodologies, methods and tools available to system developers also created new problems such as choosing the most effective approach for a specific task or solving problems of advanced technology integration into information systems. This conference provides a meeting place for ISD researchers and practitioners from Eastern and Western Europe as well as from other parts of the world. Main objectives of this conference are to share scientific knowledge and interests and to establish strong professional ties among the participants. The 11th International Conference on Information Systems Development (ISD 02) continues the tradition started with the first Polish Scandinavian Seminar on Current Trends in Information Systems Development Methodologies held in Gdansk Poland in 1988. Through the years this Seminar has evolved into the International Conference on Information Systems Development (ISD 02) is the first ISD conference held in Eastern Europe namely in Latvia one of the three Baltic countries. *Innovations in Information Systems Modeling: Methods and Best Practices* Halpin, Terry, Krogstie, John, Proper, Erik, 2009-03-31. Covers central topics in information systems modeling and architectures. Includes the latest developments in information systems modeling methods and best practices.

Process-Aware Information Systems Marlon Dumas, Wil M. van der Aalst, Arthur H. ter Hofstede, 2005-09-28. A unifying foundation to design and implement process aware information systems. This publication takes on the formidable task of establishing a unifying foundation and set of common underlying principles to effectively model design and implement process aware information systems. Authored by leading authorities and pioneers in the field, *Process Aware Information Systems* helps readers gain a thorough understanding of major concepts, languages and techniques for building process aware applications including UML and EPCs, two of the most widely used notations for business process modeling. Concrete techniques for process design and analysis, process execution standards WfMC and BPEL, representative commercial tools ARIS, TIBCO Staffware and FLOWer. Each chapter begins with a description of the problem domain and then progressively unveils relevant concepts and techniques. Examples and illustrations are used extensively to clarify and simplify complex material. Each chapter ends with a set of exercises ranging from simple questions to thought provoking assignments. Sample solutions for many of the exercises are available on the companion Web site. Armed with a new and deeper understanding, readers are better positioned to make their own contributions to the field and evaluate various approaches to a particular task or problem. This publication is recommended as a textbook for graduate and advanced undergraduate students in
