

## Qualitative Research Introduction

---

*"Data analysis is a systematic search for meaning. It is a way to process qualitative data so that what has been learned can be communicated to others. Analysis means organizing and interrogating data in ways that allow researchers to see patterns, identify themes, discover relationships, develop explanations, make interpretations, mount critiques, or generate theories. It often involves synthesis, evaluation, interpretation, categorization, hypothesizing, comparison, and pattern finding. It always involves what H. F. Wolcott calls "mindwork". . . Researchers always engage their own intellectual capacities to make sense of qualitative data."* (Hatch 2002, 148)

### An Introduction

This document is meant to be an introduction to qualitative research for those already familiar with quantitative research. Throughout this document, the two approaches will often be compared to illustrate the distinctive elements of qualitative research. Please note that the Research Support Group does view either methodological approach as superior to the other. The research question is the best determinant of the most appropriate methodology or a combination of the two.

### Qualitative vs Quantitative: Questions & Approach

In comparison to quantitative research, qualitative inquiry employs different philosophical assumptions; strategies of inquiry; and methods of data collection, analysis and interpretation (Creswell 2009, 173). A qualitative approach emphasizes the qualities of entities, processes and meanings that are not experimentally examined or measured in terms of quantity, amount, intensity or frequency (Denzin and Lincoln 2000, 8). Put another way, quality refers to a thing's essence and ambience - the what, how, when and where of it. Qualitative research thus refers to the meanings, concepts, definitions, characteristics, metaphors, symbols and description of things (Berg 2007). The research questions often stress how social experience is created and given meaning. The value-laden nature of such an inquiry stresses the relationship between the researcher and subject(s), as well as the situational constraints that shape the inquiry (Denzin and Lincoln 2011).

It may be helpful to review a list of characteristics common to several qualitative methods. Though the list below is not exhaustive (Creswell 2009, 175-6), it offers a sense of well-known qualitative research methods.

- Research is often conducted in the field, allowing direct interaction with the people being studied in their context.
- Researchers collect data themselves by examining documents, observing behavior or interviewing participants.
- Multiple sources of data are preferred over a single source; this requires the researcher to review all data, make sense of it and organize it into categories or themes that cut across all sources.
- Researchers often build their patterns, categories and themes from the bottom up (inductive analysis).

**Accountability in Social Research** Norma R.A. Romm, 2001-05-31 The book considers issues relating to accountability in social research by juxtaposing seven ways of approaching the issues and by moving toward the development of a particular approach to the earning of trust on the part of researchers A conception of the practice and assessment of discursive accountability is presented as an option for consideration The book grapples with the issue of accountability in social research by considering the extent to which and ways in which it is addressed in a number of different positions regarding the practice of social science The focus of the book is on reviewing discourses around the practice of professional inquiry with a view to highlighting differing arguments around the question of what it might mean to assess researchers' accountabilities The book is structured around considering in detail various views on accountability in relation to one another A comprehensive comparison of arguments is presented in the first two chapters of the book The debate that is set up in the first two chapters forms the background to the elaboration and development in Chapter 3 of constructivist argumentation in relation to the question of how accounts as set forth by researchers should be treated by colleagues participants and other audiences The continuing debate about the status to be afforded to constructions developed by researchers is tackled in this chapter Constructivist thinking is then extended toward what is named in the book a trusting constructivist position This position focuses on ways in which trust earning and trust awarding in the context of social inquiry can proceed without researchers having to justify themselves as striving to gain access to knowledge as representation of reality Through the development of the trusting constructivist position the book explores ways of creating trust through processes of social discourse An assessment of actual research projects in view of the debates set up in earlier chapters then takes place Through these

assessments readers can relate the details of the arguments developed in earlier chapters to their implications for judging the practice of accountable social inquiry
