

1. The first step in the process of the scientific method is to ask a question.

2. The second step is to do background research.

3. The third step is to form a hypothesis.

4. The fourth step is to test the hypothesis by conducting an experiment.

THE SCIENTIFIC METHOD AND THE PAPER AIRPLANE

Now let's see how the scientific method can be applied to a simple experiment.

1. Ask a question:
What factors affect the flight of a paper airplane?

2. Do background research:
Read books and articles about aerodynamics and paper airplanes.

3. Form a hypothesis:
If I change the wing shape, then the flight distance will increase.

Restoration of Walking for Paraplegics Antonio Pedotti, Maurizio Ferrarin, 1992 **Journal of Rehabilitation Research and Development**, 1991 **Journal of Rehabilitation R & D**, 1997 **Journal of Rehabilitation Research & Development**, 1988 *Rehabilitation R & D Progress Reports*, 1997 [Implantable Neuroprostheses for Restoring Function](#) Kevin Kilgore, 2015-02-24 Research and developments in neuroprostheses are providing scientists with the potential to greatly improve the lives of individuals who have lost some function Neuroprostheses can help restore or substitute motor and sensory functions which may have been damaged as a result of injury or disease However these minute implantable sensors also provide scientists with challenges This important new book provides readers with a comprehensive review of neuroprostheses Chapters in part one are concerned with the fundamentals of these devices Part two looks at neuroprostheses for restoring sensory function whilst part three addresses neuroprostheses for restoring motor function The final set of chapters discusses significant considerations concerning these sensors Systematic and comprehensive coverage of neuroprostheses Covers the fundamentals of neuroprostheses their application in restoring sensory and motor function and an analysis of the future trends Keen focus on industry needs in the field of biomaterials **The Physiological Basis of Rehabilitation Medicine** John A. Downey, Stanley J. Myers, Erwin G. Gonzalez, 2013-10-22 The Physiological Basis of Rehabilitation Medicine Second Edition presents a comprehensive examination of the management of patients with functional impairments due to disease or trauma It discusses the distinction between disabilities and impairments per se It addresses the method in which the human body adapts and compensates for the stress produced by physical injuries Some of the topics covered in the book are the physiology of cerebellum and basal ganglia description of upper and lower motor neurons anatomy of the vascular supply to the brain characteristics of the autonomic nervous system structure chemistry and function of skeletal muscle the receptors in muscle and cardiopulmonary physiology The role of muscle spindles in perception of limb position and movement is fully covered An in depth account of the physiology of synovial joints and articular cartilage are provided The cellular and glandular components of the skin are completely presented A chapter is devoted to the factors involve in wound healing Another section focuses on the nerve conduction and neuromuscular transmission The book can provide useful information to doctors dermatologists students and researchers **Physical Rehabilitation** Susan B O'Sullivan, Thomas J Schmitz, George Fulk, 2019-01-25 Rely on this comprehensive curriculum spanning text and reference now and throughout your career You ll find everything you need to know about the rehabilitation management of adult patients from integrating basic surgical medical and therapeutic interventions to how to select the most appropriate evaluation procedures develop rehabilitation goals and implement a treatment plan Online you ll find narrated full color video clips of patients in treatment including the initial examination interventions and outcomes for a variety of the conditions commonly seen in rehabilitation settings *Advanced Technologies for the Rehabilitation of Gait and Balance*

Disorders Giorgio Sandrini, Volker Homberg, Leopold Saltuari, Nicola Smania, Alessandra Pedrocchi, 2018-01-30 The book provides readers with a comprehensive overview of the state of the art in the field of gait and balance rehabilitation. It describes technologies and devices together with the requirements and factors to be considered during their application in clinical settings. The book covers physiological and pathophysiological basis of locomotion and posture control, describes integrated approaches for the treatment of neurological diseases and spinal cord injury as well as important principles for designing appropriate clinical studies. It presents computer and robotic technologies currently used in rehabilitation such as exoskeleton devices, functional electrical stimulation, virtual reality and many more, highlighting the main advantages and challenges both from the clinical and engineering perspective. Written in an easy to understand style, the book is intended for people with different background and expertise including medical and engineering students, clinicians and physiotherapists as well as technical developers of rehabilitation systems and their corresponding human computer interfaces. It aims at fostering an increased awareness of available technologies for balance and gait rehabilitation as well as a better communication and collaboration between their users and developers. *Tetraplegia and Paraplegia* Ida

The Clinical Science of Neurologic Rehabilitation Bruce H. Dobkin,2003-01-16 The Second Edition of this single authored volume integrates multiple disciplines of basic and clinical research to help clinicians further develop the best possible care for the rehabilitation of patients with neurologic diseases From the readable descriptions of the structures and functions of pathways for movement and cognition the reader comes to understand the potential for training induced pharmacologic and near future biologic interventions to enhance recovery Dr Dobkin shows how functional neuroimaging

serves as a marker for whether physical cognitive and neuromodulating therapies work and how they sculpt the plasticity of the brain Themes such as how the manipulation of sensory experience can serve as a formidable tool for rehabilitation run throughout the text built from the level of the synapse to behaviors such as grasping walking and thinking From illustrating how we may one day repair the brain and spinal cord to how to retrain spared and new pathways Dr Dobkin draws insights from a broad swath of fundamental research to give clinicians tools they can translate into bedside practices The book treats the medical complications and therapeutic approaches to neurologic diseases as an interconnected matrix The management of common medical issues impairments and disabilities are described across diseases Special problems posed by patients with stroke myelopathies brain injury multiple sclerosis degenerative diseases and motor unit disorders receive individual comment Short term and delayed pulse interventions for patients along with clinical trials are dissected and put into perspective The First Edition of this book was titled Neurologic Rehabilitation The title has been changed to reflect Dr Dobkin s sense that fundamental research now drives the field of neurologic rehabilitation even more than it could in 1996 when the First Edition was published The Second Edition features entirely new chapters on functional neuroimaging of recovery neurostimulators and neuroprostheses integration into the book of many new clinical and neuroscientific observations relevant to the clinician and extensive updating and expansion of all chapters Readers whether clinicians serving the rehabilitation team or students or researchers in neuroscience neurology physical medicine allied health or bioengineering will acquire new insights and tools for creative pursuits that aim to lessen the disabilities of patients

Functional Electrical Rehabilitation Chandler A. Phillips, 2012-12-06 On one of my returns to California I attended the Disabilities Expo 88 at the Los Angeles Convention Center Among the various marvels of tech nology for the wheelchair disabled were stair climbing wheelchairs self raising and lowering kitchen cabinetry and even a completely accessible dude ranch experience At the same time as a guest of the Southern California Chapter of the National Spinal Cord Injury Association I was part of a small booth among the more than two hundred exhibitors in which we had spinal cord injured people up and walking with a lower extremity bracing system the reciprocating gait orthosis used at the PEERS Spinal Injury Program in Los Angeles I had a young man a C6 7 level quadriplegic walking with electrical muscle stimulation and lower extremity bracing The system is reviewed in Chapter 8 of this book As these disabled persons walked erect and upright among their wheel chair bound colleagues and took long confident strides past exhibits extol ling the latest technological virtues of yet another new wheelchair Fig 1 I reflected on the paradox of it all What a majority of these paralyzed people Wore really looking for was an alteration of their disability so that they could more normally function in an unaltered environment What the great majority of the exhibitors were offering was an alteration of the environment so that they could more normally function with an unaltered disability
