Selecta Mathematica:

Selecta Mathematica, 1969 **Selecta Mathematica** Karl Menger, 2012-10-21 Karl Menger one of the founders of dimension theory belongs to the most original mathematicians and thinkers of the twentieth century He was a member of the Vienna Circle and the founder of its mathematical equivalent the Viennese Mathematical Colloquium Both during his early years in Vienna and after his emigration to the United States Karl Menger made significant contributions to a wide variety of mathematical fields and greatly influenced some of his colleagues The Selecta Mathematica contain Menger s major mathematical papers based on a personal selection by himself out of his extensive writings They deal with topics as diverse as topology geometry analysis and algebra as well as writings on economics sociology logic philosophy and mathematical results The two volumes are a monument to the diversity and originality of Menger s ideas [Invitation to Mathematics](#)

Konrad Jacobs, 1992-08-02 Based on a well received course designed for philosophy students this book is an informal introduction to mathematical thinking The work will be rewarding not only for philosophers concerned with mathematical questions but also for serious amateur mathematicians with an interest in the frontiers as well as the foundations of mathematics In what might be termed a sampler of the discipline Konrad Jacobs discusses an unusually wide range of topics including such items of contemporary interest as knot theory optimization theory and dynamical systems Using Euclidean geometry and algebra to introduce the mathematical mode of thought the author then turns to recent developments In the process he offers what he calls a Smithsonian of mathematical showpieces the five Platonic Solids the Mbius Strip the Cantor Discontinuum the Peano Curve Reidemeister s Knot Table the plane ornaments Alexander s Horned Sphere and Antoine s Necklace The treatments of geometry and algebra are followed by a chapter on induction and one on optimization game theory and mathematical economics The chapter on topology includes a discussion of topological spaces and continuous mappings curves and knots Euler s polyhedral formula for surfaces and the fundamental group The last chapter deals with dynamics and contains material on the Game of Life circle rotation Smale s horseshoe and stability and instability among other topics **Selecta Mathematica I** Karl Menger, 2016-12-13 Karl Menger one of the founders of dimension theory is among the most original mathematicians and thinkers of the twentieth century He was a member of the Vienna Circle and the founder of its mathematical equivalent the Viennese Mathematical Colloquium Both during his early years in Vienna and after his emigration in the United States Karl Menger made significant contributions to a wide variety of mathematical fields and greatly influenced many of his colleagues These two volumes contain Menger s major mathematical papers based on his own selection from his extensive writings They deal with topics as diverse as topology geometry analysis and algebra and also include material on economics sociology logic and philosophy The Selecta Mathematica is a monument to the diversity and originality of Menger s ideas [Number Theory](#) David Chudnovsky, Gregory Chudnovsky, Melvyn B.

Nathanson, 2011-06-27 This volume marks the 20th anniversary of the New York Number Theory Sem inar NYNTS The

seminar began to meet in the Spring 1982 semester at the CUNY Graduate Center in midtown Manhattan and has been meeting continuously at the Graduate Center for two decades even as the Graduate Center moved from its original location on 42nd Street near Fifth Avenue to temporary quarters in an office building next to Grand Central Station to a new and elegant building in the former B Altman department store on Fifth Avenue between 34th and 35th Streets. The seminar was originally organized by Harvey Cohn David and Gregory Chudnovsky and Melvyn B Nathanson. In 1982 Harvey Cohn was at City College CUNY and the Graduate Center the Chudnovskys were at Columbia and Mel Nathanson was at Rutgers. Today Harvey has retired to California the Chudnovskys are at Polytechnic University of New York and Nathanson is at Lehman College CUNY and the Graduate Center **Selecta mathematica [electronic journal]**. ,1993 Collected Papers

Bertram Kostant, 2009-08-15 For more than five decades Bertram Kostant has been one of the major architects of modern Lie theory. Virtually all his papers are pioneering with deep consequences many giving rise to whole new fields of activities. His interests span a tremendous range of Lie theory from differential geometry to representation theory abstract algebra and mathematical physics. Some specific topics cover algebraic groups and invariant theory the geometry of homogeneous spaces representation theory geometric quantization and symplectic geometry Lie algebra cohomology Hamiltonian mechanics modular forms Whittaker theory Toda lattice and much more. It is striking to note that Lie theory and symmetry in general now occupies an ever increasing larger role in mathematics than it did in the fifties. This is the first volume 1955 1966 of a five volume set of Bertram Kostant's collected papers. A distinguished feature of this first volume is Kostant's commentaries and summaries of his papers in his own words Neutrosophic Sets and Systems, vol. 73/2024 {Proceedings of the "Mediterranean Conference on Three Decades of Neutrosophic and Plithogenic Theories and Applications" (MeCoNeT 2024)} } Florentin Smarandache, Mohamed Abdel-Basset, Giorgio Nordo, Maikel Leyva-Vázquez , 2024-12-01 This volume contains the proceedings of the Mediterranean Conference on Neutrosophic Theory MeCoNeT 2024 held at the Accademia Peloritana dei Pericolanti of the University of Messina on September 24 25 2024. The event was organized by the MIIFT Department Mathematics Computer Science Physics and Earth Sciences of the University of Messina marking the first international congress on neutrosophic theories outside the Americas. This milestone has firmly established the Mediterranean region as a key hub for research in the rapidly growing field of neutrosophic theory. The MeCoNeT 2024 conference drew over 100 participants from more than 15 countries with more than 50 scientific contributions selected through a rigorous peer review process. The hybrid format of the event featuring in person sessions at the historical Accademia Peloritana dei Pericolanti and online parallel sessions allowed for broad international participation. The conference thus offered an ideal platform for sharing interdisciplinary research and addressing contemporary challenges in mathematics and beyond **Issues in General and Specialized Mathematics Research: 2012 Edition** ,2013-01-10

part of the activities of World Mathematical Year 2000 It consists of 28 articles written by influential mathematicians

Discrete Stochastics Konrad Jacobs,2012-12-06 Discrete stochastics is the theory of discrete probability spaces This undergraduate textbook gives a concise introduction into discrete stochastics in general and into a variety of typical special topics in this field such as information theory fluctuation theory and semigroups of stochastic matrices The emphasis lies on probability theory rather than on statistical methodology Motivations interpretations and numerous examples and exercises relate the mathematical theory to stochastic experience *Moonshine, the Monster, and Related Topics* Chongying Dong,Geoffrey Mason,1996 This is the proceedings of a Joint Summer Research Conference held at Mount Holyoke College in Jun 1994 As perhaps the first conference proceedings devoted exclusively to the subject known as Moonshine this work contains something for many mathematicians and physicists Many of the results featured are not available elsewhere
