ISSE 2004 — Securing Electronic Business Processes Sachar Paulus, Norbert Pohlmann, Helmut Reimer, 2013-11-11 The Information Security Solutions Europe Conference ISSE was started in 1999 by EEMA and TeleTrusT with the support of the European Commission and the German Federal Ministry of Technology and Economics Today the annual conference is a

fixed event in every IT security professional's calendar. The aim of ISSE is to support the development of a European information security culture and especially a cross border framework for trustworthy IT applications for citizens, industry and administration. Therefore it is important to take into consideration both international developments and European regulations and to allow for the interdisciplinary character of the information security field. In the five years of its existence, ISSE has thus helped shape the profile of this specialist area. The integration of security in IT applications was initially driven only by the actual security issues considered important by experts in the field; currently, however, the economic aspects of the corresponding solutions are the most important factor in deciding their success. ISSE offers a suitable podium for the discussion of the relationship between these considerations and for the presentation of the practical implementation of concepts with their technical or organisational and economic parameters.

Building Trustworthy Semantic Webs Bhavani Thuraisingham, 2007-12-05. Semantic Webs promise to revolutionize the way computers find and integrate data over the internet. They will allow Web agents to share and reuse data across applications, enterprises and community boundaries. However, this improved accessibility poses a greater threat of unauthorized access which could lead to the malicious corruption of information.

Intelligent Non-hierarchical Manufacturing Networks Raul Poler, Luis Maia Carneiro, Thomas Jasinski, Marc Zolghadri, Paolo Pedrazzoli, 2013-02-05. This book provides the latest models, methods and guidelines for networked enterprises to enhance their competitiveness and move towards innovative, high performance and agile industrial systems. In the new global market, competitiveness and economic growth rely greatly on the move toward innovative, high performance industrial systems and agile networked enterprises through the creation and consolidation of non hierarchical

manufacturing networks of multi national SMEs as opposed to networks based on powerful large scale companies Network performance can be significantly improved through more harmonious and equitable peer to peer inter enterprise relationships conforming decentralized and collaborative decision making models Traditional hierarchical manufacturing networks are based on centralized models where some of the actors involved must adapt themselves to the constraints defined by those who are most dominant Real world experiences of such models have revealed some major problems due to the centralized vision of the supply chain and the sub optimal performance of centralized decision making For the current highly dynamic markets this generates major inefficiencies in operation throughout the supply chain This book collects the latest research regarding non hierarchical manufacturing networks and provides enterprises with valuable models methods and guidelines to improve their competitiveness
