**The Semantics of Relationships** R. Green, C.A. Bean, Sung Hyon Myaeng, 2013-04-18 The genesis of this volume was the participation of the editors in an ACMISIGIR Association for Computing Machinery Special Interest Group on Information Retrieval workshop entitled Beyond Word Relations Hetzler 1997 This workshop examined a number of relationship types with significance for information retrieval beyond the conventional topic matching relationship From this shared participation came the idea for an edited volume on relationships with chapters to be solicited from researchers and practitioners throughout the world Ultimately one volume became two volumes The first volume Relationships in the Organization of Knowledge Bean Green 2001 examines the role of relationships in knowledge organization theory and practice with emphasis given to thesaural relationships and integration across systems languages cultures and disciplines This second volume examines relationships in a broader array of contexts The two volumes should be seen as companions each informing the other As with the companion volume we are especially grateful to the authors who willingly accepted challenges of space and time to produce chapters that summarize extensive bodies of research The value of the volume clearly resides in the quality of the individual chapters In naming this volume The Semantics of Relationships An Interdisciplinary Perspective we wanted to highlight the fact that relationships are not just empty connectives Relationships constitute important conceptual units and make significant contributions to meaning

Egenhofer, Christian Freksa, Harvey J. Miller, 2005-01-11 This section gives a description of notions used throughout this study Current achievements in developing action centered ontologies are also discussed 2 1 Ontologies In the context of information extraction and retrieval different kinds of ontologies can be distinguished 15 Top level ontologies describe very general concepts like space and time not depending on a particular domain Domain ontologies and task ontologies describe the vocabulary related to a generic domain or kind of task detailing the terms used in the top level ontology Application ontologies describe the concepts that depend on the particular domain and task within a specific activity Several investigations have been conducted to bring actions tasks to bear on tologies Among them are Chandrasekaran et al 6 and Mizoguchi et al 23 in the fields of AI and Knowledge Engineering For the geospatial domain Kuhn 21 and Raubal and Kuhn 26 have attempted to support human actions in ontologies for transportation Acknowledging the importance of human actions in the geographic domain a research workshop was held in 2002 bringing together experts from diff ent disciplines to share the knowledge and work on this issue 1 Camara 5 one of the workshop participants has proposed that action driven

spatial ontologies are formed via category theory for the case of emergency action plans

Alan Cruse,2004-01-22 Cognitive Linguistics argues that language is governed by general cognitive principles rather than by a special purpose language module This introductory textbook surveys the field of cognitive linguistics as a distinct area of study presenting its theoretical foundations and the arguments supporting it Clearly organised and accessibly written it provides a useful introduction to the relationship between language and cognitive processing in the human brain It covers the main topics likely to be encountered in a course or seminar and provides a synthesis of study and research in this fast growing field of linguistics The authors begin by explaining the conceptual structures and cognitive processes governing linguistic representation and behaviour and go on to explore cognitive approaches to lexical semantics as well as syntactic representation and analysis focusing on the closely related frameworks of cognitive grammar and construction grammar This much needed introduction will be welcomed by students in linguistics and cognitive science Logic and the Organization of Information Martin Frické,2012-02-09 Logic and the Organization of Information closely examines the historical and contemporary methodologies used to catalogue information objects books ebooks journals articles web pages images emails podcasts and more in the digital era This book provides an in depth technical background for digital librarianship and covers a broad range of theoretical and practical topics including classification theory topic annotation automatic clustering generalized synonymy and concept indexing distributed libraries semantic web ontologies and Simple Knowledge Organization System SKOS It also analyzes the challenges facing today s information architects and outlines a series of techniques for overcoming them Logic and the Organization of Information is intended for practitioners and professionals working at a design level as a reference book for digital librarianship Advanced level students researchers and academics studying information science library science digital libraries and computer science will also find this book invaluable *Decision Support for Construction Cost Control in Developing Countries* Pettang, Chrispin,2016-03-08 The continued growth of emerging nations depends largely on the development of their built infrastructures and communities Roads dams bridges hospitals schools and housing are all examples of the built environment that impacts economic improvements in the developing world Decision Support for Construction Cost Control in Developing Countries explores how the construction industry contributes to a nation s GDP and the related cost issues and proposed cost reduction solutions for construction projects and initiatives in developing regions Emphasizing the role of decision support systems for reducing and managing the costs associated with construction projects this title is an essential reference source for civil engineers business and engineering managers project managers researchers and professionals in the construction industry Constructing Professional Discourse Concepción Orna-Montesinos,2012-01-17 This book explores the fascinating

role that language plays in the construction of non verbal objects by mapping out the ontological meaning of the specialised concepts and the domain specific knowledge embedded in them In doing so it provides a comprehensive linguistic insight into the discourse of professional domain specific communities and hence into the communication practices and procedures of those communities In this respect the book offers a response to the claims made by many of the most influential applied linguists today such as Vijay Bhatia 1993 2004 John Swales 1990 2004 or Ken Hyland 2002 among others who have consistently defended the need for applied linguistic research into the textual generic and social perspectives on the under researched interrelatedness of the discoursal and professional practices of a discipline Specifically this book provides readers with an integrative multi perspective approach to the study of professional domain specific discourses While it mainly draws on the tenets of genre theory and discourse semantics it also nurtures from the theoretical and empirical foundations of applied linguistics cognitive linguistics corpus linguistics and ontological engineering The book starts from the analysis of domain specific texts as final written products with specific lexico grammatical semantic and rhetorical features to later enquire into the written products as textual artefacts closely linked to the social context of production and interpretation of the text This integrative approach provides fresh new insights into the way the processes of writing are affected by the community specific institutional and socio historical circumstances in which domain specific texts are produced
