Research in Landscape Architecture Adri van den Brink, Diedrich Bruns, Hilde Tobi, Simon Bell, 2016-11-10 Defining a research question describing why it needs to be answered and explaining how methods are

selected and applied are challenging tasks for anyone embarking on academic research within the field of landscape architecture. Whether you are an early career researcher or a senior academic, it is essential to draw meaningful conclusions and robust answers to research questions. *Research in Landscape Architecture* provides guidance on the rationales needed for selecting methods and offers direction to help to frame and design academic research within the discipline. Over the last couple of decades, the traditional orientation in landscape architecture as a field of professional practice has gradually been complemented by a growing focus on research. This book will help you to develop the connections between research, teaching, and practice to help you to build a common framework of theory and research methods. Bringing together contributions from landscape architects across the world, this book covers a broad range of research methodologies and examples to help you conduct research successfully. Also included is a study in which the editors discuss the most important priorities for the research within the discipline over the coming years. This book will provide a definitive path to developing research within landscape architecture.

Methods of the Policy Process Christopher M. Weible, Samuel Workman, 2022-04-28. The increasingly global study of policy processes faces challenges with scholars applying theories in radically different national and cultural contexts. Questions frequently arise about how to conduct policy process research comparatively and among this global community of scholars. *Methods of the Policy Process* is the first book to remedy this situation not by establishing an orthodoxy or imposing upon the policy process community a rigid way of conducting research but instead by allowing the leading researchers in the different theoretical traditions a space to share the means by which they put their research into action. This edited volume serves as a companion volume and supplemental guide to the well-established *Theories of the Policy Process*. 4th Edition. *Methods of the Policy Process* acknowledges that growth and advancement in the study of the policy process is dependent not merely on conceptual and theoretical development but also on developing and systematizing better methodological approaches to measurement and analysis. To maximize student engagement with the material, each chapter follows a similar framework: introduction of a given theory of the policy process, application of that theory including best practices for research design, conceptualization, major data sources, data collection, and methodological approaches, critical assessment, future directions, and often online resources including datasets, survey instruments, and interview and coding protocols. While the structure and focus of each chapter varies slightly according to the theoretical tradition being discussed, each chapter's central aim is to prepare readers to confidently undertake common methodological strategies themselves. *Methods of the Policy Process* is especially beneficial to people new to the field, including students enrolled in policy process courses, as well as those without access to formal training. For scholars experienced in applying theories, this edited volume is a helpful reference to clarify best practices in research methods.
