Radar Calculations Using Personal Computers William A. Skillman, 1984 **Radar Calculations Using Personal Computers** William A. Skillman, **Antenna Design Using Personal Computers** David M. Pozar, 1985 **Radar Equations for Modern Radar** David Knox Barton, 2013 Based on the classic Radar Range Performance Analysis from 1980 this practical volume extends that work to ensure applicability of radar equations to the design and analysis of modern radars This unique book helps you identify what information on the radar and its environment is needed to predict detection range Moreover it provides equations and data to improve the accuracy of range calculations You find detailed information on propagation effects methods of range calculation in environments that include clutter jamming and thermal noise as well as loss factors that reduce radar performance This invaluable book is supported with nearly 200 illustrations and over 430 equations **Phase Noise Analysis in Radar Systems Using Personal Computers** Stanley J. Goldman, 1989-05-12 A reference source for phase noise effects on systems and components Analyzes the effects of phase noise on a radar system s performance and on its major subsystems Sequence of chapters follows the path of phase noise in a radar system from its generation through its transmission reception and processing to its final displayed level Discusses major radar design areas pertaining to the analysis of phase noise effects on system performance Includes solved practical problems and computer programs *Modern Radar Systems* Hamish Meikle, 2008 This revised and updated edition to the popular Artech House book Modern Radar Systems offers complete and current coverage of the subject including new material on accuracy resolution and convolution and correlation The book features more than 540 illustrations drawn in Maple V that offer a greater understanding of various waveforms and other two and three dimensional functions to help you more accurately analyze radar system performance The effects of pulse shaping on transmitter stability and spectra are discussed a topic which is becoming more and more important in the age of electromagnetic compatibility The book addresses the importance of low attenuation and reflection between the main radio frequency blocks including the use of oversized waveguides for long runs *Multiple-target Tracking with Radar Applications* Samuel S. Blackman, 1986 *Radar Systems Analysis and Design Using MATLAB* Bassem R. Mahafza, 2022-03-28 The first edition of this ground breaking and widely used book introduced a comprehensive textbook on radar systems analysis and design providing hands on experience facilitated by its companion MATLAB software The book very quickly turned into a bestseller Based on feedback provided by several users and drawing from the author s own teaching experience the 4th edition adopts a new approach The presentation in this edition takes the reader on a scientific journey whose major landmarks comprise the different radar sub systems and components Along the way the different relevant radar subsystems are analyzed and discussed in great level of detail Understanding the radar signal types and their associated radar signal processing techniques are key to understating how radar systems function Each chapter provides the necessary mathematical and analytical coverage required for a sound understanding of radar

theory Additionally dedicated MATLAB functions programs enhance the understanding of the theory and establish a means to perform radar system analysis and design trades The software provides users with numerous varieties of graphical outputs Additionally a complete set of MATLAB code that generates all plot and graphs found within the pages of this textbook are also available All companion MATLAB code can be downloaded from the book s web page The 4th Edition Takes advantage of the new features offered by MATLAB 2021 release Brings the text to a current state of the art Incorporates much of the feedback received from users using this book as a text and from practicing engineers accordingly several chapters have been rewritten Presents unique topics not found in other books Maintains a comprehensive and exhaustive presentation Restructures the presentation to be more convenient for course use Provides a post course reference for engineering students as they enter the field Offers a companion solutions manual for instructors The 4th edition will serve as a valuable tool to students and radar engineers by helping them better analyze and understand the many topics of radar systems This book is written primarily as a graduate level textbook although parts of it can be used as a senior level course A companion solutions manual has been developed for use by instructors *Radar System Analysis and Modeling* David K.

Barton,2004-10-01 A thorough update to the Artech House classic Modern Radar Systems Analysis this reference is a comprehensive and cohesive introduction to radar systems design and performance estimation It offers you the knowledge you need to specify evaluate or apply radar technology in civilian or military systems The book presents accurate detection range equations that let you realistically estimate radar performance in a variety of practical situations With its clear easy to understand language you quickly learn the tradeoffs between choice of wavelength and radar performance and see the inherent advantages and limitations associated with each radar band You find modeling procedures to help you analyze enemy systems or evaluate radar integrated into new weapon systems The book covers ECM and ECCM for both surveillance and tracking to help you estimate the effects of active and passive ECM select hardware software for reconnaissance or jamming and plan the operation of EW systems As radar systems evolve this book provides the equations needed to calculate and evaluate the performance of the latest advances in radar technology **Radar Evaluation Handbook** David Knox

Barton,Charles Emerson Cook,Paul Charles Hamilton,ANRO Engineering, Inc,1991 This book describes the steps involved in the evaluation of radar design and performance without complicated math Easily understood by both engineers and non technical personnel it contains a comprehensive discussion of the complex factors involved in the radar design process

Electronic Intelligence, the Interception of Radar Signals Richard G. Wiley,1985 **Introduction to Electronic Warfare** D. Curtis Schleher,1986 This book clearly describes all the radar detection and jamming equations you need to design and analyze search and track radars It reviews the hardware theories and techniques involved in modern EW systems signal processing and discusses present and future trends in EW technology **Methods of Optimal Statistical Decisions, Optimal Control, and Stochastic Differential Equations** Ellida M. Khazen,2009-11-16 This book provides the

reader with some insight into the mathematical models of random processes with continuous time stochastic differential equations and stochastic integrals An advanced development of the mathematical methods of optimal statistical decisions statistical sequential analysis and informational estimation of risks and new methods and solutions to the important problems of the theory of optimal control are presented The new original results obtained by this author and published shortly in her numerous scientific research papers are presented in a systematic way in this book The book is intended for engineers students post graduate students and scientist researchers The presentation of the material is accessible to engineers

Radar Engineer's Sourcebook William C. Morchin,1993 A distillation of technical material culled from key radar publications and conferences that have occurred over the past five years this book provides access to the answers to common design problems with designer crib sheets William Morchin has also written *Airborne Early Warning Radar* **Scientific and Technical Aerospace Reports** ,1995 High Resolution Radar Donald R. Wehner,1987 *Clinical Nuclear Medicine Physics with MATLAB®* Maria Lyra Georgosopoulou,2021-09-30 The use of MATLAB in clinical Medical Physics is continuously increasing thanks to new technologies and developments in the field However there is a lack of practical guidance for students researchers and medical professionals on how to incorporate it into their work Focusing on the areas of diagnostic Nuclear Medicine and Radiation Oncology Imaging this book provides a comprehensive treatment of the use of MATLAB in clinical Medical Physics in Nuclear Medicine It is an invaluable guide for medical physicists and researchers in addition to postgraduates in medical physics or biomedical engineering preparing for a career in the field In the field of Nuclear Medicine MATLAB enables quantitative analysis and the visualization of nuclear medical images of several modalities such as Single Photon Emission Computed Tomography SPECT Positron Emission Tomography PET or a hybrid system where a Computed Tomography system is incorporated into a SPECT or PET system or similarly a Magnetic Resonance Imaging system MRI into a SPECT or PET system Through a high performance interactive software MATLAB also allows matrix computation simulation quantitative analysis image processing and algorithm implementation MATLAB can provide medical physicists with the necessary tools for analyzing and visualizing medical images It is useful in creating imaging algorithms for diagnostic and therapeutic purposes solving problems of image reconstruction processing and calculating absorbed doses with accuracy An important feature of this application of MATLAB is that the results are completely reliable and are not dependent on any specific cameras and workstations The use of MATLAB algorithms can greatly assist in the exploration of the anatomy and functions of the human body offering accurate and precise results in Nuclear Medicine studies KEY FEATURES Presents a practical case based approach whilst remaining accessible to students Contains chapter contributions from subject area specialists across the field Includes real clinical problems and examples with worked through solutions Maria Lyra Georgosopoulou PhD is a Medical Physicist and Associate Professor at the National and Kapodistrian University of Athens Greece Photo credit The Antikythera Mechanism is the world s oldest known
